Sorry, after I posted this I thought I was going to have time to get
on, but I got tied up on a few things, but i will be on tommorrow
starting around 8:00 or 9:00 am to around 9:45am (all CST) and then
around noon to 4:00 pm (again CST). With the computers down, were
having to play the music manually.

Just because you and Steveo can see turds when you look into mirrors, doesn't mean the rest of us are going to. CB'ers were meant to see turds when they look into mirrors. Shitty operators means shitty CB service.

Really, CB is a dead-end street, if you want to process further than the rules allow, you have to be illegal. On ham radio you can do lots of things legally. Learn CW, make something of your self. Don't be a loser all your life.

No matter what facet of radio you enjoy, the topic is to protect it by improving the quality of the hobbiests involved. That's why most will agree if you know morse code, you'll be a better skilled hobbiest and will improve your nich of the hobby and/or radio service you're involved with. A valuable knowledge base for those of coming into the services and hobby.

Tnx, 73 Good luck in the contest.

We'll have to see how it plays out, but when you have a pack of liars that don't have a problem dragging down the country in every way they can the democrats might be able to bullshit alot of the ignorant in the country. They govern by feeling. Symbolism over substance.

Yes, I heard it this morning. Quite strong too. Didn't hear it this afternoon, but it might have been there, I didn't listen real hard, didn't have time. It sounds like you might be a little off 13.556, no more than about 110 Hz but it's still noticable on ssb.

1) Call early and call often to the power company. The squeaky wheel
gets the grease. Call daily. Don't give up.

2) Send a letter to the FCC, saying that they are interfering with local
AM broadcasts (just eyewash, as they won't respond very rapidly), but cc
it to the power company (this is the important part, hopefully gets
their attention).

3) Don't know where you live, but it's getting around hunting season. Go
to a nearby bar and ask "Anybody here a good shot? Twenty bucks to the
first guy that hits that light".

(just kidding on point 3---or not) ;-)

My god, I think I'm actually conversing with a cartoon character.

How can you be so dense? 9/11 happened on Bush's watch. You are
seriously deranged. Climb back into Bushie Comics and enjoy yourself.
Let the grown ups discuss important matters.

All due to the shenanigans on Klintoons watch. Please try to pay attention,
'tard boy, as history did not begin the day George W. Bush took office.

I was in Pearl from 73-77. I suppose I would have near 35years in now
if I stayed. We sailed home from South China Sea in March of 75 just
a few days before Saigon was taken over and those poor marines were
nearly forgotten on the rooftop of the embassy building. It certainly
was an interesting time of my life. I made many good friends and still
keep in touch with some of them. When you see places in the world so
very different from good old USA then you realize how lucky we are to
have such a good life here. I am glad that things seem to have settled
down in that corner of the world and I hope that we will see the middle
east in the same light in a short time.

Forgotten? Hardly. It was a large armada of ships that rescued thousands of folks and it was known as 'Operation Frequent Wind'.

Yes, it was a major operation. I think in the early hours of the 30th
there were a half-dozen or so marines left on the rooftop of the
embassy. IIRC They had to hang around for a copter to pick them up -
they were nearly forgotten. No?

Maybe it was just perceived by the guys on the rooftop that they were forgotten - or perhaps some liberty that hollywood has taken in portraying events.

Anyway here is a link to an interesting viewpoint told by a cpo on board the Hancock. I recognize many of the ships in the operation and as I said the ship I was on - USS Whipple DE1062 - had just left the area a few weeks before. I recognize many of the ships as either having operated with them or them being stationed in Pearl. One of my good friends who I see from time to time was on the Benjamin Stoddart. Another on the Vega.

I had a problem in San Antonio with an offending AM station. It just took a call to three 50K AM staions (KMOX, WOAI, & KWKH) and complained that I will now have to stop listening to them because of the interference. 2 days later that problem was solved by the FCC citing them for being off frequency to the tune of 25K fine. It will be solvd if you do what I did. You can also file a complaint with the FCC, but it may take a year to get results, but they will get the results for you. You can also contact the ARRL compliance division and they will also help. Greg

1728. Bouquet to Passport

Newsgroup: rec.radio.shortwave
Date: 2006-11-16 02:28:07 UTC
From: John Plimmer <plimmer@nospamtelkomsa.net>
Message-ID: <ejgibn$e9k$1@ctb-nnrp2.saix.net>
Source record: 97666

Today out the blue I received in excellent condition a brand new free complimentary copy of Passport to Worldband Radio 2007.
Seems like their Jane Evans got wind of the fact that my original copy got dropped from the Boeing at 30,000 ft when it passed over Montagu - mwa Afrika's idea of speeding up airmail deliveries. Sadly it was graunched beyond belief and was difficult to read.

So a big bouquet to Jane and Passport for this friendly and unexpected customer service, much appreciated here.

I cannot understand why the many queries that come into this newsgroup don't buy themselves a copy of Passport, as for twenty bucks it is a bible of useful information for radio hobbyists, especially newness. It's got everything worth looking at from the fifty buck radio's and simple antenna's right up to excellent reviews of the heavyweight $4k serious tabletops. An outstanding buy and good value for what you get, written by highly experienced professionals.

I have bought a Passport every year for years. I refer to it all the
time scanning the bands. All kinds of good information in it about SW
radio stations, schedules, mail addresses and contact information,
reviews and useful advertisements for equipment.

I guess I'll breakdown and get a copy again. I haven't bought one in
years, however, I used to get Monitoring Times and they had fairly
decent listings for SW schedules among other things. I really do need
to get a reference considering all the stations I run across that I
can't identify. I'd probably waste the money on ice cream anyway!!
Which vendor/outlet is the best to order from?

You know, CW may be obsolete, but having to learn the code instilled a bit of discipline and sense of purpose in getting a ham license. Of course things like mathematics, science and such that require mental discipline are no longer politically correct so are generally not required in education today because we certainly don't want to bruise anyone's ego or tax their MTV indoctrinated brains. So, I guess the code will have to go.

It isn't so much the "code" being removed which has dumbed it down, it used to be you "had" to know electronics to get a license. Blame it on the Study Guides which really don't teach SHIT.

Personally, instead of seeing this CODE argument going on forever and not solving a damned thing, using the above post of the other necessities of life - if you intend to get anywhere - let's argue - and understandably so and more welcome than the code argument - why the classes are being dumbed down for our kids! Around here, the schools are wanting to build near professional sports arenas and I'm speaking "millions of dollars" - for the "Football" games - to hell with the studies. They "used" to give you basic supplies when you went to school, now you buy your own. The "School Board" seats are more hotly contested than some of the "State and Local" government seats. Yet the education level isn't improving.
No child left behind? Eh, not if they're foot ball players. IF NOT - they're screwed.

Just my 2 cents.

San Francisco has somewhat better AM ratings and worse FM ratings than
most areas and this is frequently blamed on the hills. A few FM
stations have transmitters near both San Francisco and San Jose.

Of course, Montreal certainly has hills, most notably the hill after
which it;s named.

I don't believe you, that weight is with batteries. As a repacked
S350, it only weighs 1 pound, as the spec. sheet states. The 12-150 is
still a cheap piece of shit, with switches that don't work, and a
kludgy tuning dial - I can smell crap from a mile away !

I know this is getting OT, but I agree. Ever see the stats on what the
school board people and administrators get paid compared to teachers?
Ever look at the ratio of school board administrative staff to
teachers? In New York some years ago investigative reporting indicated
that there were approximately 7 administrators per teacher and most had
"company" cars. Now we know where the money goes and why real
education doesn't matter.

Seems to be an ongoing process. Commercial stations aren't immune either. DXers are only half-joking when they ask "would the last AM engineer in Canada please turn off the lights"...

> The amusing thing is that here in Montreal, when CBC AM (now renamed

Thing is, with AM they have a fair signal everywhere but don't have a real blasting signal anywhere. With FM they don't have the same areal coverage, but in the areas the FM *does* cover it gets through the various noises a lot better. My workplace is only about 10 miles from the 50kw WSM-650 transmitter but we have difficulty getting a clean WSM signal inside the building. A 1kw FM at the same site would be a lot easier to reliably receive.

In a couple of cases in the Prairies, they've been building modestly-powerful FM transmitters in the major cities while leaving the associated AM transmitters on the air. There's been an 820-watter on 102.5 in Regina for several years (// 540 CBK); they've recently added stations in Winnipeg (2.8kw, 89.3 English/90.5 French); Saskatoon (94.1/4.1kw, English only); Calgary (99.1/1.1kw, English only); and Edmonton. (3.9kw; 93.9 English/101.1 French) In all of these cases the FM of course doesn't come anywhere near duplicating the AM coverage, and they plan to leave the AMs on the air.

Because of the lighter population densities I don't expect they'll ever shut down the big AMs on the Prairies. I do kinda half expect CBU/Vancouver will flip eventually and am surprised they aren't doing more FM conversions in NL. (the N part, as they do seem to have already flipped them all in the L part)

It came out in '76, and the MSRP (at that time) was $3400.00,
$1,400.00 less than what he's asking now. It was, and is, a good
receiver, but had/has rotary switch problems. I used one (not mine,
but a buddy of mine had one he bought while in Japan, at a much, much,
much lower price than the US MSRP was) and I really liked it.

BUT, if you've got that kind of money to spend, there are a lot of
current high end communications receivers that will out-perform this
one. Anyone spending that kind of money for this type of a receiver
without seeing it, and testing it, has got to be a couple cans short
of a six-pack.

Just my views, YMMV.

CIAO!!

Today out the blue I received in excellent condition a brand new free
complimentary copy of Passport to Worldband Radio 2007.
Seems like their Jane Evans got wind of the fact that my original copy
got
dropped from the Boeing at 30,000 ft when it passed over Montagu - mwa
Afrika's idea of speeding up airmail deliveries. Sadly it was graunched
beyond belief and was difficult to read.

==========

Good for you John. and, thanks to the people at passport. who said the
people in the industry don't read this newsgroup? even with the slow
trolls,
it's nice to know this group is read. i remember Universal radio doing
the right thing after reading a post on this group awhile back. BTW, I
never missed an issue, and have read them for too many to remember.

Father Michael.

From: r2000swler@hotmail.com
Message-ID: <1163680155.249874.203990@h48g2000cwc.googlegroups.com>
Source record: 97687

I am not into LW or MW but a friend who is a new SWL is.
He found two very usefull additions to his R2000 and wire antenna
setup.
<http://www.kongsfjord.no/dl/Antennas/MW%20Filter%20no3.pdf>

<http://www.bobsamerica.com/swl>
or<http://us.geocities.com/amdxlog/index.html>

The first unit was designed by Dallas is for MW but Will made some
simple changes, larger, (more inductance) colis and it works very well
down to ~100KHz. It needs some refinement for such a junp in design
frequency but it is very good at rejecting off channel RF.

The last 2, same info just different web pages by Robert Betts, work
very well as a preselctor also. While Robert uses a MMIC, I found that
Lankford "Ultra linear amplifier" to work much better as in no IMD
issues.
<http://www.kongsfjord.no/dl/Amplifiers/Ultralinear%202N5109%20And%202N3053%20Amplifiers.p
df>
I also found that for most, 99%, an amplifier is not needed and if I
where
going to build one, I would build it test it and only add the amplifier
if needed.
Guy in the pacific NW might well use an amp, I suspect that for most of
the
rest of use the local noise floor will obviate the need for an amp.

For operation from 100KHZ through 30MHZ the Betts desing is very good.
However if onc is concentrating on MW and LF then Dallas' design is the
hands down winner. Will has both. And I thoguht I was nuts.

Will is also experimenting with Dallas' "Phaser" to allow a synthetic
steerable
antenna. Note don''t add the vernier yet, Dallas told me it might need
some
change. The basic unit is easy to build and offers excellant
performance. A
little touchy without the vernier, but a very nice unit. It even works
very well built
as a bread board.

While Dallas suggests using matched antennas, Will is using presently
mismatched
antennas, one modified North Country that consists of 2 NC singled
ended antennas
wired for dipole operation simliar to Dallas' active dipole and one

true Lankford active
dipole. There are significant differences and the NC is very prone to
overload and IMD
issues. The Lanford active dipole has no detectable IMD in from my 2
local problem
stations, 770KHz and 1240KHz. The 1240 station is 3 times as far from
me as the
770, but they sure are a good test! At some point in the near future I
hope to have
4 complete Lankford active dipoles to improve phaser performance. A set
for Will
and a set for me. I do get some grunge from LORAN C at 100KHz, but I
think that
is an receiver issue. Will is experimenting with combinations his wire
antenna
and either dipole. Every combination works, but using the 2 dipoles
works best for
him.

I am not used to being able to steer an antenna on HF to peak, or more
likeley null
RFI, a signal.

Terry

In my dealings with are locla arc and spark, er I meant RECC,
Blue Grass Energy or whatever their name is this week, the only
time I have ahd any success was when I brought me being a licensed
radio operator. I wasted 2 yeas argueing with them before mentioning
in passing that I was a ham. They were out that afternoon and
changed out an offending street light. Given the modest requrements
to get a ham license, and the minimal expense, it might be well
worth the time, effort and money.

I still discribe myselff as an SWL who happened to pick up a ham
license more by accident then design. Except to the power company
when I become a vital member of the emergency communication
system for the state of Kentucky.

Barf, but it works.

Cheaper then paying the guy 20$ to take out the light, or the several
K$
for a legal defense or fines.

If someone was collecting old luggable radios then who's to say what the value of filling a hole in a collection is. As with a postage stamp showing an upsidedown airplane on the front if you gotta have it then the sky's the limit.

As a radio for listening it's probably worth $150.00 if in excellent condition with manuals. The same as it's refrigerator sized cousin the RF9000. Otherwise I would spring for a new E1 annd get a much wider range of features and a better radio.

Quoting: "Berners-Lee said he feared that if the Internet was left to
develop unchecked, "bad things" could happen. He wants to set up a
Web science research project to study the social implications of the
Web's development."

Huh...??? The web was by design built to be open and the
specifications were distributed by his group for free. End users and
their applications that cause problems are more of a law enforcement,
federal security, diplomatic and military issue at this point. Why is
he suddenly concerned about only the web spreading misinformation and
undemocratic forces when there are so many other venues that have been
doing the same thing.

Excellent info Terry. I am using a similar arrangement for LW signal enhancement but plan to take some ideas from the designs you presented. I use a heavily modified Grove Tune 3 passive preselector. I have modified the LW/MW coils and employed better output impedance matching. I am presently experimenting with an old Ralph Burhans LW preamp circuit with input low pass filter which works very well also. I am finding that the whole trick to LW reception with an end fed wire antenna (assuming the wire is at least 120' or more) is the impedance matching to the coax (so what else is new!!!) since the antenna is in the tens of K ohms at LW. A significant improvement in reception is realized if the antenna is 250 feet long and of course if you can get more than this it's even better. When I was in S. CA I had two 1/2 mile long wire antennas that stretched over bushes and the ground into the local national forest. LW reception was utterly phenomenal, however, the wires were directional primarily off the ends (Beverage effect?), hence I had one running N/S and one E/W. Since my lot here is only 1 acre I must suffice with 250 feet. I am, however, seriously eyeing the nearby wash as a possibility. I'm also considering a large horizontal wire loop around the property lying on the ground. Any comments on the latter idea would be appreciated.

I have always had major problems with antennas longer then 100 to 150'.
The strong out of band MW signals even cause a R390 front end to fold.

Have you considered a low pass fitler to reject everything above
~500KKHz
before your tuner?

And as Burhans pointed out a "good" active antenna can often match a
long wire.
Will is having much better succes with his active antennas then the
~100'
long wire.

One winter, 1977-78 we had enough snow to last a lifetime. After 3
weeks with
3' of snow on the ground I gave up trying to erret a new antenna, I had
just gotten
married and had NO antenna. So I laid about 100' of #18 and it worked
fairly welll.

Let me do some more thinking.

Terry

Regarding testing for a ham license, I think that is a good idea. I
just think we should be testing for skills that show some ability by
the operator to set up and operate a rig safely. And we should test
his ability to communicate effectively and courteously in a widely
used form of communication that can be understood by emergency
responders: voice.

I don't know about your area, but mine has two distinct tracks for
kids. Those that are headed for a college education receive various
levels of advanced classes based on ability (more or less). Those that
are on the vocational track receive math and english at a level to get
them past NCLB requirements and the equivalent of shop classes. The

stadiums are for the most part outdoor with bleachers looking over a multipurpose playing field that has a running track around it. And this is one of the higher income areas of the country.

I do agree that sports in high school and college can be taken to absurd levels of importance. In many locations, especially urban ones the high school is essentially a farm club for colleges which are a farm club for major league sports. I would love to see the system taken back several notches but there is too much money at stake for that to happen.

Last night I listened to WGN's Milt Rosenberg who interveiwed an author and they discussed the far Left Socialist George Soros plan for the U.S.

http://wgnradio.com/shows/ex720/list.htm
"Many observers of American society have observed that the traditional family is in decline. With divorce and single parenthood on the rise, how can the American family be preserved? We will be examining this question tonight with two representatives of the Howard Center for Family, Religion and Society. ALLAN CARLSON, president of the Howard Center, and GEORGE MARLIN, chairman of its board of directors, will both be on hand to analyze the current state of the American family and offer some strong prescriptions for its ills."

He said that Soro's plan is to create a far Left third party to play it off of the Republicans & Democrates. He wants to threaten the two party system by forcing Democrates to align themselves with his far Leftist Socialist agenda or risk losing the 2008 election.

His Socialist agenda is the same as what is occuring in Europe today. In short, the result is the displacement of native Europeans by M.E. immigrants evolving into the Islam-0-facist state of EUraqistan.

Watch out for this Neo-Kommie!!!

It would be much better if the schedule section were available in an
electronic form on the internet which is updated regularly. As it currently
stands, in static print, it becomes outdated within months.

You know nothing about Liberalism in the 1700's. You are regurgitating
Neo-Kommie propaganda.

Left-wing,Neo-Liberals,"Progressives",Socialists,Islam-0-Facists =
Neo-Kommies

During Communist China's Cultural Revolution "Rightists" were murdered by
their "Neo-Liberal" sons and daughters.

WRTVH used to have a similar publication that addressed the "other"
half of the year, with a similar graphic format - but they discontinued
that about 3 years ago, and - oh well...

At least EiBi updates regulary - and it is a more than satisfactory
substitute, and free at that.

David Fenton, founder of Fenton Communications

He began his "journalism" career as a photographer and media specialist for the Liberation News Service, which was named in admiration of and loyalty to the National Liberation Front of South Vietnam. The anti-American, Communist movement Fenton and his colleagues emulated called for the "overthrow [of] the camouflaged colonial regime of the American imperialists and the dictatorial power of Ngo Dinh Diem...

...wanted to launch a race war in America, to hasten the Armageddon in which the Third World would wreak its revenge on the "Amerikkkan" beast.
...
He was recruited to shape and mold the public perceptions of Communist-led governments and Marxist guerillas alike. The year 1986 found Fenton in the throes of the Communist-led Angolan government's Bureau of Information and Propaganda. He was hired to sully the reputation of a right-wing rebel group that the Angolan Communists had been fighting against for years. Fenton did similar public relations work for Nicaragua's Sandinistas. The Communist-backed Sandinistas regarded themselves as integral to a proletariat revolution in Nicaragua. To this end, Fenton provided necessary guidance in the public relations department in an effort to sway favorable opinion about this Marxist faction. Rounding off his Communist ties, Fenton conducted media services for Grenada's Prime Minister, Maurice Bishop. Bishop was a staunch supporter of Fidel Castro and his Marxist government in Cuba, and sought to repeat that government's philosophy in his own homeland.

...
In recent years, Fenton has expanded his clientele, which now includes antiwar and anti-Bush groups. Trevor S. Fitzgibbon, Director of Media Relations for Fenton Communications, assists in the public relations strategy for MoveOn.org, MoveOn.org Voter Fund, and Win Without War. According to Fenton Communications, "Fitzgibbon's messaging and PR efforts on behalf of MoveOn.org have helped position the online advocacy group as a national political force in American life." Arlie Schardt, a senior consultant at Fenton Communications and chairman for Environmental Media Services, served as Al Gore's national press secretary during his first presidential campaign.

Funds are channeled through billionaire George Soros' Open Society Institute

The radical Left owes a great debt of gratitude to David Fenton. He has mixed Neo-Marxist ideology with junk science, trial lawyers, labor, progressive millionaires, politicians, and radical policy wonks to construct a complex, moneymaking left-wing advocacy empire. Fenton Communications reported billing $6 million dollars in 2002, and will likely make much more this year with high profile clients like The Heinz Family Foundation, the aforementioned Open Society Institute and Moveon.org.

It is, nonetheless, a very interesting read, encouraging that the VoA has had such a positive influence, and one can only hope that every shred of what he predicts will come about, sooner than later. On top of that, assuming the discussion reads word for word, he seems like a truly decent, whole-souled sort of guy.

The fact that you don't believe it doesn't change the fact that my 12-150
weighs in at 4 lbs 11 oz without batteries.

And once again, I'm happy with both the 12-150 and the S350DL.

I use it just about every day. The big difference between the Candle and the S350DL is the sound. The Candle will receive most of the stations that the S350DL does, but the background noise is much more noticeable in the Candle on AM.

It does hold sentimental value, and that's the main reason I'll hold onto it.

>

Regarding the "education". They teach "some" college level prep classes. As to those with lesser ambition/grades, they have "classes" - period. There is "Vo Tech" - but you had to have a certain grade average to get in "there". As to shop, one school I know of - sold all their shop equipment years ago - that being the same school "I" went to and got my start in electronics training. I've never heard much of other schools having "shop" class around here. The "stadiums" at some of these schools here reach into the "millions" of dollars, upping the taxes on all who live there. Those stadiums are damned close to being equivalent to a "Pro" Field. Hell, our local "state" University doesn't even match some of them. That is pathetic. Yes, kids need sports to teach sportsmanship and competition, but come on - "EDUCATION" being "reading, writing, arithmatic" and so on are more important. AND as I said, they fight for school board seats hotter than some local and state government races. It is "sickening".

They've eliminated the "Wood, Electronics, Metal (including welding) and Electrical" shops here. Now, I realize "Electronics" may not be as hot to some as it once was, but it still has value in our country. So too does "Electrical" systems/wiring, "Welding", etc. Do we not need "skilled" labor

anymore? No wonder this country is going to hell. Pretty soon all other countries will out smart us in every field. Those who were pushing "no child left behind" - need to get things back on track for "develpment" of "marketable" skills."
We're still going to need things wired, welded, soldered, electronics to mainain the "cell phone craze" and so on.

I realize most parents are working and unlike the past - at least one parent made sure we did our chores, studying and so on..... things have changed dramatically. They need to change dramatically again. Get these kids interested in something. Even computers seem to be falling out of grace with a lot of them - aside from chatting. I guess they equate computers to "work".

I still don't believe you - the S350 only weighs on pound and the
12-150 is a repackaged S350, so there is no way - you just keep
forgetting to take the batteries out. My $25 RS PLL AM/FM radio is just
as sensitive as the over-hyped S350, which I happily returned to RS,
The S350 suffers from drifting, images galore, is cheap plastic, has
cheap switches, has a smelly imitation-leather handle, an a bunch of
switches that are all hype and cheap, a plastic speaker grill, an
antenna that flops and doesn't lock into place, and a low-resolution
display - the list goes on and on ! The 12-150 is just like the cheap
piece of shit SRIII - I read a review on eham.net that the 12-150's
wide/narrow switch shorted out and the reado is no better than standard
AM/FM radios. The SRIII's switched fall off ! Enjoy, sucker !

And THIS is exactly why I think the BBC are bunch of idiots for slowly dismantling their shortwave networks.

What's to stop the USA from eventually doing the same thing. As it is, only select World Service programs are relayed on local FM transmitters - and most of that is done on the overnight hours - as filler.

Steph

The S350 series is a fine radio for the money and it does what it was intended to. Which is to provide good sounding audio from stations broadcasting on AM, shortwave and FM on a radio that is designed for straightforward operation using no superfluous controls.

How does the AM and FM performance on the 12-150 compare with the Grundig.

The more you post about this, the more you look like a fool.

How can a radio that has synthesized tuning be an S350 that has
analog tuning?

The S350 has analog tuning, and a frequency counter readout. That's
where at least some of the celebrated drift comes from.

But according to Radio Shack (and various people's comments about
the tuning steps) the 12-150 has synthesized tuning.

That is a pretty blatant difference.

ANd once they make that sort of "mod", there is little reason to
even believe there is anything in common between the two radios.

You should have stuck with the line about how they are equally bad,
because whether or not that is true, it's more true than claiming
the radios are the same.

Don't think the 12-150 covers shortwave. Probably accounts for it's
poor performance on those bands....!!

The 12-150 is just a repackaged SRIII - I guess, we live in a
throw-away society ! Most receivers these days are junk, and made in
China ! Bring back the RS DX-440 and Sony ICF-2010 ! The S50 is total
garbage - take off the back, and see that it is mostly-hollow inside
and the whole receiver is a cheap low-grade plastic ! When I opened, my
now returned to RS S350, some little washers fell out and I could not
figure where they went - some poor suck probably has that radio now !
The S350's electronics are 1960's grade.

Mark,

I'm not saying that you are wrong and I would be really happy if the Republicans put all their millions in to trying to influence American voters (they sure as hell won't fool the rest of the world) via Usenet. But let's be realistic here what idiot would be influenced by the political junk we see in this group and, by inference, on the rest of Usenet. The right wing rubbish I see here makes me ashamed of the slightest intolerant thought that I have ever had.

I really doubt that any organisation is behind the neo-nazi rubbish that we often see here - it's just a bunch of sad losers whose nappies need changing:)

Charlie.

This same, ultimately divisive and boring, argument has been going on for long enough! I know many things that kids today will never know and they know things that I am not likely to learn.'Twas ever so! I have a head full of valve circuits and valve design abilities that are redundant - should I waste my life complaining?

Morse code is just another efficient means of communication and let's hear it for those turned on by it - credit to them :) Morse code is not a means of dividing up the world into us and not us.

Amateur radio is faced with a number of real threats as western governments deregulate the HF bands or, more likely, abandon them. We can't afford to loose people - we need to join together to preserve a very worthwhile pastime!

Charlie.

Well, it looks like the squeaky wheel analogy proved true The utility company was out just before dark and fixed it right up. I only wish it was my only noise problem here, but every bit helps, and most interference I'm able to null out. I certainly appreciate all of your suggestions and wish you all good dx.

I'm sorry, that wasn't nice of me to say. I'm happy you've got to live a full life. I won't get that opportunity. The liberals are going to get us killed, I won't have a chance at getting old.

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.

Right, That why there is CB. You don't have to know how it works you just
get on it and act stupid. We can't have ham radio be like that, we want
skill. Quality, not quantity.

I know a lot of you don't like that because it means more work, but we get
a higher quality operator.

I've used an LF Engineering L-400B active whip in the past and it would pretty much out perform longwires less than about 1000 feet. IT's only problem was intemod and overloading issues if MW stations were nearby. Mine actually wore out due the intense UV from the S. CA and AZ sun. I still have the electronic guts and should probably rework it for use again. I do have the PAR Inc. high and low pass filters and they work great on 50 ohm lines to eliminate intemod after a passive tuner. Despite the local MW stations I don't have any problems at night and I can force the situation most of the time during the day as long as there are no amps in the signal chain.

My $25 RS PLL AM/FM radio is just as sensitive as the over-hyped S350, which I happily returned to RS, The S350 suffers from drifting, images galore, is cheap plastic, has cheap switches, has a smelly imitation-leather handle, an a bunch of switches that are all hype and cheap, a plastic speaker grill, an antenna that flops and doesn't lock into place, and a low-resolution display - the list goes on and on ! Wouldn't pay 5 bucks for that crappy radio ! Give me the RS DX-440, or Sony ICF-2010, anyday !

You might want to review the Burhans active antenna and think about
adding his
MW rejection filter. It works very well with most JFET active antennas.
There
was something odd about the Burhans LF match box. It has been too
darned
long, but I think one of the torroids he used, or his magnetic bias
scheme
caused some serious IMD. I have most of the RE Burhans stuff, but no
longer
have the one on the LF matcher. Maybe I can stop by the engineering
library Sat
and pull that one from microfilm.

Will is having great success with the Lankford active dipole, the AMRAD
is a
rather poor copy/clone of Dallas work and in the dipole mode, IP2 goes
up several
dBm. And you can rotate the thing to peak a signal or null a noise
source. Ron
Hardin uses several sets of McKay 100? single ended actives antennas
with multiple phasers to knock out multiple noise sources.

What receiver are you using? Must have a very tuff front end to survive
in the RF
hell you are discribing.

A friend once ran several hundred feet of scanged CATV
hardline down a drainage ditch and under a culvert to reach some nearby
woods
where he errected a ?3000' antenna pointed great circle at England. He
really
wanted MW transatlantic DX. He used a taped inductor and a ground rod
with
several hundred feet of radials and it was killer. At lower frequencies
coax loss
can often be low enough to allow such odd stealth setups.

There are normal people that mostly make on topic posts and
occasionally make off topic political posts. Those posts might be worth
paying attention to if you care.

Then there are the whack jobs that post off topic all the time. Those
you can ignore due to the incoherent content.

Don't confuse intolerance with discernment and shame is an emotion far
apart from logical thought.

When I've looked at the dead tree version of Epoch Times which can be found in street boxes in NYC, I got the impression that it's associated with the Falun Gang religious sect. That doesn't make an article false but you should take this into account. The Falun Gang organization and the Communist Party of China both seek each other's destruction and, at least according to literature given out at FG demonstrations, the CPC and the PRC government have used torture and murder against the FG.

Does "Freegate" in the article use open proxies on ports that the PRC government isn't watching? I believe that if you connect to a the web port (80) of a server (and perhaps ports like 554 which is used by Real Audio) from a Chinese ISP you have to use a government proxy which censors out certain sites.

You could get around this by connectimg to a proxy in another country.Spammers do this so that their email can't be traced back to their ISP. Spammers even send out use trojans to get other people to run proxies on their computers without their knowledge.

Frankly, I'll take the Falun Gong over the CPC any day of the week and
twice on Fridays. There is absolutely no moral equivalency there -
they are morally 180 degrees out of phase.

Bruce Jensen

1833. REBUTTAL TO RX-340 COMMENTS BY PHIL

Newsgroup: rec.radio.shortwave
Date: 2006-11-17 06:32:04 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <W9ednZ8AJO39ysDYnZ2dnUVZ_oqdnZ2d@comcast.com>
Source record: 97973

In a recent receiver article, Phil of R75 fame made some negative comments on the TT RX-340. I asked my friend who is an RX-340 expert to comment. these are not my comments but the source is someone whose opinion is above question on this subject. Unless you have really used and understand the 340, you don't know what you are talking about.

here is what he wrote me:
****

What is he talking about? He NEVER has tried an RX-340, or any of the other radios he compares in his charts OTHER THAN that OVERRATED R-75. He has his head up his ass on the following issues:

1. The RX-340, he says, has poor dynamic range. This declaration is deceptive! In truth, the dynamic range of the 340 is excellent in almost every aspect except in one type of monitoring condition in which it IS poor: in VERY CLOSE-IN conditions--less than 2KHz--under extreme duress. In those instances, yes, the d r is poor! He's right only in these instances. Fortunately for any RX-340 user, these conditions rarely are encountered because the filtering is superb, the front end is excellent, and blocking is good. Here's an example of where the RX-340's d r WILL behave poorly. Let's say you have an RX-340. You have it attached to a high-performance, outside antenna. You are tuned to 882 kHz trying to hear a very weak transatlantic/transpacific medium wave signal from half-way around the world at s3 or s4 on your meter. You are located in Eastchester NY, only 6 miles away from 50 KW WCBS NYC on 880 kHz, just two kHz away from the weak station you are after and they are hitting your s-meter at 80 db over s-9. (BTW, that's a rock-crushingly strong signal next to a weakling of a signal.) With this being the case the 340 will, very annoyingly, splatter out the weak signal and will most likely "de-sense" for about 5 kHz on either side of 880 kHz. Not good. So, yes, Phil is right to criticize the 340 as having poor d r, but only under these circumstances. It is a limitation of the 16 bit DSP processor in the 340 being compromised in this aspect of performance.

2. Phil says the RX-340 has fair audio. Never having had any real-world, hands on experience with an 340 he relies on a discredited internet report by written by Jan Alverstad of Norway. This report was discredited by REAL RX-340 owners because Alverstad admits to not spending the proper amount of time needed to adjust and learn the radio!! So he makes a report slamming the audio in narrow SSB as poor when he didn't know that the AGC, the Variable IF Gain control and the PBT MUST be "set-up" BEFORE you can recover good audio. He would have had better results if he bothered to spend time reading the manual. No, the 340 is not hard at all to use. It doesn't take a lot of time to learn it. But you cannot just use it out of the box like

you can with most other radios. The first-time 340 user HAS to read the manual first--it's friggin' common sense on a complicated, unconventional radio!! The audio, especially in SSB is not just good, it is outstanding. Refer to Larry Magne's review in PWBR in regards to what he calls "breathtakingly low distortion in SSB."

3. The SAM is fair, Phil says. In my opinion, he's right to a certain extent. But it isn't ALWAYS fair. Most of the time, about 80 percent of the time, the SAM works well, but not as well as the R8-B. The 340 synch quirks has been well-documented by PWBR, 340 "gurus" Albert Belle Isle and Carl Moreschi, and by myself on eHam. And as for the remaining 20 percent of the time? The SAM is indeed only fair. This is because when the desired signal goes into a rapid, deep fade, the synch "lets go" of the signal causing a disruptive clicking which grows tiresome and distracting. Using a long hang time setting helps iron this out considerably. There is another situation--part of the 20 percent--that causes the SAM to misbehave. When there is an extremely, key word: extremely, strong, nearby signal 5 kHz away from the one you are tuned to, the synch throws a fit. It starts to "pop" and "screech" loudly. Really no excuse for a great radio to have. TenTec failed on this. But overall the synch is just OK. This feature is the 340's major fault; it's ONLY major fault luckily. What redeems the 340 and prevents me from hating it for its fair synch is that the radio delivers outstanding manual ECSS, better than any other radio I have ever owned. When all of the parameters are properly adjusted--PBT, AGC speed, IF Gain setting, BW--the recovered audio is similar to the audio of the HF-225 with its synch on and in the HiFI mode.

4. The internal speaker is poor. No qualms here, he's right. But big shitting deal. Who wants to use a small 3" top-firing speaker on a $4,000 radio? Put a REALLY good speaker on the 340--I use and LOVE the Sounds Sweet--and you'll be happy.

5. The display, Phil says, is fair. WHAT??? The display is a thing of beauty. The readablitlty is great; the S-Meter is very large and pleasing and esay to read and is professional and accurate. The contrast/brightness is fully adjustable. The read-out is HUGE. Why does he say that the display is fair? He never sat in fron of a 340 so where does he get his info from?

Phil, not having any hands-on, real-world experience using an 340, takes ANECDOTAL information from PWBR and on-line reviews and publishes them out of context. This is the most egregious thing to do when claiming to be writing a review of receiver performance specs. It is a disservice to the hobby!

The famous Dave Z who is one of the writers of receiver reviews for Passport and his own website has some pretty bad things to say about the 340.
I had my 340 expert comment on this and here is what he said:
****

He criticizes the "sloppy" use of loose wires vs. ribbon wiring being used on an RX-325 which was a cheap, fair performer in his review of the RX-340 and finds similarities. At first it seems like a valid thing to note. But if you read his entire web presentation you'll discover the reason for this. Ten Tec claims that ribbon wiring can interact from within and cause unwanted spurs/hash on a given circuit board signal path. Dedicated wires, however sloppy in appearance, causes less degrading of the signbal from spurs/hash, according to Ten Tec.

He states that the synch is worthless. See my previous email for my experience with the synch. I don't know WHY he says this!! Even that R-75-loving Phil says the synch is fair, not worthless. My guess is that when Dave has used a 340, he never bothered to read the manual thoroughly to learn how to use it properly!!!!!!

1835. Panasonic RF-4800 shortwave communications receiver

Newsgroup: rec.radio.shortwave
Date: 2006-11-17 07:52:01 UTC
From: papillon123@nospam.net.au
Message-ID: <12lqqh3ak4frg2d@corp.supernews.com>
Source record: 97975

http://tinyurl.com/y6zxxf

The Panasonic RF-4800 is a sophisticated shortwave communications receiver. Complete worldband coverage from 1.6 to 31 MHz is provided by eight bands. AM from 525 to 1605 kHz and FM band reception from 88 to 108 MHz is also supported. The double conversion superhet circuit provides good sensitivity and image rejection. Wide-Narrow bandwidth selector includes ladder-type ceramic filters to reduce nearby frequency interference. The BFO pitch controls ensures smooth SSB and CW reception.

Features include: &#65533;" Headphone Jack, S/Battery-Meter, RF Gain, ANL, Light,
Bass, Treble, Speaker Jack, Two Tuning Speeds, Handles, Antenna Trimmer,
Spinner Knob, Record Jack, Aux. Input Jack.
Will operate from 240 VAC, 120 VAC, external 12V DC source or eight D cells
Dimensions: 482(W) x 200(H) x 354(D)mm

Weight: approx 8kg / 20 lbs

This is being sold from a deceased estate.

Unit is in excellent condition for its age, seems to work fine however as with most electronics on eBay is sold AS-IS.
Includes original operating manual and power cord.

*****
This is a NO RESERVE auction *****

I will post this well packed to anywhere in Australia or Overseas at buyers expense for the actual cost of postage/freight using any method you wish.
You may go here to help you approximate cost of postage to your location:
http://www1.auspost.com.au/pac/

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.
////////////////////////////////////

Hmmmmmmmm

Not unlike what Katie Couric and Matt Lauer do on a daily basis. Or, for
that matter, what CBS, NBC, ABC, and CNN do daily.
When a Republican goes awry, the Media plasters it on Page One. When a
drunken Democrat does so, the Media lauds the Democrat for "getting help"
and calls it a "Courageous Step."
Chappaquiddick, anybody? Mary Jo Kopechne ring any bells?
Now, when it comes to "picking up a turd by the clean end", which end would
that put Senator Kennedy on?

Whew! we sure can get hot under the collar when we own a mega buck radio!
It's just natural human nature when you have spent over 4k for a radio that
you are going to defend it to the hilt.

Fact is that two of my serious DX mates owned them and sold them off as
mediocre DX machines.

Fact also is that the Icom R75 is amazing value for money in a top class DX
machine for around 500 bucks

I picked one up at the hamfest over here a few months back. It didn't weigh nearly what I thought it would. Not like a Harris 590 or a Racal. So for dollars/pound I would have to say it's an industry leader.

I'm listening to 3867.5 sideband on my Racal RA-17L now (using bfo) and it sounds pretty darn good. I don't think I need a TenTec for now.

You describe Falun Gong as a sect. Have either of you met a Falun Gong member and conversed with them? You will often find them demonstrating in front of Chinese consulates and embassies worldwide. Go there and talk to them and then tell me they are a "sect."

Falun Gong is very similiar to Yoga and other Asian excercise/meditation. To call it a "sect" reveals how much the Communist Party propaganda has permeated Western thought.

I must say that I think the schedule format in Passport is superior
(easy/fast) than any other I have used.
I simply wish it was available online with regular updates that I can print
out when needed.

The RF-4800/4900 are fun to operate but their shortwave performance is
nothing special. They were however very good MW receivers.

That's about what the open box and manufacturer repacks sell for on
Ebay as I remember. Chances are it isn't new and doesn't come with a
warranty but check with the seller. Still for the price it would get
you a good performing reasonably well made radio that sounds good.

Nice looking radio that performs about as well as the others in the
long running 4xxx and 2xxx series of receivers. But for those of us on
the other side of the world watch out for shipping from Australia,
which could easily double the price of the radio.

Not me - it was the other guy.

> Falun Gong is very similiar to Yoga and other Asian excercise/meditation.
> To call it a "sect" reveals how much the Communist Party propaganda has
> permeated Western thought.

I consider it a philosophy (not a perfect one, but better than
hard-line Marxism), and the fact that it is practiced by *very* many
people (more Falun Gong worldwide than Jews, for example) lifts it out
of the sect department, anyway.

I agree - it would be nice, and to survive in this day of the web, it
may need to adapt just this way. It is very user-friendly and valuable
at the dial, very much like the older WRTVH-related publication. The
EiBi can probably be loaded into a format comparable to this.

> hobby!

In two adjacent messages you have tried to convince us that the three opinions of Phil, Jan and Dave about this radio are wrong and your one opinion is somehow the right one. I'm not sure I understand why you

are getting so wound up about what is little more than anecdotal evidence about one radio with a very small following. Unless of course you possibly have another reason. Maybe you are getting ready to sell one on Ebay and just saw the market value take hit. If so, maybe you should take a lesson from your friend Radiomart and ignore the comments of others and just get on with business. Or maybe you just can't stand the thought of three people having an opinion that differs from yours.

My all-time favorite radio is the Kenwood R5000 and it had it's share of warts which were repeated by many reviewers. Whether we like how the radio feels, know how it works and know the bands are really the most important criteria for picking one receiver over another.

Your opinion about that radio is just another one to be added to the list. But you do seem to be outnumbered.

The Harper government's expressions of concern over Chinese human rights issues in the past months have far surpassed those of the previous Liberal Party administration. In September of this year, the Canadian Parliament passed unanimously a decision to give the Dalai Lama, the spiritual leader of the Tibetan exile government, the status of honorary citizen, despite the CCP's protest that this will hurt trade relations between the two countries.

In addition to this incident involving the Dalai Lama, Beijing is also very annoyed at the fact that numerous parliament members have openly criticized the Chinese regime's persecution of Falun Gong and supported Falun Gong practitioners appeals for human rights.

In May of this year, when the Canadian independent investigators David Matas and David Kilgour started their investigation of the CCP's organ harvesting from Falun Gong practitioners, Rahim Jaffer, chair of the Conservative caucus, attended and spoke to show his support at the news conference of the investigation-a news conference held inside the Canadian Parliament building.

Given your attitude on this forum and the way you write I find it very
hard to believe that you have had any involvment with Sidwell Friends
school, other than possibly walking by and seeing the sign.

Not every counter intuitive opinion indicates ulterior motive.

Mike's character, from those of us who have had ongoing exchanges
with him, suggest that his motives are anything but disingenuous.

I'm trying to figure out his motives for launching two tirades against three other individuals because they expressed an opinion that differed from his. Those individuals give the impression of being at least as qualified as he is to express an opinion on a radio.

I think that Mike should not get so wound up because not everyone else shares his view of that radio. From what I've read not many are really that impressed with it. But if it's a radio that he likes and enjoys tuning the bands with then more power to him.

Screw you, asshole ! You are just jealous ! Harrison is the
headmaster, Mrs. Dater was my 6th grade middle-school teacher, my
Brother dated Julie Nixon in 1965, I knew Lisa Stark of NBC Nightly
News, Carter Eskew was my best friend and was Al Gore's speech wriiter,
Zartman House is where graduations are held, the gym is next to the
middle school, we had sit-down lunches that were served to us, we
played Landon, St. Albans, and Georgetown Prep in football, and the
library is next to the high-school. Anything else ? BTW, these radios
are still crap !

A very close acquaintance of mine grew up in and lived in mainland
China until a few years ago. She certainly has no shortage of unkind
things to say about the Chinese government. On the other hand, she's
about equally unimpressed with the Falun Gong movement.

This is getting off-topic for R.R.S. (so what else is new?) but there
are legitimate criticisms of the Falun Gong. See
http://en.wikipedia.org/wiki/Criticism_and_controversies_about_Falun_Gong
for a long and even-handed discussion of the subject, particularly the
"Is Falun Gong a Cult?" section.

My enemy's enemy is not necessarily my friend.

Mike is pretty much on target on his comments. The other people
referenced are entirely off base. I've owned one for years, love the
performance and I'm not selling it.

I'd rather be a part of the correct minority than part of the incorrect
majority.

Not every counter intuitive opinion indicates ulterior motive.

Mike's character, from those of us who have had ongoing exchanges
with him, suggest that his motives are anything but disingenuous.

==========

Peter and T-man are correct. MM is quite right on the RX340. i'm on my
second one here. wish i still had the first one. oldest grandson talked
me
out of it. the 340 is not for everyone. it's like a Racal or a WJ. you
don't just
turn it on and listen. there's a lot more to it than that. read the
manual and
play. it does it all. first rate rig. as for Mike, i have bought, sold,
and traded
with him. he is one of the good guys in our hobby.

Father Michael.

Compared to other analog radios the dynamic range specification is not
good but in practice it is OK. Keep in mind that this is a hybrid radio
with an analog front end and DSP back end so the specifications don't
translate the same as a comparison between two analog radios.

In actuality I have not come across a situation where the dynamic range caused a reception problem.

The report of fair audio is absolutely incorrect in all respects. The audio is excellent on AM and SSB. The SSB audio is the best I have heard.

Yes you do have to adjust the radio to get good audio. No it is not hard to set the radio up to get good audio for AM or SSB. The radio is very straight forward to operate.

> 3. The SAM is fair, Phil says. In my opinion, he's right to a

The sync does lose lock on rapid deep fades. If you are in the side band selected sync mode you can get some pop-ing noise in the audio on rapid deep fading condition but not in DSB sync mode. Fiddling with the AGC functions can help.

I never had a nearby station cause the sync to squeal.

The sync is satisfactory 95% of the time.

> 4. The internal speaker is poor. No qualms here, he's right. But
> big shitting deal. Who wants to use a small 3" top-firing speaker on
> a $4,000 radio? Put a REALLY good speaker on the 340--I use and LOVE
> the Sounds Sweet--and you'll be happy.

The internal speak is convenient to use when moving the radio around. No the sound is not great but it is OK. I just use a Sony book shelf speaker or headphones with the RX-340 same as I do with the Drake R8B and the AOR7030+ I own.

> 5. The display, Phil says, is fair. WHAT??? The display is a thing
> of beauty. The readablitlty is great; the S-Meter is very large and

> contrast/brightness is fully adjustable. The read-out is HUGE. Why
> does he say that the display is fair? He never sat in fron of a 340
> so where does he get his info from?

The display is great with all functions shown at the same time, it looks good, and is easy to read at a distance. My only gripe is that they used a bulb for the S meter that can and did burn out. I replaced the bulb with LEDs and that problem is solved.

> Phil, not having any hands-on, real-world experience using an 340,

Quoting bad information on the web and not using the radio himself makes for a lame pointless review.

I've own this radio for years now and am very happy with it. I don't see the price going down on it either.

I use the sync all the time. Works great. Whoever Dave Zantow is he
needs a reality check.

I have been inside the radio a few times once to replace the S meter
bulb and once to fix the cracked solder connections on the power supply
PCB at the output connector. I think someone got carried away pushing on
the connector during installation and cracked the solder. There is
wiring lose inside the radio that in a military specified radio would be
tied up better to meet things like vibration but this radio is not meant
for those conditions. The wiring is no better or worse than most
commercial radios. I don't see anything wrong with the radios
construction and in fact I think it's pretty good.

I consider myself "an expert" because I have owned this radio for years,
been in the hobby for years and have years of experience in electronics.
I don't need someone to tell me about the radios performance and have
found that people misunderstand specifications, or do not know how to
operate equipment, or misconstrue observations, or just make mistakes.

I'm thinking about using this antenna for a condo I bought in San Diego recently. There is insufficient space for a decent wire antenna and I know I can sneak this up on the roof without any issues. It would probably be mounted on a pole about 5 feet above the flat roof surface with feedline down the outside of the building and into the window. There are no high rises or structures that will be higher than the antenna in the immediate area. The nearest power lines are about 65 feet away, however, this is pretty much an suburban area with the usual load of computers, TVs and other RFI generators. What experiences has anyone had with this antenna in a similar situation? Thanks for any responses or comments.

I think it's a 1.5 MM hex, might be 2MM though.

Last R71 I did, that screw was really hard to get out. I twisted up
wrench after wrench. Finally, I got a better quality one, cut off the
shorter side, and put it into my cordless drill and set the torque at 1
and after it shook away for about 20 seconds, it finally let loose, and
it came right out. There was red loctite on the thing! I don't know who
did it, but it sure was a stupid thing to do. I don't know if Icom still
has the knobs in stock. They don't have the PBT and Notch knobs, so
don't lose them!

Ground Wire Question :
[Was : ground wire question]

TD Ton...

IMHO - On a scale of One-to-Ten (1<>10) the direction
that a Ground Wire runs (routed) is about a Seven (7).

1 - Solid Connection to a Good Earthen Ground Rod / Point
2 - Bonding to the House's Electrical System
3 - Shortest possible distant / Shortest possible Ground Wire.
4 - Thick-Heavy-Large Size Ground Wire - The Ground Wire
should be at least 3X to 4X the Size of your Antenna Wire.
+ Add your own #s 5-10
So... What's On Your List When Designing and
Installing Your Radio Shack's Ground System ?

Dear Candidate,

We have openings for Maximo and the job
location is chennai / UAE.The candidate should perfer for both the
location.The skill sets are given below .If you are interested for this
opening,please for your profile to us.

Droup your resume to drns.it@gmail.com and also use the Job Code as
subject
drns.it(AT)gmail(DOT)com

JOB Code : Max45E

Maximo Sr. Functional Consultants: Minimum
4-5 years of experience in Maximo with min 2-3 full life cycle
implementations. Working experience in similar other products also will
be considered.

JOB Code : Max23E

Maximo Functional Consultants: Minimum 2-3
years of experience with min 1 full life cycle implementation. Working
experience in similar other products also will be considered.

JOB Code : Max34E

Sr. Technical Consultants: Minimum 3-4 years
of experience in Maximo with min 2 full life cycle implementations.

JOB Code : Max12E
Technical Consultants: Minimum 1-2 years of
experience in Maximo with min 1 full life cycle implementations. Good
working knowledge in J2EE platform also will be considered

Please mention the job location Clearly.

Frank, I use the H-100 in my attic here in W. Central Fla. I have the one with BNC connections. It performs pretty well with my NRD-525 for broadcast, ute, and ham reception, but it's not a DX-er, at least not the way I have it set up. It performs especially well on the medium wave BCB. Locating it above the roof as you described should give you better performance.

I did have local noise interference at particular spots along the spectrum. I picked up a used ANC-4 and it works like magic to eliminate most noise interference.

I think you will like the H-100.

Happy listening,

Greg

Have you walked around on the roof with a portable to see what it's
like up there noise-wise? I'd do that before ordering the H-800.

I like the H-800, but are you sure there's no way to get a decent wire
up there? Maybe a small loop, or a wire sloping from the roof to a
support on the ground?

I ground my masts and bond the co-ax shields to the masts. I use the
IEC grounds at the indoor end. We don't have lightning here, but if
it were to threaten I'd just unplug everything and throw the wires
outside..

1916. Diego Garcia

AFN heard here on 12759 at 1415 and Diego Tower 13254 heard at 1425. Also heard here yesterday during the same time frame.

I'm always interested in hearing Diego Garcia, besides being an interesting place, it is perhaps the farthest SWBC station from me at about 9620 miles.

AFRTS Diego Garcia here in the lower Midwest with a fair signal now at
1445...I've also occasionally been hearing them lately with a much
poorer signal around 0000 on their night freq of 4319.

I think they're about the closest thing there is to an antipodean
station for a lot of the US, so always impresses me to hear their
modest signal at all. Anyone know what their power is...1 kW? 3 kW?
Passport and WRTH don't say, but I see to recall it's not that much.

1919. MFJ-1026 or ANC-4

Considering one of these for Christmas, and would like any user's assesment to help make the determination between the two. I've received mixed responses regarding the MFJ model, and I'm curious if the ANC-4 is the more favorable of the two. I'd be using it to eliminate some local noise from nearby powerlines in conjunction with a Wellbrook ALA-1530, and a random-wire as the noise antenna. Any advice, opinions, or recommendations would be appreciated.

I have the ANC-4 and haven't found it to be useful with a Wellbrook. It worked great when used with a long wire as the main antenna.

There are older threads that indicate you need a good noise antenna (vertical J-fet buffered antenna) to get it to work well with the Wellbrook.

1927. Re: MFJ-1026 or ANC-4

Newsgroup: rec.radio.shortwave
Date: 2006-11-18 17:43:17 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <455F462A.4C95@mindspring.com>
Source record: 98117

The ANC-4 works on MW, whereas you have to remove filter from the
MFJ to do that.

Count on working with 2 real antennas, not the fake noise stub one.
You'll find it much more versatile.

I have 7 ANC-4's and no MFJ's, on 8 antennas, 2 of them Wellbrook
ALA1530's.

Chief complaint is that the pots get scratchy pretty quick,
because scratchiness is in effect amplified by the null depth ;
fixed with a squirt of deoxit in the 2 tiny holes at the bottom of
each pot (careful you don't get any in your eyes).

Second complaint is that the circuit really needs a bandspread pot
on the phase, as you're into really tiny tiny adjustments at the
bottom of a deep null.

This would be chiefly from taking out a local broadcaster to hear
the broadcaster under him.

1937. Passport receiver reviews

Newsgroup: rec.radio.shortwave
Date: 2006-11-18 20:59:45 UTC
From: John Plimmer <plimmer@nospamtelkomsa.net>
Message-ID: <ejns9jhvn1@ctb-nnrp2.saix.net>
Source record: 98142

Passport does some nice reviews of serious radio's, better than I read in most mags that seem too keen not to upset their advertisers who supply them with loan radio's.

I had some e-mails from Larry Magne and he explained that market research had shown that the main interest for readers was in the $50 to $150 portable radio range, and that there was only a handful of those like myself interested in the more expensive tabletops.

With only a few top end radio's now available now that Drake has gone off the scene, here's my comment on what's left:

Eton E1 - a couple of my DX pals own this new offering and rave about it's abilities to do serious DX, even connected to a big antenna which will not overload it.

Icom RC-75 - for the price really good value for money. Many of my serious DX contacts use this radio with excellent results.

AOR 7030+ is probably the top analogue DX machine, but not everyone can get used to it's difficult and quirky operating system, small limited display and tiny cramped remote keypad. Those who got used to it's limitations love it.

JRC NRD545 - every serious DXer I know had one sold it on. It's early 16 bit digital processor limits it's performance. Here's what one serious DXer says about the one he sold: "I will never advise anyone to buy a 545".

Ten Tec RX340 and WJ 1000 - these expensive radio's have only 16 bit processors which limits them. However owners in this newsgroup defend them to the hilt. Two of my DX friends had RX340's and sold them for better options.

SDR computer radio's - some of my pals have moved onto these radio's and love them. I don't like computer radio's at all though - prefer to have a large radio in front of me with full functions and a nice tuning knob.

So, that's not a very wide choice left anymore, but there is another set of radio's that represent good value for money and offer the listener outstanding performance, and that is the ham transceivers. I asked Larry Magne why he doesn't include some selected ones in Passport like WRTH sometimes do, and he replied again that the interest was too limited to a very few diehard DXer's and he could not therefore devote the limited space and resources of Passport to this small market.

Here's my take on a few ham transceivers that I think you could have a look at:

Icom IC-7000 has a 32 bit processor and every bell and whistle you could want, plus FM up to 450 Mhz. See Bjarne Mjelde's review at:
http://www.kongsfjord.no/bm/ic-7000%20review.pdf
Very small and highly portable, also does not need to have the MW band enhanced. $1500

Also at $1500 is the more heavy weight Icom 746Pro with a 32 bit processor. See the Dallas Lankford review:
http://www.kongsfjord.no/dl/Icom/IC-746Pro%20Impressions%20&%20Mods.pdf
It's only drawback is like most Icom's, the MW band has been attenuated and you are going to have to get a skilled techie to remove that. Otherwise great value for money and a great DX machine. Friends who own them rave about their performance

Finally, if you want to spend big bucks on the ultimate with every bell and whistle you could hope for, then take a look at the:
Icom 756 PRO III and the
Yaesu FT2000.
At a price of $3000 they will outperform the 16 bit processor's in the TT RX340 & WJ1000 with their 32 bit processors.
See my review of the 756 at
http://www.dxing.info/equipment/

The ham transceivers do not have a sideband selectable sync detector in AM, except for the Icom 746Pro. If you just like listening comfortably to AM broadcasts then a ham transceiver will not suit you. Rather look on eBay for a good used Drake R8B with it's superb sync detector. And if you are squeamish about having a transmitter around, just get a techie to disable the transmit function, a simple and inexpensive mod that can be reversed later if you want to again sell the radio.

good DX and don't forget to have fun.....

Strange ! 24-hour display should be the "international" option along
with Celsius, while the more "American" 12-hour display should work
with American Fahrenheit...
Kaito must have gotten something wrong there.

My guess would be that, for FM, you don't need any of those. Just any $5 pocket set will do the job. This being said, my personal preference would be the Sangean, but if you travel, a smaller Sony would be an excellent choice, like the SW100 or SW07 if you manage to find one of those.

Nothing heard here. Maybe Todd just needed to talk to someone on 11 meters for a while and he will be back again on 13.556 real soon.

If I'd known operation was going to be so sporatic, I would have made recordings and burned them on a CD.

Good point, Yes, very good point.

No-coders must go to the end of the line for refreshments at meetings.
Code hams must be served first and should take more treats than they want
and need. When all the code hams are served and there is nothing left,
no-codes get the left-over Coffee grounds and Cookie crumbs. This will
teach no-codes that by working harder to be better hams, they will not
only get more radio spectrum, they'll also get treats at club meetings and
won't have to sit on the floor with an empty stomach.

No-codes can still dig their treats out of garbage cans and toilet bowls
if they wish, but they'll have to share them with any CB'ers that might
also be at the meeting.

I'm hearing a strong digital signal of some sort when my radio is in CW mode, on 4.005 MHz in north Texas during the evening hours. Sounds like high-speed Morse code. I've done a web search with no luck, except that Vatican Radio supposedly transmits on that frequency. Any idea what this is and where it's coming from?

Thanks!

I'm receiving it in Calgary, Albert Canada also.
S2 to S3 with lots of background hiss. It's almost like a cross between
radio teletype and morse but that may be due to muting by the noise.

Unplugging stuff during lightning storms is always a good idea. Are you grounding the coax shield at both ends? If so, would that not set up a possible noise inducing current flow in the sheath because of voltage differential between the grounds?

Source record: 98050

John,

Thanks for the excellent assessment of current receivers available to DXers!

The fact that we are not seeing new, traditional communications receivers come along once or twice a year as we used to is a sad commentary on the hobby decline. I believe that more and more, DXers will need to content themselves with quality used gear (in the traditional sense of radios with knobs), unless they go the route of transceivers as you mentioned. I used to own a Yaesu FT-900 and an ICOM IC-756Pro for receive-only use, and they are fine performers. I had various reasons for selling them, but now am resigned to operating computer-driven SDR radios for the foreseeable future if I want cutting-edge performance.

The advances in communications equipment will be in the SDR devices, not labor- and parts-intensive analog receivers bristling with knobs. Like you and most others, I prefer knobs to tweak, but the unique features and hotrod performance of radios like my SDR-1000 make up for the lack of the tactile feel of quality knobs, buttons, etc. when operating a receiver. I do use a Contour Shuttle Pro and a Griffin Powermate knob when controlling the SDR-1000, but they are a token nod to traditional receiver controls.

You mentioned the E1's usefulness with long antennas. I've been very impressed with this ability, too, but only when keeping the "DX" preamplifier turned OFF. My E1 is more prone to overload and spurious images with big antennas if the preamp is enabled. If extra gain is needed (usually it isn't), I found that a quality external preamp works better, something like a Wellbrook preamp or Kiwa, which use the very stout "negative-feedback" design. When I owned AR7030s, they had the same trouble with the stock, internal preamp. Performance was always better with a good external preamp, one that had better dynamic range & IP3.

Bjarne Mjelde's review of the Eton E1 is very thorough in this regard. He describes his experiences hooking up long antennas to it, along with other comments and information about the E1. His review is here:

Its coming in s9 and over in Austin.
I'm trying to decode it with LinPSK Software for Linux, but no such luck.
I'm new to the data modes and so far the only thing I can successfully
decode is ham rtty. Is there something else going on with this feed,
encryption maybe? Also, I don't have the ability to set the baud rate with
this software. Should that matter?

Thanks -
- Matt

>
> -Brian

I bought the MFJ 1026 about 5 months ago and it made listening enjoyable again for me. I use it to null out a nasty source of noise coming from the power company's equipment right in my immediate vicinity. The only extra pain-in-the-ass was that you have to put up a pretty decent noise antenna as that little telescope included is a joke. Everything I read when I was shopping seemed to indicate that the ANC-4 and MFJ models probably come out about the same performance wise. As far as ease of operation, I'm not real sure. I do know my 1026 can be pretty tricky sometimes to get the nuisance signal nulled.

Also, if you've got more than one noise source, you might be SOL using either brand.

Good luck! - Matt

It is FSK (like RTTY). It is 850 Hz shift, 75 Baud.
It is s9+10 in southern California at 0400 UTC.
There are commercial and military signals
like this. Typically, if it is commercial,
the frequency will pop up if you google it.
Assuming you googled thoroughly, it is probably
military.
There are a dozen or more other stations like it
across the HF band (commercial and mil).
They aren't ASCII. They aren't Baudot.

I am using an H-800 at my condo here in Oceanside, CA. It's working relatively well despite its size. I have it connected to a Ten Tec RX-320D "black box" receiver. I also have a RF Systems "Mini Windom" antenna which is connected to a Kenwood R-2000 (via a now discontinued Palomar Engineers PA-360 pre-amp/LPF-HPF/attenuator). I bought the H-800 from LF Engineering and the Mini Windom from Universal Radio Inc.

I also have an MFJ-1786 HF loop which I use in conjunction with my transceiver. I am contemplating switching the H-800 for a higher performing H-900 being that both antennas are co-located. The H-900 is an improved performance model that is exclusively sold through Grove Enterprises (Monitoring Times).

All three are physically small and they are stealthily installed on my balcony. In addition to keeping them discrete from condo management, I also had to keep them discrete for my wife... another form of management ;-)

With regards to noise, the basic rule still applies: place you antenna as far as possible from noise sources. In my case, I did what I could and reluctantly accept the interference I still receive (not much choice when you are in a condo). The main noise culprits are computers, dimmers and TV. Unfortunately, I have all three of these.

The Traveller

> >So... What's On Your List When Designing and
> >Installing Your Radio Shack's Ground System ?
- Hide quoted text -

- I ground my masts and bond the co-ax shields to the masts.

1 - Grounded Masts - Good Idea.
Ground Rod placed right at the base of the Mast
and very short and heavy Ground Wire attached
right at the base of the Mast.
* Creates a primary {potential} Lightning Strike Point that
is well grounded and away from the House / Building.
- - - "The Remote Ground" -and- First-Strike-Point

2 - Bonding the Outer-Shield of the Coax Cable to the Mast
creates 'unity' between the two and provides a Path-to-Ground
via the Coax Cable to the Mast and "The Remote Ground"

-and- the First-Strike-Point

NOTE - Burying the Coax Cable between the Mast and the
House is also a Good Idea. Short Four Foot (4') "L" Shaped
'Ground Tubes' at the Mast and the House can also help.
WHAT-IS-AN - "L" Shaped 'Ground Tube'
Four Foot piece of 1/2" Copper Pipe bent into an "L" Shape
* Gental bend with a 6" Radius
* Short-Side-of-the-L = 12"-16"
* Long-Side-of-the-L = 32"-36"
* Run the Coax Cable through the Copper Pipes.
* Bury the Long-Side laying flat in the ground with
the Short-Side-End about 2"-4" above ground level.
* Bond {Connect} the Ground Tubes to the respective
Grounds at the Mast and the House.

- I use the IEC grounds at the indoor end.

David -Question- What is/are the "IEC" Grounds ?
- - - I.E.C = ? ? ?

- We don't have lightning here, but if it were to threaten
- I'd just unplug everything and throw the wires outside..

That works - But walking the Coax Cable back out to
the Mast is usually consider to be the better option.
Note-to-Self - This is tough to do if the Coax Cable is Buried ;-)

having fun cause the topic is radios and antennas - iane ~ RHF

- Have you walked around on the roof with a portable to see
- what it's like up there noise-wise?
- I'd do that before ordering the H-800.

- I like the H-800, but are you sure there's no way to get
- a decent wire up there? Maybe a small loop, or a wire
- sloping from the roof to a support on the ground?
-
- Steve

Steve - Good RFI Sniffing Idea.

Frank -IF- You already have the LF Engineering H-800
Skymatch Active Antenna then take an extra 50 Foot
piece of Coax Cable and connect then all together to
your Receiver and then do the RF Sniffing with the H800
for the RFI Hot-Spots and Low Noise Areas.

Mounting the H800 about 5 Feet above the Roof is about
all that you can do without making it 'stand-out' as an
Item-for-Discussion at the next Condo Owners Association
Meeting . . .
* Take a 5 Foot piece of PVC Pipe that Telescopes over
an available Vent Pipe coming out of the Roof.
* Mount the bottom 3"-6" of the H800 by inserting and
rigging it into the Top-End of the PVC Pipe with the
Coax Cable going down the Center of the PVC Pipe.
* Drill a 5/8" Hole about and Inch above the top of

the Vent Pipe for the Coax Cable to come out of the
PVC Pipe.
This can give the H800 that "Stealth-Look"

just my two cents worth - iane ~ RHF

Heard here, 25mi. northwest of Nashville, with sweep tones & fast CW.
Very weak, serious interference from Memphis, Corbin KY, and
surprisingly -- San Francisco!

First Montana heard here on BCB.

All Genuine American Patriots hate the so-called 'Patriot Act' and even moreso the recent military tribunal's law.

Its supporters are the Benedict Arnolds of our generation, traitors to liberty, freedom, American values, and the Constitution of the United States.

I guess that puts Liberals in the camp of The Patriots, and you in the camp of the traitors....

Thank you for the excellent post, John.

On the small receiver front, there seems to be some use of

new technology in the newer models; everything getting tinyier

with more and more features.

The Degen De1105 is now my favorite " Walking around" radio;

but the Icom R75 is what I use when everything else is just picking up
static.

- Stay tuned !

IEC = 3 conductor detachable power cable

The cables are on the roof and come in through the windows. My house is not air tight. We don't have extreme weather here, except when the hills catch fire or turn to mudslides.

I bond shields to the masts because the masts are the shortest path to ground. This is for friction static caused by the wind. The IECs theoretically complete a ground loop, but that hasn't manifested itself as an issue.

My house is stucco on metal lath and nothing penetrates the walls except the neighbors' light dimmers, which come in on the mains.

Excellent observations and comments John! I started in this hobby when I was in elementary school with a Hallicrafters S-38E. At that time tabletops were abundant beyond belief because they all used valves! It's sad to see the demise of good tabletop receivers, however, there's always a good supply in the used market for reasonable prices if you shop a bit. That's were I've shopped for the last 15 years. I have tried almost all of the solid state receivers and still use two of my favorites, an old Icom R70 and a Kenwood R-5000. I really liked the R75, but there just wasn't enough knobs to twiddle!!

Yes, thanks, I have had a look at that site, among others. You are right, and I do not disagree - but in the USA we do not persecute and execute KKK members because of their beliefs and philosophy - in fact, we sometimes go out of our way to protect their rights, as painful as it may be - and there is no need for the Communists to do this to the FG. People with screwy beliefs, I can live with. Institutionalized murder, I cannot.

Ron Hardin wrote:
> The ANC-4 works on MW, whereas you have to remove filter from the
> MFJ to do that.

To be very clear, the MFJ *does* work on MW even with the filter, when your goal is to remove noise. What the MFJ also does, because of the filter, is to attentuate the MW freqs, which may not be desirable. I do not do a lot of MW, but when I do, the MFJ is also effective at nipping the offending MW stations to get at the weaker ones underneath.

> Count on working with 2 real antennas, not the fake noise stub one.
> You'll find it much more versatile.

Agreed. It really helps if the two antennas are equivalent in terms of ability to "hear" noise. A wire may not be the same as a Wellbrook, consideirng their significant design differences.

I will say, though, that the little stub antenna on the MFJ was fairly effective as a noise antenna in the 60-m band. That may have been a fluke of the local RFI situation.

This fix works on the MFJ as well. Squirt and twist a few times and you're set.

> Second complaint is that the circuit really needs a bandspread pot
> on the phase, as you're into really tiny tiny adjustments at the
> bottom of a deep null.

That would be nice on the MFJ as well. One other issue is that so much of the noise seems to null at the very same place on the pot's rotation, and that portion of the pot gets scratchy fast.

That's right - both the ANC and MFJ can only nab one noise at a time,
hence Ron Hardin's cascaded-unit set up.

Two weeks later ... and Chuck Harder is still off the air - more
specifically, he's not doing any new programs.
I have a theory: CH is doing what the Beatles (Paul and Ringo) are
doing - releasing old outtakes, first edits, drafts, etc., and

remixing, repackaging, and digitizing them for a new, younger audience (isn't multimedia computer technology wonderful?).
I wager we won't hear any new CH broadcasts anymore. "For The People" is off the air for good - the live stuff, anyway. That said, CH's old material could still be relevant, depending on the topic. TalkStar Radio Network realizes this, which is why it's still broadcasting "For The People." I figure, with 25,000+ broadcast hours since 1987 (that's 2.85 YEARS behind the mike if you scrunched it all together), CH has plenty of stuff "in the can" ready to be put out to a bated-breath audience, in whatever format sells.
Geez ... I can just hear it now ... the Chuck Harder rap ... I seem to remember his playing a Ross Perot anti-free trade rap montage just before the November 1993 NAFTA vote in Congress ... yes, I know, CH doesn't like rap (neither do I), but if it gets him new listeners, well, why not?
More likely, we'll hear CH broadcasts that sound new, but really aren't. I bet on Monday, ol' Chuck will be back on - or so it would seem - and will talk about Iran ... the Iran of 1994 ... but TSRN will be very careful not to divulge that temporal fact.
Hey, Elvis and Jim Morrison are still alive, aren't they? And "For The People" will be around forever, won't it?

RHF - Your mounting idea was exactly what I was thinking of! I used
this technique in the distant past for a 2M J-pole antenna and it
worked well until they decided to re-roof the condo. All that was left
with a cut end of the coax! That should not be a problem here since it
is only an 8 unit complex and relatively few are home during the day.
I'm going to "RF probe" the roof on my next trip over in December and
see what results. At least the lead-in will come down in a very
"vegetated" area on the alley side of the place where no one will
notice. I've noticed the H-900 on Grove but wonder what the advantages
are over the H-800. If it is better at overloading and IP3 I just may
go with it despite the extra expense. I am tending away from a wire
arrangement due to the larger surface are and the horizontal
orientation over the roof and added noise pickup as such.

1995. Re: Passport receiver reviews

Newsgroup: rec.radio.shortwave
Date: 2006-11-19 19:10:46 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1163963446.850316.270190@k70g2000cwa.googlegroups.com>
Source record: 98085

Dear John,

Thank you for your very thoughtful and intelligent discussion of current shortwave receivers. I should like to mention two points:

1. Software-defined radios are "iffy" at best, in my opinion, as when operating systems change (Windows XP to Windows Vista to Windows XXX, etc.) these radios may or may not work properly with these new OSs. Therefore, the purchaser of a fairly expensive SDR may be forced to operate it with an older computer and, if that computer "dies," he/she may have a very expensive paperweight. Even though Microsoft has taken some pains to ensure that "most" older programs still work with the newer OSs, this may or may not continue to be the case. The situation is even worse with Apple as they have, in the past, "abandoned" compatibility with older programs in newer OSs.

2. In my opinion, the "difficulties" with the AOR AR7030 (Plus)'s OS are VERY blown out of proportion. In reality, it's no more difficult to operate than a VCR or a digital camera. (And remember - this is an "old geezer" talking!) Yes, the radio takes some getting used to - but what piece of good equipment does not? (It took me about a half-hour.) Read the manual (which you can do online even before you purchase the radio*) and you can see for yourself just how easy to operate it actually is. Most of the menu selections are, in fact, rarely used. Tuning in a station, adjusting the radio for best reception of that station, and sitting back and listening are no "harder" than on any other good shortwave radio. Yes, it's very different, but that doesn't make it inordinately difficult per se as some have indicated. Some people have been heavily influenced by "negative" reviews or postings about the AOR's OS and were thus prejudiced when they obtained the receiver. Others may have been unwilling to engage in the learning process necessary for this sophisticated piece of machinery. ("When in doubt, read the instructions!") Personally I feel that this radio is the finest piece of shortwave equipment designed in the past fifteen years. (AND - for those who do not wish to have to think about "menu" selections, there is Jan Arkesteijn's superb and FREE "RxWINGS" computer-control program which allows me to operate the radio from across the room while sitting in my easy chair. With it, I don't even have to look at the AOR's display! Everything is shown on my notebook computer's screen and just about everything has its own "button" or "adjustment" right in front of me! You are quite correct about the disappointing remote control. I have put mine away, no longer having any need for it, as I operate the receiver exclusively with "RxWINGS.")

In any event, we are all entitled to our opinions, our likes, and our dislikes but I do strongly recommend that any serious shortwave listener consider purchasing a new AR7030 Plus, assuming he/she has the financial ability to do so, and also assuming he/she is willing to take the relatively small amount of time necessary to properly learn the operating procedures of the radio. I do not believe any such person will regret the purchase.

Thanks again very much for your excellent article. Your posts here are always of great interest.

Best,

Joe

*You can even print out the manual should you desire to do so - that's what I did! Remember - I'm an "old geezer" - I still prefer to read something printed on paper rather than on a computer screen!

Heck yes,Elvis the Pelvis still lives.
Did you know those old German DKW cars with the three cylinder engines had three ignition coils? One for each cylinder.I have known that since the 1950's.My 1914 T Model Ford car has four spark coils,one for each of the four cylinders.Looks real pretty at night times when they are sparking if I have the lid off of the coil box.

I don't know what you have agains't Chuck Harder.

Is there a stand-alone, or PC software-based, RF spectrum display that can interface with the 455khz IF output of a Ten-Tec RX340? I don't really want PC control of the RX340, just a spectrum display. Thanks.

I was listening on that freq a few nights ago and
heard what sounded like a 14 year old kid belching
and making fart noises into his microphone.
Perhaps some kid or more likely a juvenile-minded adult
was just looking for his 15 minutes of fame on the freq?

> If I'd known operation was going to be so sporatic, I would have made
> recordings and burned them on a CD.

What a waste of a perfectly good CD.
Heck I'll bet you couldn't even sell one of them at the
Dayton Hamvention along with colourful cover art
and a jewel case for $2.00 a pop.

Best to just blow farts on 13.556mHz and if you
lucky you may made a few of the SWL blogs or
one of the shortwave pirate logging articles in a
future issue of the Monitoring Times.

You have to be able to change the shift to a wide shift (850 hz) instead of
the narow shift found in the amateur bands. you have to be able to adjust
the baud rate in the program .

It is there all the time, 24/7. Thanks for the report.
I think I can conclude now that it is a local/neighborhood
noise source.

I've posted a .wav recording of it in alt.binaries.alt.

Hey, another neighbor. I'm in Rancho Penasquitos.

I hear this weeoweeoweeo 'signal' at 6405 kHz usb, 24/7.
(I've posted a .wav recording of it in alt.binaries.alt.)
Bart, who lives about 12 miles south, doesn't hear it
so it is probably just some neighborhood noise source.
If you feel like it some time, dial it in and see if
you hear anything.

I don't think this is likely since you would need an A/D samping around
a megahertz, which isn't stock hardware on a PC. There are SDRs that
will give you a panoramic display on your PC.

Frank,

IIRC - The LF Engineering H-800 Skymatch Active Antenna
has a PVC Pipe Body and a Second Rubberize 4"-6" Sleave
at the bottom of the Active Antenna Element for Mounting.
* Therefore the Antenna itself is not directly grounded and
receives it's Grounding from/via the Coax Cable's outer-shield.
* This is why the use of a piece of PVC Pipe is an OK Idea
for a short Mast with the H800/H900 Antennas. Where-as
with most Active Antennas a well Grounded Metal Mast is
the preferred method of Mounting and Rigging the Antenna.
* Should RFI / EMF {Man-Made-Noise} be a problem with
the LF Engineering H-800 Skymatch Active Antenna : Then
running a separate Ground Wire up to the BNC Connector
at the bottom-end of the Active Antenna Element and using
a Hose Clamp to secure the Ground Wire to the outer-ring
of the BNC Connector -may- help in Noise Reduction.

hope this helps - iane ~ RHF

David - Thank You ~ RHF

When we had one of the older homes (cicra 1911) in Oakland, CA
rewired for 220 VAC from 110 VAC. The Electrician who roughed
the new Main Circuit Breaker Service Panel was connected to the
same old Cold Water Pipe in the Ground as the old 110 VAC system.
My Daddy then had me install an 8-Ft Ground Rod within 4" of that
old Cold Water Pipe and Ground Connection and we then Bonded
the Ground Rod to the Cold Water Pipe and Main Service Panel.
- - - As My Daddy would say : "Now Son - It Is Done Right !"
-and- by inference : "Son You Know How To Do It Right [.]"

If you mix the 455 kHz output to 10.7 MHz, you could use the AOR display.

First of all, let me say that it's pointless to fight a "my favorite radio is better than your favorite radio" war. If you like your radio but the other guy hates it, well who cares? The important thing is that YOU enjoy your particular radio and it's obviously doing the job for you. But I'd like to add my 2 cents about the Ten-Tec RX340 anyway.

I have a Ten-Tec RX340. I can honestly say it's the best "table top communications receiver" I ever had. Period. I can say this after having owned the following table top radios (in no particular order):

Drake R8B
Drake R7A
JRC NRD-545
JRC NRD-535D
JRC NRD-525
JRC NRD-515
AOR AR-3030
ICOM R71A
ICOM R70
YAESU FRG-7700
YAESU FRG-8800
HAMMARLUND HQ-180AC
HAMMARLUND HQ-100
HALLICRAFTERS S-20R
HALLICRAFTERS S-120
HALLICRAFTERS S-118

BTW, I still have the Drake R7A and JRC NRD-515. They are real gems.

I'm not going to list all the reasons why the 340 is the best rx I ever owned, there's just too many of them. If you had an RX340 and ditched it, if you prefer a Drake R8 or ICOM R75 or AOR 7030 instead, that's cool. Enjoy your radio and have fun. After all, isn't that the whole point of our hobby?

Well, I'm excited about learning code. I have been given some great
websites for practice. And I'm going to try to test in January 2007.
I don't know if I can be ready that quick - but I'm going to give it a
shot. Also, I have been encouraged by several hams to learn the
sounds as complete thoughts instead of learning just letter
recognition. A bit like learning to read, I guess - so I will try that
method. Thanks for the hints.

I think that Mark sent Todd a turd. He's been threatening to do that
in past posts, and he finally got the cujones to carry it out. It was
probably one of those frozen turds from his back yard.

There is nothing at 3202. I once heard something about
the same at 12814 but I don't hear it now.

IC-756? Nice.
I'm running a TS-440.

Hmm. The thing sounds like a somewhat fuzzy carrier
that sweeps up and down over a range of about 2 kHz in a
generally sinusoid pattern with a period of about 1 second.
That wouldn't be the best carrier for a signal. Maybe the
sweep would be to block intercept? But there isn't much point in
leaving the carrier on 24/7.

I'm using the AVCOM SDM-42B display with my RX-340...to use this unit
you have to have the accessory 45 MHz IF unit installed which then
interfaces with the 1st wideband mixer output at 45.455 MHz. I THINK
the low end of the chain at 455 Khz may not be wide enough to give you a
decent display width. Usually run the display with a width of about 100
KHz which lets you see lots of signals (and some birdies too
unfortunately). AVCOM has software that when connected to the SDM will
display the same info on your PC. The software was originally intended
for their spectrum analyzers so many of the measurement functions do not
operate with the SDM. I/O is thru a serial port--they used to have an
accessory adapter that interfaced via the PC's parallel printer port but
I could never get it to work until they upgraded my unit to a serial
I/O. The communication with the PC is only one-way so you couldn't
control the RX-340 with this unit even if you wanted to.

Be advised the unit is pricey (even after they significantly reduced it
a year or so ago) and support for that unit is VERY low on the company's
totem pole of products....but it sure is nice to be able to see the band.

As far as I know this is the only hardware spectrum display unit you can
use with the RX-340. The AOR units have only 10.7 MHz inputs. BTW,
with the 45 MHz converter installed you retain the use of a second
channel at 10.7 MHz for another receiver -- I've got the Icom R7100
hooked to that port so the SDM-42B supports both radios.

< Snip >

I don't fight the "my favorite radio is better than your favorite radio war" because it is pointless.

I do correct misstated material facts about radios posted about on the news group. I don't feel the need to correct peoples opinions because that is their thinking but I do follow up on posts that for instance misconstrue specifications or are outright misconceptions about performance of a radio.

The Wikipedia article, as one source anyway, states that many
practitioners are critical of this racist aspect of Falun Gong Dafa.
There are many shades of gray, as with any other philosophy. Whatever
baggage they carry, gross persecution by the Chinese CP is still wrong.

Sorry for my naivete, but :

When I was a kid, a decent shortwave radio cost over $300.00, weighed about 10 pounds and required a roof antenna.

Could I get a portable SW for under $100, and what could I expect for this price? (I just want to listen).

Thanks.

2039. Tropical Bands from a Tropical Land - Puerto Vallarta, Mexico

Newsgroup: rec.radio.shortwave
Date: 2006-11-20 04:43:18 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <XvCdnTeLh7T-r_zYnZ2dnUVZ_h6dnZ2d@comcast.com>
Source record: 98279

R.R.S. readers may be interested in a few comments about my recent vacation to Puerto Vallarta (Nov. 7-14). It was my first trip out of the country (other than visits to nearby Canada) since my 1993 travels to Rarotonga. The newest post at www.sdr-1000.blogspot.com has a couple of photos of Puerto Vallarta and a few additional comments.

Degen Si, Flex-Radio No! On this trip, I had opportunity to tune around on my small Degen DE1103 receiver, before and after local sunrise. I could only dream of taking the SDR-1000 and laptop computer along, but it was out of the question. I nearly took an Eton E1 instead of the Degen, but I didn't want to risk losing such a nice receiver to possible loss, theft, or damage.

The antenna used with the DE1103 was an 80-foot random wire, strung atop a low row of bushes. It was an idyllic setting beneath palm trees, situated between large swimming pools complete with waterfalls and islands, and the Pacific Ocean literally 20 feet away on the other side.

Even before the sun rose above the jungle-covered mountains to the east, the tropical bands collapsed abruptly; no slow fadeout like I'm accustomed to in the Northwest USA. Within 10-15 minutes after sunrise the tropicals were gone, and the 31 and 25 meter bands came alive. The rapid change in conditions each morning seemed to skip 41 and 49 meters; only a few signals were noted.

25 meters was amazing-- like flipping a switch after sunrise, it came alive with mostly Arabic and sub-contintental signals! A majority of them were strong to very strong. I did not bring a WRTH or Passport with me, just a printout of the DSWCI's Tropical Band Monitor, and the Pacific Asian Log (PAL) for references. So, without clear IDs I was just guessing at the source of most signals on 25 meters. It was quite a kick to hear the languages and music from (or broadcast to) the Middle East and India... a completely different band and propagation conditions than I've ever experienced for 25 meters.

Trans-Pacific MW was nearly unheard. I don't know if it was conditions, my location, or the modest receiver. Other than a weak hets on a few split frequencies and weak audio on 1566, nothing of note was logged. The local Puerto Vallarta MW stations are a real circus of over-processed and splattering signals all trying to out-shout one another; much worse than the USA broadcast band scene, in my opinion. I found quite a few 2X and 3X harmonics of locals appearing in the tropical bands (two are noted below). As elsewhere in Central America, many of the broadcast towers I saw are perched atop modest downtown Puerto Vallarta buildings.

I was surprised to find the local noise levels so low; I'd expected difficulty with RFI from powerlines, PCs, appliances, etc., but the

background level on all bands was low.

Each day as the sun rose in the early morning sky, distractions in the form of bikini-clad ladies began to appear. Such is the life of a visiting DXer in Puerto Vallarta!

The view from Google Earth: If you have the Google Earth program on your computer, try these coordinates to see the exact DXing spot: 20°37'29.91"N 105°13'55.25"W

On to the bandscan...
---
675 Unid. - weak het noted at 1305 on 11/12.

747 Unid. - Weak het heard here at 1300 on 11/13.

774 Unid. - Weak het at 1302 on 11/13.

1566 HLAZ, South Korea (pres.) - Weak Chinese lang. (per sked) with a female announcer noted on 11/11 at 1300, followed by what sounded like a hymn with piano accompaniment. Only a het heard here on 11/12 and 13.

1575 Unid. - Weak het noted here at 1701 on 11/11. In the Pacific Northwest, we usually have VOA Thailand on this frequency.

PAPUA NEW GUINEA: I was very surprised to find *no* hint of the PNG stations at all, from the 11th through the 13th. I was monitoring prior to 1200 UTC (when they should still be on the air), but nothing was heard on the usual frequencies, not even on the 4890 kHz national outlet (NBC Port Moresby).

120 METER BAND AUSSIES: The usual three stations here were weak but audible on the 11th and 12th, and quite a bit stronger on the morning of the 13th.

3240 - 3 X 1080 kHz harmonic noted each morning, plus a spur on 3270. 1080 kHz was very strong, so I presume a local Puerto Vallarta station, just like 1110 kHz.

3325 R. Nikkei, Japan - strong as ever! I expected a weaker signal than the flamethrower reception we get of Nikkei in the Pacific Northwest USA, but I was wrong. It was just booming in each morning while in PV.

3330 - 3 x 1110 kHz harmonic noted on 3330 each morning, at a strong level. I did not catch the callsign, but the promo was "La K Buena", and was parallel to 1110 kHz. Probably a network, though, as I heard a quick string of "X..." callsigns given at the top of the hour.

3976 RRI Pontianak, Indonesia - Poor to fair signal at 1210 on 11/11, but improving to good by 1336. Also heard 11/13 with a good signal and ID at 1322.

3995 RRI Kendari, Indonesia - Fair with male talk in Indo at 1337 on 11/11.

4557 Anti-Imperialist National Democratic Front, Haeju, N. Korea (pres.) - Elaborate Korean style orchestral music on 11/13, and male with announcement in Korean at 1328. Fair to good signal, and into a radio drama.

4740 Son La RTV, Vietnam - Male announcer 11/13 in Vietnamese; poor modulation but good signal. Primative sounding music and chanting by woman in tribal language at 1340.

4750 RRI Makassar, Indonesia - Fair on 11/11.

4780 R. Cultural Coatan, Guatamala - Strong signal each night, much better than I've ever heard them in Washington state. On 11/11, I noted them with a children's choir signing Christmas hymns (I guess the season comes early to Guatemala) and IDs at 1225. Coatan was still in audio at 1410 (about 50 minutes past local SR).

4800 CODAR "Swisher" - I was surprised to hear this annoying signal in the 60 meter band, just like we hear it in Washington. My guess is that I was hearing a CODAR transmitter from somewhere along the southern California coast. The one we note in the Pacific Northwest is almost certainly near infamous "Washaway Beach", a stretch of seaside land with a rapidly eroding coastline, some miles south of the Grayland DXpedition site. Scientists use the CODAR system to monitor beach erosion and changes.

4810 XERTA, Mexico - poor under the CODAR signal on 11/11; ID at 1229 with phone number. Noted at very good strength, though, 1345-1415+.

4819 HRVC, Honduras - Fair signal 11/11 with IDs at 1231.

4895 Unid. - strange, quickly repeating and distorted audio loop of Asian tonal language by female, noted at 1225 on 11/11. I suspect a Chinese or North Korean jammer here, but I have no idea who they might be targeting.

4940 V. of the Strait, China - heard in Chinese mixing with presumed R. San Antonio, Peru, in Spanish, on 11/12 at 1310. Fair.

4990 AIR Itanagar, India - Heard at 1343 on 11/13 with nice sub-cont. music and Hindi talk, but unfortunately co-channel with Hunan PBS. Fair to good level, though.

5010 AIR Thiruvanathapuram, India - Female talk in Hindi, and sub-cont. flute music at 1345 on 11/13. Poor.

5020 AIR Delhi, India - Male announcer with commentary in English about Indian politics, noted at 1350 on 11/13. No sign of Solomon Islands BBC relay, not even a het.

9440 R. Slovakia International, Slovakia - Amazingly strong signal on 11/11! Interval signal and ID in English and Russian at 1400, and then into Russian programming.

11620 All India Radio, India - Noted on 11/12 at 1435 with commentary in English by male, and ID. Fair signal.

11735 V. of Turkey, Ankara, 1400-1428* - Superb signal on 11/12 and 13! I was just blown away by the practically local quality signal of VOT. Programming was in English, with an announcement as "Our English service to Australia". Turkish language lesson at 1410, about how to tell the doctor when you're feeling sick, how to ask for a vaccination, etc. The strong

signal was pinning the S-meter on the DE1103 portable. Sign-off at 1428 with interval signal and ID.

2040. Re: Ten-Tec RX340 Spectrum Display?

Source record: 98280
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment,rec.radio.amateur.misc

Check out the specifications of a new receiver coming in January from RF Space: www.rfspace.com/sdriq.html

A feature of this new receiver is the ability to serve as a panadapter display for other receivers via any IF frequency within the HF range (455 kHz qualifies). I'm thinking of getting one for the 190 kHz RF recording capability, so I don't tie up my SDR-1000 while DXing. The SDR-1000 needs to be left on a single frequency while recording a swath of RF.

The SDR-IQ's price is $449 (receiver, software, no enclosure), and $499 (receiver, software, plus enclosure).

in a current auction, RM claims to have a NEW 11 year old Drake SW-8. in this auction he states:

The serial # is 5012950197 when I peer through the plastic bag, A VERY LATE SERIAL #

5 means 1995, that is NOT in any way a late serial number. 5 is pretty early and does not have the selectable sync. 9 or 0 would be late.

so how can we believe that this is a "new" 11 year old receiver.

The second character in the SW8 serial number is always a letter. The
letter corresponds to the month of manufacture, e.g. A=January,
B=February, etc.. The next four characters, 1295, represent the model
number. The first SW8 sold to the public was 4B12950002, meaning it was
made in February of '94. I know this because I own this particular
radio. Mine has the factory antenna pre-amp upgrade, which dramatically
improved reception, but it does not have selectable sideband sync, which
was a major design change and can't be retro-fitted. It is possible
that an early '95 model wouldn't have either of these upgrades, so any
interested buyers should request a more accurate serial number from RM.
An SW8 without that preamp is sure to disappoint.

Well, I'd warn the sucker about to deal with Martyn, but there is that
issue of private sales...;-)

I noticed our Radio-Mart(tm) buddy had some neutral feedback that quite
frankly should have been negative. I suspect the buyers used neutral to
avoid retaliatory negative feedback.

Ebay really exists for the sellers.

Degen rebadges their products as Kaito radios so maybe this will be of some help. My Degen DE1103 is at best a mixed bag. As a receiver it does a very good job of pulling in shortwave broadcast, ham, AM and FM signals and they sound good. Degen is I think capable of maaking a good receiver, but quality control is not what we see on Sony products and some of the design features are either poorly thought out or were not tested well.

My DE1103 has some flaws:

1. The tuning control is no longer consistent...turning it in one direction can result in the display going backwards, not moving or jumping erratically forward. Spin it for a minute and things calm down for a while. It's a sign that the optical encoder was assembled in less than clean conditions. Apparently this is not unusual.

2. The memories are numbered using hexadecimal...yes base 16 numbers. Who knows why they chose such an arcane design but it severely limits usage of the memories.

3. Transferring an AM station from memory to the AM VFO will sometimes cause the FM VFO to jump to the FM station with the highest memory number at the same time. This occurs with enough regularity that flipping between the bands to catch favorite stations is much more of a chore than it should be.

4. The LCD clock drifts by about 4 minutes a week. That is worse than the cheapest Timex mechanical wristwatch from decades past.

5. It is sold as a double conversion receiver and yet images of strong signals are heard regularly 900khz down.

Hmm. The runways run east-west. I'm due
north of Miramar, about 5 miles.
I wouldn't expect a harmonic of a radar to be
at 6.404 MHz.

I guess I should thank my luck. The power
lines are underground here. And I have a yard.
So I can string up a modest antenna away from
the house and run coax to it.

>

My curiosity is piqued. I need a portable plus a
good directional antenna. I've wanted that to track down
some of the local noise sources for some time now too
(but there are other projects ahead of that in priority).

Hello:

Anyone know if RxWings supports the JRC 545 ?

If so, any general thoughts on ?

Tried to find a user forum for RxWings on Yahoo, but surprisingly none came up.

Is there one, perhaps under a somewhat different name ?

Thanks,
Bob

>the baud rate in the program .

And you still won't be able to copy anything. Even 10-15 years ago,
about half the FSK out there were these wide shift signals, encrypted
and probably synchronous (no start and stop bits). Speculation: either
broadcasts to maritime (fishing fleets?) or links for military sites
too small for more expensive communications.

As a general class ham, I'm in favor of dropping the CW proficienty requirement for HF access. If you like the mode then by all means use it, but if not don't.

It would be far more useful to require more technical knowledge than being able to copy five words / minute. sb106

It would be a very good thing for ham radio to get rid of the code requirement.

HF is the REAL ham radio and it needs more participants.

I hold a general class license and I too would like to see the cw
requirement dropped.

It is a pointless requirement that has only hurt the hobby .

HF ham radio should be easier to get into. I am also in favor of a
simpler written portion of the testing.
A test that only covers basic rules and regs also safety issues would
be appropriate.

If an individual wishes to learn more about the technical aspects of
this hobby they will do so on their own.

I hate to puncture anyones balloon, but dropping the code is not going
to help bring new or young people into the hobby. Get real!!! In the
age of computers and cell phones doing more all the time, do you really

think that the younger people are going to spend the time to study to become a ham. I don't think so!!! You people need to come out of your dream world and join the real world. The only thing that is going to happen, is that the people will now upgrade and we still lose, because there won't be any new hams to take their place. You need to stop and look at the big picture and ask your self if the younger people are going to become hams. I have to say it doesn't look too promising. Just my feelings.

I say drop the code but retain the band plan with the allocated sections for cw , so not to take anything away from the people who

still want to only use cw. My biggest pet peeve is , be it 5wpm or 20wpm , it is still only ONE MODE of operation.
We aren't tested on packet,echolink, or any other mode to get even a tech license. Like it or not the code is soon to be a dead horse , and the hf bands will never be the same all because no-one knew the code. (yea right)

I will admit that I am old school. I don't want them to do away with code and I am not a member of FIST. I use the code because I really enjoy it. Using the excuse that it is going to ruin the hobby if they don't do away with it is ludicrous. In my opinion, most of the people that support this are the ones that don't want to have to work a little to learn it.

As I have said before, doing away with code is not going to make this hobby grow. The ones that are here, will upgrade and no one to take their place, still makes it a losing situation. Just my thoughts.

I say drop the code and make RF and electrical safety hands-on classes with proper lightning protection and grounding techniques. This is more valuable than any mode of operation test. I say drop the code but replace the code with more important issues I have listed above.

They should consider dropping the code for 10 or 12 meters or both for Technician class, and include 10 & 12 meters in the test that would give them a taste of HF and maybe more of a incentive to upgrade in class. But not drop the code all together.

Thanks..ck

I am in favor of dropping code. It is not used and the CW I do hear is very, very seldom.
With cell phones, text message, computers, email and chat, the radio hobby is dying.
On the other hand, if they do want to allocate another band to CW users only, that's fine too but I feel CW is hurting ham radio usage.
I do think the tests should be reasonable and would require some thought.

I don't think that dropping code will increase the number of operators. If you want it you can have it now. There's enough under the tech licensing to keep you busy for a while if you look around!

I DO believe that dropping code would vastly increase the number of general operators. Good or bad, this is to be debated. I for one (as stated many times before) am for dropping code FOR GENERAL ONLY. If they want to make the test more technical then go ahead. There are too many techs out there who pounded thru code but yet still have no understanding of basic electronics, safety, and.... CODE for that

matter. Loose the code and teach them safety and electronics before
they kill themselves!

I understand both sides of code debate, but as far as doing away with
it just so a person can upgrade to GENERAL CLASS is a bunch of bull.
How about if they do it this way, do away with code for all classes
except General Class??? that way to get access to the majority of the
HF band you will have to work a little and pass code to get the
priviledges. Most of the people that will upgrade to General will stop
there and go no farther, because if they keep code for Extra, that is
where they will stop. My feelings are, if they are going to drop code,
it should be dropped period. My feelings are, get off your lazy butts
and learn the code and then you will not have to worry one way or the
other.

A few months ago I said I need the radio for <125 bucks. So now I find it on Amazon.com but I need to know who are these featured merchants? The featured merchant appears to have an 87% positive rating over the past 12 months. What the heck does this mean? Does it mean that I should keep looking and find another vendor? I thought that when I go to Amazon.com and buy something that I was buying from Amazon.com, but it looks like that isn't so - sorta like Ebay maybe.

> cuhulin

Yes Cuhulin - take em outside for better reception. I think I like
that Drake SW-8 I think it's called. Maybe I will own one someday.

I went to visit my in-laws in Phillipsburg, NJ over the weekend. I
gave my in-laws a demo of the NEO-Loop antanna.

The NEO-loop antenna is a large loop made out of those Orange
fiberglass sticks that you poke into your front lawn before the plow
guys show up. They tell em where the sod starts so they pick up the
freekin plow blade so they don't rip up the lawn. It's got 8 or so
turns and a big dual 450uuf varyable capacitor to ring with the loop.
So I go outside and tune it up on the picnic table to 1500kc and back
in the house with the radio. The radio is buzzin like a yellojacket
nest in the house and I explain it's all the power supplies & micros in
the computers and ovens and stuff around the house. Then my neice
brings radio outside and buzzin goes away but still nothing. Then I
tell her to walk over by the loop and then the radio is blaring out
maybe some DC 50kw station or something. A pretty impressive demo.
Neice has Degen DE1103 radio I think and her brother has some old
portable radio he got from his grandpa.

2076. Buzzing noise on 9580 kHz

Newsgroup: rec.radio.shortwave

What's that buzzing noise I'm hearing on 9680 kHz? It's happening right now, 4:45 p.m on the east coast of the US, or 2145 UTC. I'm in northern Virginia, listening to a DX-398 using the whip. A search of RRS shows that to be a Radio Australia frequency, but I don't know about this time of day, local sunset.

Thanks. I think I'll head over to the 60 meter band.

Sounds like the freq. and station underneath (unrecognizable
obviously!) is being jammed.

If no one else answers, I will. I am in pretty much the same boat, but a couple years further down the road. Bought a Grundig (now Eton, I think) FR-200 for the wind-up AM/FM feature as an emergency radio, and immediately found out I could get Voice of Russia off of the whip antenna. For +/- $40.00 I was amazed. The volume control has since become a source of noise while adjusting it, but it still works like a charm. Just doesnt' have digital readout, which is really a failure.

Picked up a Radio Shack DX-402 (just like the Sangean ATS-505) at clearance price and found the BBC and a host of others, with the help of a copy of Passport to World Band Radio from the library.

Bought a slightly defective (the volume control doesn't control very well) Sony ICF-SWF7600GR off of eBay for too high a price (could have gotten one brand new, after shipping) and came to the conclusion that this has got to be the best portable for the money (around $150.00). The DX-402 is almost as sensitive, but doesn't have the superior tuning or memory cababilities (100 station memory). It is what I would recomend, for any portable capacity. I know it's over $100.00 but it is worth the extra. And I would not pay that for any other portable.

If you honestly just want to get your feet wet, pick up one of the second-mentioned radios (DX-402, or a used Sangean ATS-505 they have digital readout and tuning, which is practically essential), but don't pay more than $75.00. If you can't find one of those at that price, go with the brand-new 7600GR. It's worth it, and you can get most of your money back if you don't like it. Only you'll like it. And pick up a copy of Passport to World Band Radio. Current edition if possible. Older ones are still useful, but won't contain as reliable information.

Just my $.02. Worth at least what you paid for it, and as accurate and honest as I can make it.

Good luck,

Dave

If it's J&R, you can deal with them directly ; a good merchant in NYC.
www.jandr.com

The amazon deal just means you can click at amazon and they handle the
deal. It works fine, in my experience.

Last night I was experimenting with some new antennas and was suprised
to hear
the HI beaon from CN from 2006.11.19:23:00:00 through
2006.11.20:01:45:00 when
I shut it down because it got too #$%^ cold outside. Nice strong S1
with minimal
fades.

I used to listen to VLW from Perth Australia on 9610 in the early
morning. I think this station is (was) the farthest ground based
shortwave broadcaster from the northeast US at about 11500-miles. I have
a QSL from them. I used the following online great circle calculator.

http://www.gb3pi.org.uk/great.html

Well, someone (finally) shower a faint glimmer of intelligence and cancelled the obscene OJ stunt. If only they would now cancel their ridiculously farr-right wing news nonsense. Bill O'Reilly might actually tell the truth for once!!

LOL. Todd must have wanted to fill air-time while he was figuring out how
to get tunes back on. I can't hear Omega at night now. I can only hear it
during hours of daylight if it's on. November propagation.

>> If I'd known operation was going to be so sporatic, I would have made

I'd use cd-rw for Omega one so I can re-use the CD, I wouldn't put Omega
One on a burn once cd, that would be a waste, even if they do cost only 99
cents.

Yes, I've heard of this problem before. You're too friggen stupid to own
a radio like that, so just throw it in the dumpster before the FCC fines
your retarded ass.

Good luck with it. :) We love helping people that want to good hams get a
license. That's a good point on learning CW. As you get better and
faster at it, you don't hear individual letters, you hear and your mind
memorizes the sound of whole words.

Markie will probably flame you for wanting to learn CW, but just ignore
Markie, he's a retard.

Yes, that was VLW9, also QSL'd here. There were a bunch of others as well.

Perth is about 11018 miles from here on a short path bearing of 295 degrees
using the AZMAP by Paul Burton - AA6Z.

Then again, you may go for a Chinese radio. Degen is an excellent
choice. You may also find the same sets as Kaito in the US, only,
they'll be more expensive and not any better.
Caution : for some legal reason (the name "Degen" seems to be licensed
by some German firm), you won't find anyrhing on EBay if you search
"Degen", but if you look for an individual model (e.g. "DE1103"),
you'll find a couple of Chinese sellers who have them on offer brand
new for around $50 including shipping. The DE1103 is an excellent
choice indeeed. The Sony's controls are somewhat easier to handle, but
the sensitivity is equivalent.
Jacques

2111. Re: Shortwave Schedules

Newsgroup: rec.radio.shortwave
Date: 2006-11-21 01:33:12 UTC
From: sailtamarack@yahoo.ca
Message-ID: <1164072792.226054.140390@h48g2000cwc.googlegroups.com>
Source record: 98200

Panzer,

The ILG radio file format is not supported by any of the other sites
that publish SWBC schedules. However, there is a solution at hand!!

SWLog is a program that can easily be integrated with HRD. HRD's radio
control and SWLogs extensive database are interconnected by a DDE
interface, which is present in both programs. SWLog features include
local and remote receiver control; integrated database support for
HFCC,ILGRadio, EiBi, PTSW and several other schedule formats;
propagation prediction; audio capture; chat; extensive logging
capability; report generation and QSL generation in ten languages.

Bob Sillett, the developer of SWLog, has been working on this program
for years and keeps adding new features. The best part is the price:
FREE.

Download at http://www.shortwavelog.com/

User support at http://groups.yahoo.com/group/swlog/

I am not affiliated with the author - just a satisfied user.

Roger

OK

Well I did like the 'feel" of the 300.... had a kind of
rubbery texture to it. Do you like it?

I'm not discounting the 300..... but will look at some
of the others before buying.

What's nice is the fact that a person can even buys
such a small and cheap SW radio now days!! very cool.

Again for those just now reading this thread I want one
to use on a 2000 mile bicycle tour next summer.

I bought a spectrum analyzer at a hamfest that I use as a panadapter
for my RX340. Usually it is connected to the first IF (45.445 MHz),
and I use a broadband amplifier to bring the very low-level signal up
so the spectrum analyzer can use it.

I haven't found the other IF outs to be all that useful for a
panadapter.

BTW, I paid about $200 for the spectrum analyzer -- it's not all that
expensive a way to go.

It's a shame that MFJ didn't design the circuit to allow the filter to be switched in when required. I'm in the southern part of Edmonton and that just happens to be the locale for most of the MW transmitters around here. I do get some bleed over into a few of the shortwave frequencies.

The stub works well enough for most local noise. If you want to null out a distant MW station then it's time for an outdoor antenna.

Do you have the mod that allows for swapping the antenna inputs? This
will help with achieving nulls.

Message-ID: <ZJqdnZw6Ppsd7P_YnZ2dnUVZ_hydnZ2d@giganews.com>
Source record: 98211

Sometimes while tuning around various bands I run across a sound which I can only describe as "bubbles". It reminds me of a loud aquarium. It is still possible to hear voice above it. Does anyone know what this sound is?

I typically use PWBR to determine what I am listening to. However, how do I know if what I am listening to is relayed via a US station? For instance, tonight I was listening to Voice of Croatia at 0310. PWBR says it is via Germany. Does this mean I am picking up the signal direct from Germany, or is it being relayed from somewhere in the US? How can I find out? I feel like it is not direct because the source is supposed to be 250KW and I am getting it S8-S9. Is this reasonable?

I am using an Eton E1 with a pa0rdt-mini-whip mounted about 25ft off the ground. I am located in north Texas in the DFW metro area.

Thanks.

Assuming you do mean 9580 and not 9680, it's probably Africa No. 1
from Gabon. They've been reported lately as having some sort of
transmitter problem that's giving them that noisy buzzy
signal...whether they're even aware of it (since it's been going on
all day for days on end) is another question.

Sometimes there is a good old movie on the FMC (Fox Movie Channel) I
will watch.Other than that,that is the only good thing about Fox.Dante's
Inferno movie comes on the FMC tv channel at 8:00 AM in the morning.I
guess I will watch the movie.I never watch those Stupid full time
talking heads so-called news channels.They SUCK!

The only tv news channels I watch are www.wjtv.com and
www.wlbt.com and www.wapt.com for about ten minutes only.They
don't know anything at all about the weather and I don't care about the
sports and those stupid tv news people bragging on themselves.After
about ten minutes of watching them,I get back to whichever old,old movie
I was watching.Hud movie is on tv now.

I haven't yet had the guts to attempt this, simple as it is. To say I am klutz with a soldering iron would be understating it badly. Also, it sounds as though it is useful to use coax cable internally to provide the electrical hookups, and I have not yet figured out the optimum way to do this (a *good* picture would help immensely!).

Otherwise, it sounds like it requires just a simple DPDT toggle or similar switch mounted somewhere, with the two antenna leads attached to each pole at one end, criss - crossed to the other end, and with the two main/aux leads connected to the middle posts respectively - is that about it? There is no need to do any ground connections, since the whole chassis is grounded...

How hard can that be? ;-)

The cheapest price on Amazon has usually been etronics which is probably
the vendor you see with 87%. I have purchased 3 7600's through then
without any problems at all. Amazon also sells it themselves for 159.99
and it ships free. If you are in CONUS, I would probably use etronics.

Janospetrik,

For under a reasonably good Shortwave Radio
that is 'Priced' around US$100 consider the
"REDSUN" Model RP2100 AM / FM / Shortwave Radio
http://cgi.ebay.com/_W0QQitemZ9737227789
* Duel Conversion PLL Tuning
* AM IF Output for Expansion of CW, SSB, DRM
* Narrow & Wide Passbands for MW and SW
* 5-Inch Double Cone Speaker
Plus it looks like the Cost is about $100 :o)
Note - Picture of the Redsun Export Model RP2000

Which is the Better AM/FM Shortwave Radio ?
- The Redsun RP2100 for $100 ?
-or- The Sony ICF-SW7600GR for $150 ?

For a reasonably good Shortwave Radio that is 'Priced'
around US$100 I like the "REDSUN" Model RP2100
AM / FM / Shortwave Radio
http://cgi.ebay.com/_W0QQitemZ9737227789
* Duel Conversion PLL Tuning
* AM IF Output for Expansion of CW, SSB, DRM
* Narrow & Wide Passbands for MW and SW
* 5-Inch Double Cone Speaker
Plus it looks like the Cost is about $100 :o)
Note - Picture of the Redsun Export Model RP2000

Aww come on - surely you know that OTDF draws millions of listeners.

Hot news and burning issues set the agenda for this world class
web-cast each week.

Where do you think Matt Drudge and Larry King get their material?

If it wasn't for OTDF, Drudge and King would be outa bizness in a day.

Right?

When they talk about Radio Shack changing for the worst, they aren't kidding. Yesterday I went there to pick up some hookup wire. I've purchased it there many times before, and for as long as I remember it sat in the same place in one corner of the store. However, yesterday it was gone. An employee asked if he could help me and I explained what I was looking for. He had no clue what I was talking about, and kept gesturing vaguely in the direction of some power cables. (I guess he was hoping he'd luck out and point at the right item without even knowing what it is, but no luck.) Eventually he got his manager. I talked to the manager and explained what I was doing, and the manager also had no clue what I was talking about. Not only was the hookup wire gone, no one even remembered its ever being there. I felt like I was in the Twilight Zone or something.

Hey that is pretty funny!!! (actually I pitched out the power supply
and headphones) I just use a standard wall charger and two sets of
NIMH batteries. Much easier than trying to charge in radio.

These days, I'll look up what I want on radioshack.com first and write down their part number, then bring that to the store.

Often they still can't find it, but at least with the number they can look it up in their computer & find out whether there's any point in looking...

Here is the Ebay link for tquchina: http://tinyurl.com/y9rfrp . This links to the store so it won't expire. Browse for the TG37 adapter.

It runs on 4 AA's, plugs in to the IF out on the radio, and works like a generic BFO control. To use it you power it on, tune your signal and adjust the control. That's about it.

It has rubber feet that you don't see in the picture. I put velcro dots on the feet and mounted the board to the back of the radio.

Rich

If I understand that setup correctly, for the 2100 to decode ssb signals a separate outboard adaptor that uses 4 aa batteries is needed. This feature does not integrate well with the radio and is little more than an afterthought. Personally, if I were looking for a shortwave radio with ssb capability I would find one that had the feature built-in, or wait for the replacement for the 2100 which I believe has ssb.

In the 1980's we took the lowly Radio Shack CoCo and turned it into a real computer by hanging all sorts of things on it like an RF modulator, tape cassete drive, extra memory, faster clock, and external modem. This Redsun outboard ssb adaptor is comparable in a sense to the RF adaptor I built to allow the CoCo to run a real monitor.

I'm afraid this is yet another radio from china that shows promise, but suffers from a design that was not well thought out.

Russia's 2007 Defense Budget Focuses on Rearmament
http://intelligence-summit.blogspot.com/2006/11/russias-2007-defense-budget-focuses-on.html

Russia prioritizes strategic forces on security agenda

Russia will completely modernize the naval component of its nuclear triad by 2016, deploying new Bulava ballistic missiles on Project 955 Borey-class nuclear-powered submarines and equipping land-based strategic missile units with silo-based and mobile Topol-M (SS-27) ballistic missiles.

The R-30 Bulava (SS-NX-30) ballistic missile was developed at the Moscow Institute of Thermal Technology. It can carry up to ten nuclear warheads, and has a range of 8,000 kilometers (about 5,000 miles).

Bulava missiles, a sea-based version of the Topol-M, could be deployed on Borey-class nuclear submarines as early as in 2008, according to missile designers.

Source record: 98309

I received this in the mail today and thought it worthy of being passed along to others who may not be aware of the situation -- and alliances that Wal-Mart has formed. I wish I'd known a month ago when I renewed my Sam's Club membership which doesn't expire until January.

"I don't know if you are aware of this or not but it has come to the attention of the Christians in this nation that Wal-Mart has joined the National Gay Lesbian Chamber of Commerce and is doing all they can to support the homosexual agenda, including giving 5% of all online sales to the gay-lesbian cause. As a result there has been a call for a nation wide boycott of Wal-Mart this coming Fri. & Sat. the two biggest shopping days of the Christmas season as well as pickets of at least 300 stores, including Sam's Clubs. Christians are also being asked to shop at other stores and send copies of their receipts to Wal-Mart to show them how much money they are losing.

"The thing we want to stress is this is an exercise in the Love of God for this country and keeping the trash away from our families. Any business that knowingly collects potential disease spreading elements in one place is worthy of being put out of business. Not that we hate these people because we do not but we love our Lord and our children and grandchildren. They can change with the Love of Christ and the help of Christians who want to be of service. Will you be of help in this format? . . . "

If you're queer and/or you wish to support their sins support Wal-Mart and Sam's Club. If you do not wish to see God rain His fury upon America as He did on Sodom and Gomorrah (See Genesis chapters 18 and 19 in the Holy Bible.) then DO NOT support anyone who supports this vile "life style" which is actually a DEATH STYLE! :-)

Careful Al. You seem to follow the incorrect notion that the destruction of Sodom and Gomorrah was solely because of *homosexuality* which is not really the case. The cities and their inhabitants were destroyed because of their propensity for being *inhospitable* to others (eg torture, rape, etc). For some reason, fundamentalists and their interpretations of the original Hebrew scriptures, have focused on homosexuality as being somehow worse than any sin, which Christ NEVER says. Study the original words in Hebrew as well as cultural philosophies of the time. You will not see any such focus.

Stop perpetuating the "fear concept". All this does is drive away potential believers and further alienate you and the rest of Christians from society who think of us as kooks. Christ will return NOT to punish homosexuals, but to reclaim his loyal and innocent people. None of us has the right to pass judgement on another. That power is God's alone. It is extremely presumptuous to do it yourself. You will please God far more if you spend your life caring for your fellow man through charity and good work, protecting the earth God gave us, and telling the story of God's grace to anyone who wants to hear. It truly makes for a happier life and one which, I believe, is more what we were meant for.

Best,
-Al A.

Google money engine for Democrats only

http://www.worldnetdaily.com/news/article.asp?ARTICLE_ID=44125

With the Internet's No. 1 search engine under fire for playing political favorites with content, a search of Google's political contributions as recorded by the Federal Elections Commission shows a staggering $463,500 went to Democrats in the last three election cycles with a paltry $5,000 going to Republicans.

Of approximately 200 individual Google employee political contributions to political candidates in 2004, 2002 and 2000, all but six went to Democrats, Democratic Party organizations and Democrat-supporting organizations such as MoveOn.org [A Communist Party Intl affiliate].

MoveOn: "Fight the Right and Elect [gay] Progressives"
Translation: Topple the government and install Communist Dictatorship.

I have known for a long time google donates much more money to the
democrats than the Republicans.
Best search engines and the ones I use are, www.devilfinder.com
www.dogpile.com www.vivisimo.com
dvilfinder.com has been around since 1979,according to their website.

The upcoming radio is the RP-3000... not due 'till mid 2007 is what I was
told. Didn't wanna wait so I had to try the adapter. For ~$18 what the hell.
This is a radio for program listening anyway and a great MW DX unit.

Rich

That website does not even know what MEChA stands for. It is "Movimeinto Estudiantil Chicano de Aztl&#65533;n" and they inserted another "de" in there. The bits and pices of Spanish are those of someone who knows no Spanish.

And, anyway, "raza" in this case means "brotherhood" or, more loosely, "the people."

A long sleeve shirt I bought at the Goodwill store about two years ago,,, a lady shopper there who knows about such things,(prices) she told me that shirt sold new for $44.00.Two or three days later,I had a two inch diameter cigarette burn in that shirt.Another time I was driving along (another Goodwill shit) and I flipped a lit cigarette butt out the window of my van.The wind blew that cigarette butt up my left arm pit and burned a big chunk in the short sleeve shirt I was wearing.I am hell on shirts.

I am not on welfare, thank you very much. I am on disability, in case anyone asks, but I had a disability insurance policy through my employer, who paid me to repair computers. When that employer saw that there was a problem and told me to stay home, and when *they* put me on disability, I started receiving *those* checks. Is there a problem with this? What makes you assume I am on welfare?

Yes Frank, but that takes lots of talent & practice to achieve an
acceptable pattern in the snow..

In the snow? When I was in the Army at Scott Air Force Base,Illinois in 1963,a WAF (Women in the Air Force) bet me I couldn't wee wee my name in the snow.Guess what? I won that bet.Fortunately (or unfortunately,depending on how you look at it) it almost never snows (I hate snow) here in Jackson so I have lost a lot of practice over the years.

Interesting Spanglish there.. but as for the statement in the subject line,
as punctuated, it reads:

The Racial Family: (For) the whole race. The race was nothing.

Wanna try again?

Your English to Spanish:

La familia de la raza. Para la raza, toda. Afuera de la raza, nada.

Janos

If you use computers, you would be better served getting on the right
lists to find a used TenTecRX320 for about 2 bills.

http://radio.tentec.com/Amateur/Receivers/TT320

A computer controlled receiver like the RX 320 and a rudimentary
antena will egt you the world AND automatic station Identification and
logging

see me off list when you decide to get one

Could I get a portable SW for under $100, and what could I expect for
this price? (I just want to listen).

Thanks.

Never mind an operation system that is used by about a billion people with applications being written by hundreds of thousands of programmers. The question becomes is there a demand or need? Knowing ham radio people, an OS has never been a hindrance to any valuable piece of radio hardware such as the SDR-1000.

Now let us talk about what will make your analog radio like a AR7030 obsolete overnight without an outboard computer/OS: DRM and any present or future digital mode you can dream about.

"Joe Analssandrini" <analssandrinij@yahoo.com> wrote in message news:1163963446.850316.270190@k70g2000cwa.googlegroups.com...

Obviously, that was a typo on my part. By now, I've forgotten what the frequency I meant to type was. I'll try again tomorrow at 2145 UTC. Sorry.

Years ago, I used to listen to Africa No. 1 from time to time, though it was on a 60 meter band frequency. It always came in loud and clear.

Unfortunately, "raza" as used in the Southwest by Mexican immigrants means "the people" or "brotherhood" and not "race" in the sense of Black, white, Asian, etc. Just because a word looks similar between two languages does not mean it is the same in meaning... the word for "race" in the sense of a competition is "carrera" and that shows that a word like "raza" may look the same, but it is not.

The MEChA phrase is "Para la Raza, Todo. Fuera de la Raza, Nada".

Yes, it is hard not to post when you say something stupid, which is an all
to frequent happening.

all you seem to say is your friends do or don't like them. how can a person make an informed decision about a receivers strengths and weaknesses without knowing any details ?
can you post what aspects of these receivers were bad ? for example a lot of people like the RX-340 but you put it off with just a few words. these are 5 star receivers and there is a mail group devoted to receivers of this caliber.

Actually,

I do know what is inside the plastic loop. If you search on Wellbrook
and look at some of the past topics about it, there is one where
someone was asking the shortwave shop (their distributor) about the
indoor plastic loop, and the guy from the shortwave shop replied that
it was flexible and just had wire inside of it, so it could be squished
through narrow openings to the attic, I assume.

> Still waiting for Komrade Charles LIU to answer.

The answer is in Master Li's Sydney lecture cited previousely.

http://www.falundafa.org/book/eng/xnjf1.htm

"The races in the world are not allowed to be mixed up."

"Jesus told people not to spread the teaching in the East. I have also found no oriental people in Jesus' paradise."

Also, Master Li believes interracial children are result dharma-ending degeneration:

"the races are mixed up and it has brought about an extraordinarily serious problem."

"if one is not from his race or does not belong to his people, [Jesus/Buddah] will not take care of him. This is the truth, and it is not that I'm making up something here. What I am telling everyone are heavenly secrets. All interracial children were born in the Dharma-ending period. People are not to be blamed for it, because everyone is drifting in the tide, and nobody knows the truth."

Mike, keep your shirt on.
Reviews are a highly subjective matter, even experts and lab tests often don't agree at all.
My views happen to be mine and reflect 40 years of DXing and following all the web reports of DXpeditions around the world and observations of the type of radio the top DXer's are using and the comments they make.

If you like the TT RX340 = great, go buy another one.

People's opinions are just that, if you ask a Democrat what he thinks of his friend who voted Republican, he will probably say he is a moron. If you ask a Republican why his friend voted Democrat he will say he is mentally deranged, and so it goes.

eHam reviews are highly misleading - they represent only the subjective often non expert opinion of a fella who forked out a lot of boodle for a radio and is so happy with it that he had to tell everyone via eHam.

For instance, the Icom R75 rated 51 reviews, the bulk of them "5's". Since the AOR7030 only got 14 reviews, does that make it worse than the R75 by your standards? I think not.

My Icom IC-756 PRO III got 83 reviews on eHam, the large bulk of them 5's. Does that make it the best radio since sliced jerky came along?

My observations of scanning the top DXpedition sites on the web is that:
In North America a lot of the top DXer's use Drake R8A's and some "B's"
Europe uses a lot of AOR7030's
Scandinavian's love the NRD545
Two of the best DXer's in the world in Australia use the Icom R75.

My DX pal who I rate as one of the best MW DXer's in the world uses only a very old, unmodified, rusted and dust encrusted Yaesu FRG-7. His published results and amazing recordings usually runs rings around the rest of us with all the fancy gear.

I assure you Mike, if the TT RX-340 was the best radio in the world then they would be selling far more of them than they actually do and the second hand market for them would be pumping, but the recent sale of a TT RX340 only raised $2750 hardly a big vote of confidence in it when Drake R8B's are selling mostly for more than the owner originally paid.

This question keeps popping up on this newsgroup. Wellbrooks are not
shielded.

I still like the ALA100 because you can roll your own antenna.

Show quoted text -

DE - "La Raza"
1 - Does not mean the White Race or people from Europe [.]
2 - Does not mean the Black Race or people from Africa [.]
3 - Does not mean the Yellow Race or people from Asia [.]
4 - Does not even mean the entire Brown Race or people of
Mixed within the Americas [.]
LA RAZA does mean the Mixed Race Peoples of Mexico
who take Pride in their Native American {Indian} Ancestry.
* This is "La Raza" {The People} an to Them 'you' are either
"OF" 'The People' -or- NOTHING [.]

* The Political Leaders of La Raza want the Total Dominance
of 'The People' in what they define as Aztlán and the subjugation
of all others [.]
* If most of MEChA's printed literature could be translated and
printed in German : The vast majority of modern day Germans
would instantly call it as Neo-NAZI-Propaganda and label it as
RASIST [.]

OBTW - I am Browner then your average Heinz-57-American.

Cuhulin,

Illegal Aliens means that they are 'Aliens' {They are Foreigners} :
Who are here Illegally {They have broken our Laws} and simply
want to do things their way without respect of America - Our Culture
- Our Traditions - Our Heritage - Our Values - Our Way-of-Life
- Our System of Government - Our Social Institutions - Our Language.

Immigrants are Foreigners who are Invited Guests :
Who are here Legally and Who wish to become Americans
in every sense of the Word.

Dear Sir/Madam

Be patient. Probably within the next month Amazon themselves, J&R Music World, or someone else, such as eTronics, will have the radio featured at your target price (or very close to it) and with free shipping. This has been the case for the past couple of years. Last year I bought two units from Amazon themselves for $129.15 each and the shipping, even for one unit, was free.

So just keep checking Amazon.com and/or J&R Music World < http://www.jr.com > and wait for your price. You will want to check daily from now through New Year's Day (one year J&R themselves - not through Amazon - offered a terrific deal on the ICF-SW7600GR right after Christmas) and with any sort of luck, you'll be rewarded.

Best,

Joe

P.S. If, however, this year no one offers a "great price" for this radio and you still really want it (and I, of course, highly recommend this radio), I should suggest that if you are going to pay the general going rate of $160.00 you buy it at that price from one of the established radio dealers such as AES or Universal Radio where you will get positively excellent service both before and AFTER the sale.

> cuhulin,the T Model Ford car

I have nothing against Chuck Harder ... now.
CH was on the air for the first hour on Monday, Nov. 20, with Dr. Jerome Corsi, I presume ... ha ha ha ... .
Both DJC and CH lambasted President Bush, whom I wholeheartedly support ... but it was really weird because I didn't care. The second hour was taped, as was yesterday's show.
Just read an Atlanta Journal-Constitution op-ed by former Georgia GOP congressman Bob Barr, that also slammed Bush, but in a more subtle, nuanced way.
Again, I didn't care.
I think it's because I've finally concluded that CH is really on his way out, that "For The People" is going off the air very soon. Because of this, this will be my last Google posting.
It's been real, and it's been fun, but it hasn't been real fun. I'm gonna miss all this - and CH too - but life goes on.
I'm trying to recall when my first posting was ... I believe it was early 1996, when I bought my very first Internet-capable home PC - a Toshiba Satellite notebook with a 75-MHz processor and a 14.4 Kbs modem card (I'm not kidding). Back then, getting on the Web and "publishing" my thoughts was (as they said back in the 1920's) "the bee's knees."
Today, it's so mundane, it's just not worth it anymore - to me, at least. Better to leave it to others who really have something to say.
Even if CH is staying on the air for the time being, I want to go on to other stuff - what, I don't know right now, but (as they used to say on "Star Trek" - or is that "Star Drek"?) there's a whole galaxy of things to choose from. I'm sure I'll find something interesting to occupy my time.
So I say, good night and good luck.

Dear Sir/Madam,

A quick reply: No one, certainly not you or me, can predict the future of Windows (or Mac or Linux) operating systems and their backwards compatibility.

Reread my post. I AM using the AR7030 Plus as a virtual SDR with "RxWINGS" (but this radio has an advantage of being able to be operated stand-alone should a computer control program for this radio not be written for some hypothetical future computer OS).

Go to AOR-UK's site. You will see that the AR7030 Plus was/is the receiver of choice for DRM experiments and, in fact, any AR7030 can be modified to receive DRM (which, in any case, in my opinion, will not be successful for overseas transmissions).

Best,

Joe

By and large I would have to agree that a lot of the receiver reviews are subjective, particularly when it come to high end and "quasi-high end" units where sensitivity and overall selectivity are not the main issues. Personally, I've always liked the Icom R72 despite poor reviews and the lack of controls that the R71A has for example. I loved the capabilities of the NRD-525 but after 2 of these receivers, the hiss and audio quality just drove me nuts. The R75 was probably one of the best overall receivers I've used (after doing the AGC/AM sync mod), but I just didn't like the "feel" because I tend to be a "knobulator" and I sold it and kept my old R70 which requires a lot of knob twisting and button pushing. I'm starting to really appreciate the Kenwood R-5000 that I just acquired a few months ago. It certainly has the best audio and is the quietest receiver I've had.

That would be important to the elderly listeners of that kind of format.

I have to say, this topic is of tremendous concern to me. I have also thought long and hard about it, and I have thought long and hard about posting this message. To the people that wish to focus on shortwave, I apologize for contributing this way to this forum, but the political interest here seems strong, so here I go.

I am white - quite white, in fact, massive amounts of northern European stock in my genetic background. Blond, blue eyes, the whole schmear.

I grew up in a house where, at best, grudging acceptance to other races was typical, and outright rage against them was not uncommon. Sometimes it was for really unimportant things, and much of the time it was for reasons that, under close scrutiny, were more person-by-person than related to the race as a whole. Rather than absorb all of that mistrust and occasional hatred, I managed to be suspicious of the rhetoric I heard and examine the issues more closely - as I still try to do today.

With the usual occasional failures that we all have, I have always tried to look at the positive aspects of each person, each race, each culture, to achieve an appropriate balance in my thinking about it. The international back-and-forth of the Mexican culture has thus never really given me much pause for concern until the last five years or so, when it seems like there has been an intent to not only take minor advantage of the U.S. economic and cultural system, but perhaps even to take it over, overwhelm it, and maybe even (unintentionally?) change it.

Even at the schools my child attends, the Latino students there speak of "payback time" and etc. with regard to Mexican immigrants moving back north and taking over California and other areas. I am not sure what they hope to accomplish by bringing a total blanket of Mexican culture into every nook and cranny, while pushing out the system that has been established - but it seems to me that they pursue this course at their peril, and everyone else's too.

The U.S. system, despite not being perfect, despite leaving many Americans behind and despite its natural evolution in one direction or another, has nonetheless worked very well for most U.S. citizens and

has lifted the economies of many nations abroad. It has, in direct and indirect ways, done this for Mexico. It has done so while at the same time allowing gradual but welcome improvements in resource use, utilization and conservation, as well as reduction in rampant population growth, and I think this very positive. I am greatly concerned that the trend being bandied about, that of cultural absorption of the U.S. by the Latin American culture, will bring about considerable damage to this system and start the U.S. economy (and as a result, much of the remainder of the world) down the wrong pathway. For all of its good points, the Latin American culture has not been one of giving everyone a fair shot at economic independence, but rather open flagrant corruption and vigorous concentration of wealth in the hands of the very few (even moreso than in the U.S.). It has also not been one of lifting people out of poverty and improving population parameters and resource utilization.

If there is any one reason why I take the position of strict border enforcement and enforcement of requirements for legal citizenship, it is this. Whatever else negative one says about the U.S. (and I sometimes have plenty to say), it still has an economic system, based firmly in its past northern European culture, that represents the best hope for spreading reasonable economic vitality and properity worldwide. This keystone needs to remain, and I am not at all sure that it can if massive unadulterated Latin American influence is allowed to plunge the U.S. into cultural and economic vagueness. In short, people coming here from LA, as from anywhere else, need to understand where this U.S. system comes from, and to recognize its value, if the heart and soul of it are to be preserved. They will not be doing themselves a favor otherwise.

It should be of tremendous concern. It is your children's future that is at stake.

This has nothing do to with "race" or Mexicans reclaiming territory - taht is a smoke screen. It is simply one of many methods instigated by the Socialist International, including elements within the U.S. elected government, to impose Socialism upon the capitalist economic state of the U.S. The key to their success is to dismantle the key to capitalism's success - the hardworking, intelligent, well educated and very successful American white male.

You can watch the dismantling occur in your public schools including public Universities by teacher Unions and teacher certification programs which indoctrinate fledgling teachers with propaganda in their required "Social Justice" curriculum.
http://www.wgnradio.com/weblog/archives/miltsfile/2006/11/21/index.html#a004077

What you need to know is that Socialism has always failed everywhere it has been implimented throughout history.
You are currently witnessing the social and the resulting economic destruction of the European Union which is just another failing Socialist system. It is a slow process and relies on demographics. In the next two decades, wiith the current rate of immigration and a native European birthrate below replacement levels, Europe will be occupied by foreigners - mainly M.E. islam-0-facists. This native birth rate trend is now almost impossible to reverse - too late. Russia is just now beginning to experience the same phenomenon. Fortunately the U.S. is in better shape, just barely. But the Socialists are working overtime here in the U.S.

Watch for the
Left-wing,Neo-Libs,"Progressives",Socialists,Islam-0-facists,Communists to create a third political party just prior to the 2008 Presidential elections. They will do this to split the vote and force the Democratic Party to succumb to their political demands or else risk losing in 2008.

You have been forwarned!

Rather than turn a portable into a non-portable for half a day it is
much easier to pop a new set of batteries.

Out-of-Wedlock Births Hit All-Time High in U.S.

The increase in births to unwed mothers rose most sharply among Hispanics.

...the number of unmarried-couple households with children has been climbing, hitting more than 1.7 million last year, up from under 200,000 in 1970.

You need to learn what SDR "Software Defined Radio" means. Hooking up a computer to an analog radio is not a SDR or even a "virtual SDR". Whatever that means.

"Joe Analssandrini" <analssandrinij@yahoo.com> wrote in message news:1164208057.406682.143750@e3g2000cwe.googlegroups.com...

2272. Re: Radio Shack Black Friday Ad

Newsgroup: rec.radio.shortwave
Date: 2006-11-22 17:58:59 UTC
From: Will <wgmartin99@yahoo.com>
Message-ID: <1164218339.803073.27830@m7g2000cwm.googlegroups.com>
Source record: 98412
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

Umm, no. There are two radio items in the ad; here's what I sent to
the DXLD Yahoo group:

Hi, all!
Got a Thanksgiving sale flyer from Radio Shack yesterday in which
they list their special sale items for that day and the following
weekend. On the Friday/Saturday/Sunday page they list the
analog-tuning AM/FM/SW crank-up radio with flashlight and
cellphone charger #20-238 at $19.99; this one has the RS
name and not Eton on it, and the cosmetics are different from
the Eton models. Regular price is $39.99.

There is also a handheld scanner #20-528 at $99.99 (regular
$169.99); they don't mention what the model # is, not give
any details of the frequency coverage, but they do say it is
"Triple-Trunking" and has 1000 channels.

For what it's worth...

73, Will

hi,

i have the opportunity to purchase a drake r8 or r8a. the r8a is about $100.00 more. is the difference between the two worth the $100.00?? right now i am using a palstar r30CC, nice radio will i see abig difference in performance with either the r8 or r8A.

thanks in advance, john

Isn't Black Friday the day after Turkey Day? The reason I ask is I am thinking about buying a new Toshiba 27 inch flat screen CRT tv set.A few weeks ago I saw that Cowboy Maloney's Electric City stores sell them for $325.00 whereas the Sears store sells them for $330.00.I want to save a bunch of money on buying one of those tv sets.

Hi,

Anyone know anything about: SHARES (SHARED RESOURCES EMERGENCY SERVICES) ?
Apparently some kind of inter-agency net.

Looked in Google, but couldn't find much; what there was, wasn't all that
informative.
e.g.

- who/what they are ?

- frequencies and modes used ?

- much traffic on ?

Thanks,
Bob

Thanks for the correction. 9580 kHz was the number I meant to type. I'm listening to the buzzing noise now, 2:35 p.m. on the east coast of the US, 1935 UTC.

No worries...you had 9580 in the subject line and 9680 in the message,
but I figured you were probably right the first time.

2280. 9.830 Interference and noise

Newsgroup: rec.radio.shortwave
Date: 2006-11-22 20:06:40 UTC
From: Sanjaya <sanjaya_49@yahooNOSPAM.com>
Message-ID: <k529h.2861$1s6.503@newsread2.news.pas.earthlink.net>

Anyone know what the horrible noise is on 9830?
That and a competing station are making DW impossible on that
frequency here in east Tennessee USA at 2000 UTC.

Noise is ???
Other station and language are???

2281. EiBi B06 available

The old WUN club had the freqs. They are on yahoogroups now. It is
either uxdf or utility_listening group. I found some shares frequencies
in their files section, but can't post them as it would violate the
group rules. However, what I didn't find was what the old Wunclub had,
namely the shares frequencies with schedule. The test the HF I believe
Wednesday at 10AM PST, not exactly a good time of day for shortwave. I
listened to the test once about two years ago.

I knew President Bush should have fired all the Clintoon people when he
got into office and started everything from scratch. The Clintoon people
couldn't do anything right. Most of all wage and win a war against terror.

LBJ: 'Those SOBs Will Never Embarass Me Again' www.rense.com

Seeeeee,,,,,,, I told y'all before LBJ had something to do with JFK being murdered.I have figured for many years he had something to do with that.LBJ was standing on the sidewalk with some other people in front of the Texas Book Depository building when JFK was murdered,he wanted to see it first hand.But did Jack Ruby really shoot Lee Harvey Oswald or was he shootin blanks? There was no blood.A little girl standing on the sidewalk turned her head very,very quickly toward the grassy knoll.Lee Harvey Oswald did not murder JFK.I was at ammo school at Fort Knox,Kentucky when all that stuff was happening in Dallas.To tell the truth,I wasen't sad either.I was getting ready to go to Vietnam and I had other things on my mind.VPs ''shootin'' prezs,so what else is new. cuhulin

I had to be right sooner or later. 9580 is coming in loud and clear
right now, 9:00 p.m. on the east coast of the US, or 0200 UTC, on a
DX-398 using the whip. It is China Radio.

yes, that fuzzy black one is unique indeed! it DOES feel rubbery, and is one good looking radio. i have one of those and i also have a banana yellow one! (the yellow one is the one i use at work) the mini 300 comes in several colors. you do know that the 300 has sw broadcast bands, with huge coverage gaps in between? that it is analog tuning? its selectivity is wide as the open sky? that it drifts like a message in a bottle? that its tuning knob is so sensitive that it ZOOMS off channel if an atom bumps against it? i am not dogging this radio, i LOVE my mini 300! i use it more than all of the others combined! but you do need to know what you are buying. the mini 300 is like the sw equivalent of the little am 6 transistor pocket radios of the 60's and 70's. its handy and convenient and fun. it has a personality and it takes some getting used to if you want to get the best out of it. it will reliably tune in all of the big broadcasters, and it will surprise you with some occasional dx.(ONLY if there is no other station on the dial even NEAR the frequency you are tuning to) it will shine best way out in the sticks..... away from electronic interference. its a wonderful toy! if you want a REAL sw then i can recommend the sangean ats 606. that radio is an absolute jewel! (its three times the size of the mini 300, but four times the cost!) it has great battery life, and it has continuous coverage and is fairly sensitive and selective. its also a program listening type of radio but it is small and very nice. for a serious sw receiver look at the sony 7600 that they have been suggesting to you. it has ssb, synch lock and is still a step higher in sensitivity and selectivity! (yes, but its the size of a hard cover book, FIVE times the price of the mini 300 and is a little rough on batteries) each different radio has its purpose and each is a great buy. you could get two if you cant choose. the mini can be used while hanging from the back of your ball cap while you are riding, its sweet and simple and i use the controls with one hand reaching behind my head. the antenna sticks up solid and straight and the radio chassis couples to your head for counterpoise just like you were holding it in your hand. then at night you could use the more complex radio for better reception. you can use both hands and your eyes because you will need them. it could be the best of both worlds. imagine swling all day and then all night! and riding my bike too! hell, if i had a small telescope to shoot some stars late at night then i would never come home!

Get the R8A for a number of reasons: more channel memory, better communications (many control programs wont work with the R8, only the R8A and R8B), better ergononics with the bandwidth and modes control buttons.

Hi Miso,

I was just making a point for Tekamon. I really like them and know
they are not shielded. I'm hoping to get an ALA-100 for Christmas so I
can experiment with larger loops. It's obvious that Andy has a good
quiet preamp design and this,coupled with a carefully designed balanced
antenna, constitutes the 'magic' inside a Wellbrook.

Well, looks like most sensible people have your posts blocked, other
than myself and the uninitiated... so they never see your posts to
reply.

Me, I still find your idiocy to be somewhat entertaining... but in
time, I too shall tire of it and decide to "clean up my boards".

From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <FYudnQdjNfMY0_jYnZ2dnUVZ_r6dnZ2d@comcast.com>
Source record: 98473

I went to my local Radio Shack a couple of weeks ago to pick up a roll of 4-conductor telephone cable. I needed to make a couple of extension cables. The salesperson told me that they don't carry such an item. When I explained that I purchased a roll of this stuff six months ago, the manager told me that they just don't carry such an item, and could she help me with something else? I told her that I would look around and see if there was anything else that I needed.
I went to one of the middle aisles and picked a roll of the cable (778-367) that I needed, and that they didn't have in stock.
I showed the manager where this stock was kept. I guess they hadn't done any inventory with this relatively new staff yet.

I went to the Radio Shack in Tonopah, Nevada. Tonopah is one of those old mining towns in Nevada where once the mine went belly up, the town nearly folded. This store was a combination Radio Shack and Western Auto (a car parts store). Now the amazing thing is this Radio Shack was the best stocked store I ever saw. Even more shocking, the store manager knew what he was doing. When I mentioned this was the biggest Radio Shack I ever saw to the store manager, he told me that the nearby Tonopah Test Range and the Nevada Test Site used this particular store, so regarding components, they had at least one of everything in the Radio Shack catalog.

That is about par for the course for Radio Shack these days. You want a
cell phone? Nope, already got one. You sure you don't want a cell phone?
They still have some pretty decent scanners and decent shortwave radios
but after that you can forget it. There are probably a good dozen of
them within about 40 miles of me and I can't recall the people being of
much help at any of them. If you are looking for hookup wire, resistors,
etc, Buddy you are on your own. Hate to see it though and frankly it
shows that we are a consumer society, not a producer society which
explains the lack of knowledge and know how that goes into the
conveniences. Not a pretty picture.

It *IS* true. The Snopes urban legend web site has full details at
http://www.snopes.com/politics/sexuality/walmart.asp

Now that Miller Brewing donated $30K to the illegal alien marches of
this past Summer, and now that Walmart has turned against family values,
I've cut off doing business with both companies. Political correctness
of that kind is endangering this country, and we have to fight it.

For those of use who went through CD training, Jericho is an "example
of what not to do".
The only thing this show has going is the human drama. Everything else
is too bogus
for words.

My friends and I watch it, take notes and compare the gaffs we have
seen. Way too many
to list here. The alt.survival and misc.survival groups have ongoing
threads about Jericho, but even they are way to uncritical.

The show reminds me of "Father Knows Best" or "Leave it to Beaver"
meets "Mad Max",
or Chris Carters "X-Files". US parachutes, dropped by Chineese aircraft
with
Chineese supplies? More like Supermans Bizaro world then any variaiton
on reality
that I can dream up. Of course I don't smoke dope, so maybe that would
make
the show more "real".

Any group of people so uniformed as to try to lay an "ambush" against
men with military
weapons in such a clownish manor would be worm food. See U-tube for
last weeks "exciting" show. Or the week before in Rogue River with the
RavenWood, er Blackwater
mercs letting or heros get away is just too funny.

EMP isn't going to stop your Rolex.

And given the lack of running water, everyone looks a damn site cleaner
then I would
expect.

So Watch the show, and enjoy the fun. It is the funniest thing since
"Voyage to the
bottom of the Sea".

Terry

Oh, like when 'Sparks', using a BC-348, monitored Radio Moscow while
at 200 Fathoms?

In one of the early episodes of 'Jericho,' though, Hawkins WAS taking
CW on HF.

I believe he was using a VHF receiver to do it, though.

Of course it will. If you were a rich idiot who bought a FAKE one.
I thought it was a great inside joke.

WHat bugged me about that scene was if you could see a high altitude
blast, complete with EMP, you probably got hit with so much raditation,
that the show wold not last the episode.

> So Watch the show, and enjoy the fun. It is the funniest thing since
> "Voyage to the

What I find is the problem with it is that the people live like there
will be a truck with food showing up tomorrow. Not very much conservation.
They expect that food will suddenly fall out of the sky. :-)

Geoff.

Hi Folks:
For about a wek or so, I have been hearing a strong pulsing
interference on top of WWV at 10mHz. It's rythmic most of the time,
two pulses/second maybe, and then there is a burst of garbage pulses
that go on for 30 seconds or so. None of it sounds timed by anything
with a sync. It sounds like someone doing it or something flashing over
or arcing. It sounds like the individual pulses are pretty short, but
long enough to hear that the frequency does shift a little.
Is anyone else hearing this? Maybe it's local to me..
Harry

> r2000swler@hotmail.com wrote:
>> So Watch the show, and enjoy the fun. It is the funniest thing since
>> "Voyage to the
>> bottom of the Sea".

IMHO it's very accurate. It depicts a world that has not seen the
Soviet Union in 17 years. While the fall of the Soviet Union was good,
it signaled the end of the awarness that the U.S. might be attacked. Even
9/11 did not bring it back.

So the people of Jericho live in a world were there is no need to prepare
for anything and they did not. Their biggest problem would be a tornado
or freak storm, and everything would be back to normal in a day.

Why would there be shortwave or any other radio for that matter. All
of the battery operated radios would have been wiped out in the EMP,
and the tube ones died when the electricty went out.

There was news and activity on the ham bands, but the one ham in town
did not use his radio, he lent it to the mayor who had someone set it
up who did not want the townspeople to know what happened.

If it was for sinister reasons or just to protect the morale of the
people, we'll probably learn later. The radio itself was destroyed in
the EMP, it was transistorized except for tubes in final part of
the transmiter section.

Notice there is no town or school library? There are some home canned
foods in the storm cellar at the farm, but only peaches and pickles.
No one had a dehydrator, no one canned or pickled, and when the food
started to spoil, they had a great party instead of grabbing every possible
container and canning it.

So it's pretty realistic if you live in a world where things are worthless
if they are not new, food comes from a supermarket, electricity from an outlet,
information comes from the internet, and everything is delivered
"just in time".

I see that here, there are NO canning supplies in the entire country
and there is only one company that sells food dryers. The guy that
imports dryers is trying to get a license to import vacuum sealer machines
for home use, but they will be equivalent to a week's wages for the average
wage earner here.

My advice to you is to watch it as warning.

Geoff.

I would respectfully suggest that, in your example above, if someone
spent 400 bucks of their money without having a clue what they were
buying, forget being seriously pissed, they would be seriously stupid
and deserve what they (don't) get. :-)

I don't know if they even have much decent shortwave stuff anymore. The last time I went to one, most of the Grundig/Eton stuff was gone. They have a few of the really low-end pocket models, and the "Red Cross" emergency radio, but other than that it was mostly small Radio Shack brand models. I did notice they have a Radio Shack knock-off of the S350, but that was about it.

Personally, I wouldn't bother with either. I'd save some more and get
an R8B.

I have an R8, and it's an average performer at best. The sync is
useless, and the "no you can't use the preamp on MW" is constantly
annoying.

My Satellit 800 routinely outperforms it.

Mike

Why are these no-code idiots so DEFENSIVE? They're winning! What have these morons got to have an attitude about? It's us REAL HAMS...us CW operators that should be slinging the mud. All they have to do is be conceived, then try to figger out how to push the mike button now and...voila...they're so-called "hams." And the puff bags in Washington and Newington have handed them all the spectrum to use for their CB operations.

SLOW CODE...keep at it. I think your comments are right on the mark.

How close was it? It was close enough to see overhead. Would that be
close enough?

You also don't know the kind of bomb it was. In two years there may be
an EMP bomb that has been under development and kept secret.

>>and the tube ones died when the electricty went out.
>
> yet there's enough electricity to run the happy hour pub with its
> ceiling mounted TV

Not after the EMP. Everthing died including the electrical grid. For
all we know that may have been the source of the EMP (which would mean
that radios still worked).

Now that there is electricity again we'll see what comes out of hiding.

Thing you have to keep in mind is that the closest thing they have to
anyone with real technical knowledge is an insane ham and a high school
science teacher with a bad memory.

They havent even set up some sort of telegraph between the bridge
and town. It does not need to be electrical, there were mechanical
telegraph systems long before electrical ones.

IMHO you are judging it as if the cold war never ended, they are
acting like it never happened. Having come of age in the 1960's
I really think it's an accurate depeciton of what would happen.

In the late 1960's I was thinking of how to turn a walk in closet
into a fallout shelter and photographic darkroom. People like the
ones in Jericho were trying to use fallout shelter loans to build
in-ground swiming pools.

Geoff.

While it has it's moments, and a few "inside jokes" like the fake Rolex,
it's not really funny.

Of course it might be because I live in a safe part of a country that was
under constant missle attack for over a month. In the north, several
hundred rockets arrived each day, destorying the infrastructure, killing
people, wiping out crops and livestock and forcing people to live in
shelters for over a month.

We still are being hit with rockets in the south, killing people and
destroying homes, schools and jobs, every day.

To you it's one big joke because you are so well informed and so smart,
to me it's a prohpetic vision a world filled with ignorant people
who little or no practical education and average intelligence.

To keep it on subject that's why I check the battery in my FR-200 once
a month to make sure it will take a charge. The original one died.

On the other hand, I'm working on things that would help prevent the
ignorance highlighted in Jericho, but that's beyond the scope of this
newsgroup.

Geoff.

A multi-megatone device going off at ~400 miles up would produce
minimal
surface effect except for the EMP and the optical pulse which would
likely
fry the optic nerves of anyone looking at it. And given the double
pulse
effect of thermo-nukes, the first dimmer pulse would attract the views
attention just in time for the whammy.

You might want to take this over to misc survivial.

Real data from military studies about EMP effects and containment have
been linked to.

I will stand by my comments about it is high humour. They haven't done
anything a wise or prudent group would. An example of what to not do.

Terry

That's the whole point of Jericho. They don't seem to have a library,
the Internet is dead, etc. Not only did they look around at all,
they had no idea that they should have.

Just proves another of my many points-- that you Red voters are nothing but cowards who spend all your time wetting your diapers worrying about a terrorist attack against YOU which will NEVER HAPPEN.

Me, I spend my time worrying about totalitarian attacks against our freedoms and the Constitution which ARE happening, and have never been committed by any Islamic terrorist, but by those who claim to be 'protecting' us.

Buck up and be a Man, for christ sake. Stop worrying about the terrorists who are never gonna get yer momma. Stand up for freedom! Be a Patriot in deed as well as empty, fascist-enabling words. Fight the REAL "enemies of freedom".

Or just go on BEING one of them, I suppose.

again, you are right. a guy should know what he is buying, that is why i am surprised that the celestron site gives absolutely no information on what the unit actually is. who would buy it for $400 on the info given? its not mentioned what the aperture is or what the magnification is if any. both of those are important if shopping for either a telescope sighting device or a small handheld scope. i am left with the knowledge that it has gps navigation and a bad-ass database but you had to tell me that it was just a robotic telrad. how did YOU know? do you have one? perhaps you know if it is mountable like a telrad or is it only a handheld teaching aid? if its not fitted with facilities to mount it to a scope then they sure missed the boat. more people would buy it as a sight for their existing scope than as a teaching aid. hmmmm..... all of this should of been covered on the website. thats where we got started, with an incomplete description by the manufacturer!

That's because Shortwave Radio and Medium Wave DX'ing
is an obsolete hobby pursued by cheap old hambone tightwads
and geeks who can't get laid.

2384. A Thanksgiving Day Prayer by Wm S. Burroughs

Thanksgiving Day, Nov. 28, 1986
by William S. Burroughs
(For John Dillinger In hope he is still alive)

Thanks for the wild turkey and the Passenger Pigeons, destined to be shit out through wholesome American guts -

thanks for a Continent to despoil and poison -

thanks for Indians to provide a modicum of challenge and danger -

thanks for vast herds of bison to kill and skin, leaving the carcass to rot -

thanks for bounties on wolves and coyotes -

thanks for the AMERICAN DREAM to vulgarize and falsify until the bare lies shine through -

thanks for the KKK, for nigger-killing lawmen feeling their notches, for decent church-going women with their mean, pinched, bitter, evil faces -

thanks for "Kill a Queer for Christ" stickers -

thanks for laboratory AIDS -

thanks for Prohibition and the War Against Drugs -

thanks for a country where nobody is allowed to mind his own business -

thanks for a nation of finks - yes,

thanks for all the memories... all right, let's see your arms... you always were a headache and you always were a bore -

thanks for the last and greatest betrayal of the last and greatest of human dreams.

NOTE: A VIDEO of the above Prayer is here:
http://www.youtube.com/watch?v=C7Z_08o108E

Oh, I'm sure there are transformers. Many of the best preamps include
them and there may be input and output transformers for impedance
matching and isolation as well.

The point is, 'tard boy, is that a fake Rolex is not a Rolex and that EMP will not affect a real one.

What part of that don't you understand?

Well thank you so much for the Thanksgiving day prayer there Dr Benway.
You are Dr Benway I presume. I've been wracking my brain for days now
looking for just the right words to express my feelings to my four
daughters and their mugwamp boyfriends. You know how it is when the
family sits down and everyone turns to dad for those special words
offered up as grace. Have a happy thanksgiving and for goodness sakes
please take it easy with the bug spray. I hear the cops will be
setting up roadblocks all over town.

Best regards,
Bill Lee

www.devilfinder.com Effects of EMP

I was in a U.S.Army Nike Hercules Nuclear Missile (ARADCOM) unit at Scott Air Force Base,Illinois and near Pacific,Missouri (SL-60,Charley Battery,Saint Louis,Missouri area Defense) in 1963 for ten months before I went to Fort Knox,Kentucky.Perhaps U.S.Army should have kept all of those units active,that used to be scattered all over U.S.A.and improved on them over the years.All of our troubles are a direct result of those STUPID MORONS in fed govt.If fed govt would just leave us alone we would all be much better off.

My Rolex wristwatch I bought at the U.S.Navy Fleet Store in Hong Kong isn't fake,it is the Real McCoy.

> of a distant mushroom on the horizon

So you did not see the show about the EMP? The pilot had the bomb go off about 90-100 miles away in Denver. The same scene is repeated at the begining of each show. After that everything electronic worked and when the power came back, there even was Internet, TV, etc.

The EMP was from a high altitude blast a few epsiodes later. It occured after a missle launch to the east.

The townspeople watched the missles, mistakenly thought they were going to Russia (by missle Russia is NORTH of Kansas) and then saw a big bright overhead flash, like a fireworks finale on July fourth, but higher. Suddenly everyhting electronic, except for a "hardened" laptop hidden in a basement, died. This included "everything with a circuit board", the power grid, modern cars, etc.

The townspeople just looked up.....

> Maybe they're going to repeal the laws of physics,
> would have to for your fantasy to occur,
> but them I never expected the neocons to shred our constitution either.

What laws of physics? Seems you were assuming the EMP came from a different bomb, which kind of shreds your asumptions.

> Are you even watching the show?

Funny, I can see you are not. Missed the whole EMP thing? Yes, I watch it. Every week.

> They have some interesting characters alright, and I guess any small
> town would have a few unpredictable sorts.

That's the whole point. It's a small town of average people. There does not seem to be a suvivalist, or an Emmet Brown like in "Back To the Future", or even a Mormon (who is required to have a month's supply of food and other emergency supplies).

There are paremedics in the burning school episode, but they never show up at any other time. Most of the time, the only person with any first aid training is the doctor, who is a main character.

> I think you've mistaken me for the original poster, but the show does
> seem to be based on cold war hysteria, and even contemporary scientific

> ignorance.

Sorry, too many people with too little to say. :-)

So far, it seems pretty reasonable to me. A group of terrorists smuggle
small atomic bombs into many cities and set them off at the same time
by hand. New York was able to stop them. The rest of it is based
upon the actions of ignorant people, but too many postings on here
are by people who have not seen the show, yet comment on it.

> In the late 60's I was getting well past my youthful aprehensions of the
> 40's and 50's and well on my way to being a blissful hippie.

To quote Captian Kirk in the fourth Star Trek movie, " too much LDS in
the sixties".

Geoff.

The Sony SW100, which is basically the same design miniaturised, and
has very similar if not identical performance, runs off 2AA batteries,
and therefore cuts them off at a higher voltage which is perfectly
kind to rechargeables.

Incidentally, with resepct to being a bedside radio, not only are the
SW100 buttons easy to distinguish and operate in the dark, but they've
thoughtfully put a little wart beside the headphone socket so that you
can easily find it by feel in the dark.

Did you even bother to read the material at Snopes? Somehow, I don't think that you did, because you pulled out your prerecorded response immediately after jerking your knee.

I don't give a sh*t about your sexuality, but I do take great exception to the in-your-face promotion of homosexuality that the Gay and Lesbian Alliance is all about. Since Walmart has joined (literally) with them, I now take great exeception to Walmart.

There are a lot more of "us" than there are of homophiles, and Walmart is about to find that out. Walmart backed down from not using the word "Christmas" in their stores, and now they are about to get a second lesson in staying out of social politics. I predict that, by this time next year, Walmart will have dropped out of the Gay and Lesbian Alliance.

2400. Re: Sony 7600gr newbie questions

The 7600GR, if you just leave it around for a month or so running its
clock, will badly wobble the weakest cell, which will be reverse-charged
by the stronger cells, if you use rechargeables (which everybody does).

Replace the batteries very regularly even if you don't play it.

I can generally revive the weakest cell using an old charger to
start it off, and then cycling it in a modern charger a few times,
but it would be better not to let the other cells get to it at all.

It's not a matter of running the voltage down to .6V, but that by
that time, the weakest cell is already charged backwards by the others.

10 signals are obsolete and are being officially dropped by most police
departments in favor of plain English. The announcement has been all
over CNN and FNN. Apparently, police professional organizations and
Homeland Security have recommended that 10 codes be dropped, and most
police departments are about to comply.

The use of 10 codes will now be the offical mark of a backward operator,
just as we have always known.

Maybe the christians should practice what you have just preached. I take great exception to the bible thumpers knocking on my door and telling me that if I don't join their church, that I'm going to burn in hell. And the onslaught of phone calls telling me that I need to let their god save me. How much more "IN YOUR FACE" can you get.

I have yet to have a homo get in my face and tell me I'd better bend over and get sodomized, or else.

Actually, both issues are something to worry about. The radio is
designed for alkaline cells AND to use them to retain memory settings.
This scheme works fine, but will overdischarge secondary cells.

Back in 1974 we had a string of Tornados pass through knocking out
power

for just under 3 days. There I was with receivers that were useless because
the mains were down.

I got my ham license 2 months later, joined CD, went through the training
for about 10 years. During the Carter presidency, right as CD was being
turned into FEMA I bailed when I saw how clueless the plan was. In the
event of a nuke out Lexington was to evacuated to the east. Fat chance in
hell. 200K people out in less then 36 hours to where, to eat what etc. I walked
away when I saw there was no meaningfull way to move that many people
within any sort of reasonable time frame.

I have several nice radiological instruments, from the simple geiger counter,
through multi decade ion chamber to a scintilation counter. I paid less then
pennies on the kilo dollar. Not prepared for WWIII, but becuase I am noisy.
There is a spot in the Red River Gorge that has Thorium. I wanted a sample
and found the spot and have some nice samples.

As to educating the masses I gave it up for lent. Those that want an education
can get one with minimal effort. For those who think that a ground or air burst
100 miles (160KM) away will have any imdediate effect, EMP, direct radiation,
thermal pulse, they have my pity. For those that think a 20KT device set off
400 miles up will do more then dazzle a few on lookers, great. However in the
event of a weapon designed for EMP, a multi-kiloton, multi stage device, that
will have serious effects. No fancy electronics with anything with as much as a
meter of cable. Blinded people with problems ranging from tmep flash blindness
to permanent loss of vission with every step in between.And other then keep some
gear in a good farraday cage, there is not a lot I can do about that. If Iran,
NK or China decides to set a 4MT device off 400 miles up over the center of the
USA most of my wonderfull toys will be toast and life will become very unpleasant.
Without our 21st century technology and transportation a whole lot of use will die

because there just ins't enough food to feed the 400K in the greater Lexington
Area. The west coast with no local water would fair even worse. Am I concerned,
hell yes, am I worried, only slightly. There is nothing I can do to effect the course
of "my" own government. And less that I can do to effect NK etc.

I stock food not becuase I think the Chineese or AQ will nuke us, but because
I know we will likely have an ice storm this winter that will make any travel
risky. I have way too many radios, and batteries, and PV cells and a hand crank
genset not because I worry about EMP but because I like my toys.

I still have my CD shelter warden manuals. I stll have my potasium iodate.
And I carry life, health and automotive insurance. Who knows at 55 I might still be
tough enough and smart enough to survie a Jerricho type event. I wouldn't bet
on it, but who knows.

Perhaps the people who survive a near nuke event, or huricane or tornado,
or a blizzard will be those who are prepared. And like in Katrina, those who
expect the "government" to step in and help them will end up like the patients
in the Rogue River Community Hospital.

If you and or your country men every get sick and tired of the rocket attacks you
have the technical solutions to your problem. What I think is missing is the
political and collective will to force the issue. I have no illsusions about my
ability to hold off mercs like Blackwater etal. I insist this show is only usefull
as examples of what not to do and for the "OMG did you see that stupidity".

If you choose to find other meanings great!

I didn't know a Rolex was mechanical. They are way out of my price range.
Please let me rephrase my comment to "An EMP event will have no effect
on electric or electronic watches. Even those made from plastic."

It will fry most newer vehicals, and almost everything else of value that

has a CPU or solid state device.

Terry

Did YOU even bother to read what was written at Snopes?

The only money going back to GLBT was what was sold via the link from the GLBT websites, NOT from any other Wal-Mart store or online Wal-Mart sales. That sort of thing is done all the time, just like rebates from Discover card. It's a tool designed to boost sales. Period.

They don't like to be reminded about that contest. It shows the
difference between skilled and un-skilled. It also gets back to that
liberal political correctness thing. Everyone has to be equal, since not
everyone is good enough to rise to the top, they got to drag the top down.

> the REAL "enemies of freedom".
>
> Or just go on BEING one of them, I suppose.

Just proves another of my many points-- that you blue voters are nothing but retards who spend all your time in the dark not knowing about a terrorists attack plans against YOU which will kill you.

Me, I spend my time worrying about liberal democrat attacks against our freedom of religon and gun rights which is happening, and has always been committed by democrats and liberals, and not by those who are 'protecting' us.

Buck up and be a Man, for christ sake. Stop worrying about the rights you are not loosing. Stand up for freedom! Defend america against terror. Be a Patriot instead of a liberal fascist-enabling words. Fight the REAL "enemies of freedom" the democrats, and those that want to kill us, the terrorists.

Or just go on BEING a retard, I suppose.

LOL

It's hard to mess up a long wire, but if anyone can mess one up, Todd probably can.

I was really hoping Omega one would work out for Todd. So many things he has tried to do in his life have been failures, and I really wanted his pirate station to be success.

Nope, Nothing heard again.

I was really hoping Omega one would work out for Todd. So many things he
has tried to do in his life have been failures, and I really wanted his
pirate station to be success. Something for him he could be proud of, but
no, it turned out to be another one of Todds failures.

A couple of months ago I dozed off on doggys couch and I had a nightmare.My right hand was reaching out and and thrashing around and I knocked my radio (Blaupunkt Derby 691 AM/FM/Shortwave radio) over and when it fell over it bent the top eight inches of the whip antenna over at about a 90 degree angle.When I tried to straighten the antenna up,it snapped off.I am not worried though,I can open it up and wedge the broken part back into the other part and solder the whole shebang back together as good as new with my propane torch with the soldering tip on the torch.

I tend to agree with Mike. There are several refinements in the R8B
that make a significant difference, plus it's probably one of the best
modern investment radios on the market. Buy one, try it out for a few
months, and if you don't fall in love with it (unlikely), you can always
sell it for (probably) more than you paid!

This is a citation from a recent Globe and Mail article

Prepared by the Canadian Security Intelligence Service, the summary says CSIS has "reasonable grounds to believe that the foreign national alleging to be Paul William Hampel, is a member of the Sluzhba Vneshney Razvedki (SVR), the Foreign Intelligence Service component of the Russian Intelligence Services."

The court filing says the man was carrying $7,800 cash in five currencies, three cellphones, two digital cameras and a shortwave radio when he was arrested a week ago at Pierre Elliott Trudeau International Airport in Montreal.

Here is the link for the whole article

Actually, no it won't. Rolex uses a self winding mechanical movement.

Even the good fakes use automatic movements.

Only the cheaper fakes would be harmed by EMP. And that's
questionable, given the steel case sheilding.

It was an FT101F to be exact, I just looked.

> It was a pretty decent rig. One of my buddies from college swore by his.

It and the Kenwood TS-520 were the mainstay of Japanese radios for a
long time. Good solid radios. Easy to use, almost impossbile to damage,
good sound.

Geoff.

Did you read it?? It said that it is "partnering" with the GLA to "promote diversity" and promote non typical gay marriages. Everytime I hear that buzz phrase "promote diveristy" I can feel the little hairs on my neck standing up, because what that really means is promoting non traditional values. Since I have a SuperWalmart within a stones throw of me, its going to be difficult not to go there but this tears it with me and no doubt hundreds of thousands or more of us lowly tradiionalists that happen to believe not only do words mean things but so do actions like this. They really are sticking their noses where they dont belong,,, no pun intended, and I think they are going to get bit in the long run.

Hi,

Have looked all over, and have learned a lot more about SHARES, which is
quite interesting.
But still can't find any of the actual freq's used.

Looked in the Files section where you suggested, but still can't find em.

Understand about not re-posting them, but might you please just
give me the exact Link to where they are, so I can get them myself ?

Happy Holiday, and thanks,
Bob

"The old WUN club had the freqs. They are on yahoogroups now. It is
either uxdf or utility_listening group. I found some shares frequencies
in their files section, but can't post them as it would violate the
group rules"

I wasn't aware of the show but I gather it's about what happens in a small town after some sort of super-duper EMP pulse, more intense than the Starfish prime test which couldn't even manage to burn out mass quantities of early 60s germanium transistor radios.

Wow. An EMP pulse strong enough to destroy everything with a circuit board, yet has no effect on everyone with a central nervous system.

I think I'll stick with domestic shortwave radio for doomsday info. It's every bit as misinformative as TV, but far more entertaining.

Hello,

Saw the term "IP3" used in discussing sw radios.

Guess I'll never learn if I don't take the risk of showing my ignorance, so:
what does the abbreviation
IP3 stand for, please ?

Also, any info. or rumors re a new JRC 545 type (555 ?) radio coming out
next year ?

Thanks,
Bob

Does anyone know of any software that will allow decoding of the DGPS stations in the 285 - 325 KHZ region and show at least the Station ID other then Radio Raft or Skysweerper?

Thanks

Larry

Of course you are correct. But also unfortunately almost all news
groups are rapidly becoming socio-politcal-BS. About all you can do
is killfile the people who constantly post this crap, and maybe all those
that respond. But then you end up with a handful of people left who arent
killfiled.

It wasn't until recently that I encountered an automatic movement in
a fake. I've seen several since. It takes a good eye to spot one.
Watchmakers are on the lookout for them, now.

You can find a decent knockoff Rolex with an automatic movement, the
correct markings, correct weight...for about $250. You'll probably get
ads for them this holiday season in your mailbox.

Thank you so much for your kind words Mr. Lee.
You are indeed a giant amongst the all too
common and the redundant mediocre. I wish you
and yours a happy holiday season, although 98%
of Americans don't even know, that each and every one
of them, including the dates set for them on our
"modern" calendar by the Roman Emperor
Constantine I, have their roots in pagan religious ceremonies
that were often full of large group sexual activities
and encounters which would have made the pages of Playboy
and Hustler magazines blush with envy. I so much get a
chuckle at the holly wreaths, gold balls and Tamuz trees adorning the
altar of the Assy of God Church where my inlaws worship in
blissfull ignorance of their true meaning. Enjoy the holidays!

Best Regards,

The Good Docktor. :)

The purpose amateur radio is communications. Real HAMs can communicate with CW and they also speak English, Spanish, and French. Those who can only speak English are stupid, idiots, turkeys, and are only wimpy HAMs. Real HAMs are also a little narrow minded, intolerant and arrogant. If you are one of those open minded and tolerant people you are not a real HAM and you are probably a liberal, left-wing, homo-faggot.

2472. Re: Sony 7600gr newbie questions

Newsgroup: rec.radio.shortwave

Source record: 98562

Dear Jim,

If you've read some of my previous posts, you know that I do not recommend use of the ICF-SW7600GR with an AC adapter. That being said, should you still want one, the best (and also the least expensive) one is the Radio Shack Model 273-1758 6-Volt 300 mA Regulated and Filtered AC Adapter, $12.99; RS supplies one "Adapt-a-Plug" free with each adapter. The correct one for the Sony radio is 273-1705.

This adapter works well with the radio and injects only little, if any, noise into the signal. There is certainly no need whatsoever to spend $100 for an AC adapter!

Regarding rechargeable battery use with the radio: if you use NiMH rechargeables, 2500 mAh each or more, and you use the radio frequently, there will be absolutely no problems with the use of rechargeables. I suggest that you buy two sets of batteries, $10.00 per set, and a charger in which one set can be left at all times. In other words, as you use one set, the second set can be recharged and the charge can be maintained through trickle-charging. Then when the first set goes flat, it can be immediately replaced with the second set. Some Maha chargers do this and so does the C. Crane QuickCharger. These chargers can also "condition" the batteries and this maximizes their life. I personally have been using NiMH rechargeables in my ICF-SW7600GRs for over five years now and have never had any difficulties whatsoever.

The AN-LP1 antenna is well-worth seeking out as it is an excellent match for this radio. It really improves SW reception. If you find one for $110.00 or less (including shipping), that price is "right."

For improved MW reception, the Select-A-Tenna works well, as does the C. Crane "Justice" antenna, in inductive mode, but the least costly auxiliary MW antenna is the Terk AM Advantage which can be had for $29.95 plus shipping from B&H Photo/Video as well as some other stores. Note that any auxiliary MW antenna must be used as an induction antenna; it cannot be plugged into the Sony's antenna socket. (And also note that the AN-LP1 - or any other SW antenna plugged into the socket - must be physically disconnected for proper MW/LW reception.)

Also note that you MUST put two AA batteries into the AN-LP1's control box. The ICF-SW7600GR will turn the antenna on and off but does NOT actually "power" the antenna as some reviews have stated.

I hope all of the above is of some use to you and I wish you the very best of luck with your new Sony ICF-SW7600GR radio. I believe you will derive much pleasure and edification it.

Joe

Funny post.
No-code ops usually don't give a hoot about getting on the HF bands. They
are content with VHF/UHF communications, and so learning CW is not necessary
since that mode is for repeater I.D. AND NOTHING ELSE.
As far as learning the code, I see that as not only the most productive mode
for HF communication, but as a rite of passage.
The code tests should be more than 5 WPM, IMO.

There is a 3rd option that I'm testing, you can filter key words or
phrases. If a message contains these words its filtered
like you could filter all messages that contain "Boycott Walmart" no matter
who sends them, but if that person wants to
post something 'normal' it comes thru. Naturally Slow Code and Markie are
permently killfiled, but I think this filter
system once set up (which might take a little while) should work good :)

Frank and Telemon, I have great respect for your knowledge and the
accurate posts you both have made over the years.

EMP could be a nothing or a very real threat.

<http://www.globalsecurity.org/wmd/library/report/1988/CM2.htm>

While I dislike Wiki, in this case the data agrees with that I gleaned
from
many open sources such as, but not limited to military and telecomm.
And it is in one easy to digest meal.

<http://en.wikipedia.org/wiki/EMP_Pulse>

I do know the US military is very concerned about EMP. I helped a
contractor

install a radio relay and I was impressed by the, even by my standards, fanatic
steps taken to manage EMP. Double farrady cage, every i/o line was either
optical or had multi-stage polyphaser EMP clamps. Much beyond what is
required to survive mere lightning. I am not revealing anything here that isn't
already easy to find.

If there is interest I will post the links to some of the various military manuals
that go into way too much detail about the risks and steps that SHALL be taken
to mitigate EMP. This really belongs in a survivial group more then this group.

Sorry for the 3rd post but this was also too interesting to ignore.
<http://www.usace.army.mil/publications/eng-pamphlets/ep1110-3-2/toc.htm>

I hope I have demonstrated that at the very least EMP or to be more
accurate,
NEMP is real and under the right, or maybe the wrong, circumstances a
major EMP event will change all our lives.

2486. Re: Querstions on IP3, and also Re JRC 545 New Radio Rumors ?

Newsgroup: rec.radio.shortwave
Date: 2006-11-24 21:28:37 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <BYidneLGBZOY-frYnZ2dnUVZ_oydnZ2d@comcast.com>
Source record: 98576

IP3 is a figure of merit for dynamic range of a mixer. As already mentioned, the higher the number, the better the unit.
Basically, the measurement consists of using three RF generators, with each RF port generator running through a 6dB attenuator, a low-pass filter, another 6dB attenuator, and a combiner. The output of the combiner is connected to the RF port of the mixer under test. The reasons for the 6dB attenuators are twofold; first of all, they provide 12dB of isolation for the RF generators that is added to the 25 or so dB isolation that the combiner already has. This helps to prevent the generators from "talking" to each other, thus preventing IMD to be generated in this portion of the test setup. The second reason for these attenuators is to provide a broadband resistive termination for the low-pass filters, so that they maintain their design characteristics.
A third RF generator is connected to a 3dB attenuator, a low-pass filter, and another 3dB attenuator to the LO port of the mixer. The reason for the 3dB attenuators is to provide a wideband resistive termination for the low-pass filter so that it retains its design characteristics.
The low-pass filters are very important in this test setup, since when the signals are squared up in the switching function of the mixer under test harmonics can cause measurement error. Mini-Circuits has a requirement of at least -65dBc for all harmonics present in the test setup. The 6th and 9th harmonics can be especially troublesome when making IP2 and I.F. port return loss measurements.
As far as injection levels, the LO generator is set to the level required to illuminate this port. For a Level 7 mixer, this would be +7dBm, or 5mW. With this type of mixer, the level of each tone at the output of the combiner that is applied to the RF port of the mixer needs to be at least 10dB below the 1dB compression point of the mixer. Since the 1dB compression point for a typical Level 7 mixer is abour 0dBm, we would be talking about a maximum level of -10dBm for each tone. -20dBm would be a little bit better, just to make sure that you are operating within the linear range of the mixer.
Now that we have the proper test setup, we connect all of this to the mixer, and we connect the output port, in this case the I.F. port, to a spectrum analyzer, also making sure that the spectrum analyzer is set up for maximum dynamic range so that IMD isn't generated in this portion of the test setup. Your test setup needs to have an IMR at least 10db better than the device you are measuring, in order to minimize any measurement error.
Use at least 50kHz separation between your input tones that are applied to the RF port; the reason for this is so that phase noise sidebands from the RF generators don't cause measurement error.
Taking a look at the spectrum analyzer, you will see five major tones; these are, the LO, which should be suppressed by around 30dB or more, an upper sideband tone, a lower sideband tone, and upper sideband and lower sideband IMD products. These two IMD products are your third order terms.

Next, measure the difference between your upper sideband tone and your upper sideband 3rd order term. Do the same for your lower sideband terms. This difference between the desired sideband and the 3rd order term is referred to as your IMR.
The reason for measuring both of these terms is because oftentimes, one of these measurements will yield better results.
Choose the worst result when characterizing the mixer.
IP3 is calculated by this method: IP3 = (IMR/2 + Pin), whereby Pin is defined as the power level at the output of the combiner of only one of the input tones that are applied to the RF port of the mixer.
Some of the reviewers make this measurement using a 5kHz offset of the RF generators that are applied to the RF port of the mixer. This measurement is only valid if the noise sidebands of the generators are run through a very selective filter, such as a crystal filter. In this case, you need to make sure that these levels are well below the level where IMD would be generated in the crystal filter itself; also, too much power can shatter a crystal filter. If I remember correctly, it would be in the ball park of +10dBm.
I remember when I was testing FM communication systems, the test setup would be similar, with the exception that the spectrum analyzer wasn't needed and the LO generator wasn't needed since the actual receiver's LO would be used in this case.
Now, you still need three generators, this time using a 3-port combiner at the RF port of the input stage of the receiver.
The two interfering RF port generators would be modulated with a 25% modulation index. First of all, only the desired signal RF generator would be switched on, using a level that would provide a 12dB SINAD. This is equivalent to using a 10dB S/N+N ratio in an AM system or a 5% BER in a digital system. Next, the second and third generators are switched on, increasing their levels until a 3dB degradation is noted. Now, these two generators need to be set to frequencies so that their difference frequency lands on the desired channel where you are making the measurement. Once again, you need to do this with upper sideband interferors and lower sideband interferors, since the rejection will not be symmetrical.
The difference between the levels of your desired signal and your interfering levels is your IMR. IP3 is calculated in the same manner as mentioned before.
It is no trivial task when making this kind of measurement. The measurement itself isn't difficult, but the main thing is to make sure that test setup created IMD doesn't cause any measurement error. After you do this a few times, it becomes relatively easy, that is, until you have to characterize a device such as an RF switch that might have an IP3 of +50dBm. This requires an IMR in your test setup of at least 110dB. Now, that takes a bit of work!
I hope this long-winded explanation helps.

Pete

Before plumbing and bathing, sex was far more restricted. Oral sex was limited to blowjobs, and then usually only when running brook water was present or after swimming on beaches. Cunnilingus or analingus or anything putting a head in a crotch was dangerous and revolting. Anal sex was, even more than now, a death warrant.

Venereal disease was rampant and pregnancy unavoidable whenever penises entered vaginas, pulling out or no pulling out. And since the average human lifetime was barely 35 there wasn't that much fucking one could get in in a lifetime.

2491. Using the 75S for swl'ing

Newsgroup: rec.radio.shortwave
Date: 2006-11-24 22:11:11 UTC
From: Bret Ludwig <bretldwig@yahoo.com>
Message-ID: <1164406271.034249.152590@45g2000cws.googlegroups.com>
Source record: 98581

The Collins S-line is not exactly ham band only. If you have enough crystals you can have any 200 kHz, I think, of Hf spectrum between 3.4 and 30 MHz except for 5 to 6.5 MHz.

Using a remote RF gen with programmed steps instead of the xtals is possible with only minor modification, I think. But perhaps an internal synth would be possible, and could be made quiet enough to not detract from the superb performance, better than most synthesized icoms and so forth.

I'm told that for specific 200 kHz swaths, a 75S or KWM is a much better receiver than the 51S-1, which has a very promiscuous front end.

Any thoughts?

where do you get yoursample? Most Notechs of my aquantance would LIKE
HF access but it isn't worth the effort

>They
>are content with VHF/UHF communications, and so learning CW is not necessary
>since that mode is for repeater I.D. AND NOTHING ELSE.

wrong althought it is close to useless at VHF and above it has its
uses in EME and at the upper edges of in the microwaves bands for
those interptid folk
>As far as learning the code, I see that as not only the most productive mode
>for HF communication, but as a rite of passage.

"rite of Pasage" their you have the basic Rub of the whole issue if I
may focus the point . I and other NoCode test advocates feel that the
Govt has NO right to impose or support any rite of passage stuff
either in radio or elsewhere

as to it usefulness in HF I don't see it . if am I not going the ehar
the other Id rather deal with a keyboard of deal with another CW mode
Hell where the eye rather than the ear deal with the fuzy mode
>The code tests should be more than 5 WPM, IMO.

there believe or not where we come the closest to agreeing. I see no
value at all in 5wpm test it is should go away (which is what I think
should or should always have been higher to produce a use operator)
the current system which I only supported going as step to ending
testing is Hilary care for the mode

Well, instead of a year, it only took Wal-mart a few days to back away
from their preposterious position. A threatened boycott seemed to do
the trick, just as I suggested in a previous post. Wal-mart is all
about profit; not principle, and they'll sell out at the drop of a hat.
The relevant excerpt is as follows:

"While stressing its commitment to diversity and equality, Wal-Mart (WMT)
said in its statement that it "will not make corporate contributions to
support or oppose highly controversial issues unless they directly
relate to our ability to serve our customers."

"Mona Williams, Wal-Mart's vice president of communications, said in a
telephone interview that the company would continue working with the Gay
and Lesbian Chamber of Commerce and other gay-rights groups on specific
issues such as workplace equality."

"Going forward, we would partner with them on specific initiatives. ...
As to opposed to just giving blanket support to their general operating

budget," she said. -- http://www.foxnews.com/story/0,2933,231259,00.html

See there? Stick up for traditional values, and these people cave in and run away. It's one more win for the good guys. We've got Christmas back at Wal-mart and gay marriage support is out on its derriere.

I love it when a plan comes together.

Is the goal to find free software to do the decoding? The demo mode of skysweeper will run long enough to ID the station. My recollection is I had to set up the radio off by 1khz from the actual frequency to get the software to work. I had the radio in sideband, though I don't recall usb or lsb.

Bret, I can't fully agree with you on several points. The KWM and 75S receivers are pretty good but so is the 51S1. The 75S-3B/C are arguable better when tuned properly and in good electrical condition and in consideration of the available filters. The problem with SWLing, so to speak, is that although movable (read: re-tunable) throughout the HF spectrum, both the KWM and the 75S receivers require an "internal" retuning to maximize sensitivity when the excursion is made outside an adjacent 200 kHz segment. You'll note in the manual a reference to a "field alignment". This is required when shifting a noteworthy amount. The KWM and 75S have limited re-tuning ability via the front panel (preselector). The 51S1, on the other hand, has a fully tracked tuning system throughout the HF spectrum. Price aside, and given a choice of the two types of receivers, the 51S1 would wins hands down, in my mind, as an SWL receiver. Frankly, though, I'd prefer and in fact use, among others, R-390As or a Drake R4C (or "B") and an S&S DVFO-II. But, that's why there are Fords, Chevys, and Toyotas.

There are shares voice frequencies. The first document is related to
SHARES ALE, though I never got around to decoding it.

Sorry for top posting reply.

Does the AN-LP1 antenna have an active amplifier inside? I know that
some antennas may have a varactor diode inside which also requires a
voltage source. I hope to have 7600GR by Dec 25.

I am not looking for a loop antenna. Just curious.

Not any more - just returns an Internet domain seller.

Have a look at Monitoring Times Hot 1000 HF Frequencies and search the page for "SHARES"... http://www.monitoringtimes.com/html/mttopHF.html.

You can import the list into Excel: select the list and paste it to a text file; use data import, fixed width format to import two columns - freq and description. Then you can sort and filter using Excel.

Actually, "SWBC Schedules" is alive at Robert Sillett's SWLog website at http://www.shortwavelog.com/2-swbc.html. Here's what he says:

"The recent demise of the ILGRadio frequency database has adversely effected the shortwave listening community. The creation of the SWBC Schedules is an attempt to address the void.

The SWBC database is directly supported by Shortwave Log v5; however, the data is stored in an open format with nothing to prevent other applications from using it."

It's in XML format so not directly usable and I don't know how comprehensive it is. SWlog depended on ILGradio as did several other applications.

I think the other reference is more accurate. For instance 14396.5 is
14396 on the Grove list.

Since somebody else put it on the net, here is the shares section:
==========

**UNITED STATES GOVERNMENT LISTINGS
++++++++++++++++++++++++++++++++++

*U.S. Goverment SHARES (Shared Resources)Program
==========
SHARES Coordination Network (SCN)
4490.0 Channel 3/SCN ALE Net
4573.5 Alternate frequency for channel 1 voice check-in
5236.0 Channel 1/SCN Voice Net
5711.0 Channel 4/SCN ALE Net
6800.0 Channel 9/SCN BBS Net
9106.0 Channel 5/SCN ALE Net
10586.5 Channel XF
11217.0 Channel 6/SCN ALE Net
13242.0 Channel 10/SCN BBS Net (G-TOR)
14396.5 Channel 2/SCN Voice Net Shares
14898.5 Alternate frequency for channel 2 voice check-in

15094.0 Channel 7/SCN ALE Net
17487.0 Channel 8/SCN ALE/STI Net

SHARES coordination stations conduct a weekly SHARES net on the ten SCN channels every Wednesday from 1600-1800 UTC.

Large scale annual SHARES exercises are conducted in April, August and December.

SCN Operational Levels
SCN Operational Levels are designed to improve the responsiveness of the
SHARES Coordination Network during emergencies. SCN Operational Levels are defined as follows:

Operational Level 3 - Conditions normal. No emergency exists. The ten-channel SCN may be used by SHARES station personnel for training and non-
emergency operations.

Operational Level 2 - Emergency potential exists. Non-emergency operations on the SCN suspended. SCN monitoring increased. Check-in windows established on the national and regional nets to receive Stations
Availability Reports.

Operational Level 1 - Emergency exists. SHARES message support required.
National and regional nets maintain full-period operations to receive Station Availability Reports, to list SHARES message traffic, and to coordinate the processing of SHARES messages.
==========
I recall the test being worst case, such as 5236 being used at during daylight hours.

Hi,

Helps a lot.
Very clear explanation.

Appreciate it.

Thanks,
Bob

Just goes to prove the point further - him and his ridiculous posts need to
be "totally" ignored. Get these groups back to their purpose - or at least
let this goof ball and his stupidity - drop off the face of the earth.
Slow Code hasn't proven a damned thing to say "he" is licensed and to
support he has an "inkling" of knowledge at that - for the subject at hand.

Come on folks, SURELY - you've got better things to do than argue with a
moron.

2526. LED Flashlight Review

Newsgroup: rec.radio.shortwave
Date: 2006-11-25 16:42:08 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1164472928.482893.59070@h54g2000cwb.googlegroups.com>
Source record: 98866

Several months ago I reviewed a LED flashlight that used a magnet sliding through a coil to generat electricity. There were posts that stated that some Chinese LED flashlights on the market were fakes using button cells that could not be recharged. The moving slug was just put in to look good. The one I bought from PRO Hardware was legitimate and has worked perfectly for three months with very little charging required. One way to identify a good moving-magnet flashlight is to put it near some paper clips or such. The magnet is so powerful that the clips will jump at the flashlight and stick to the side. The flashlight in question is 7 inches long is made of clear plastic and has a black ring at the front. It is PRO Hardware number 736N5950. I imagine that there are lots of them around and they would make good stocking-stuffers for those of the Kris Kringle persuasion (not that there's anything wrong with that).

If you speak the word "God" folks don't know if you mean God or god and there are many of the latter - that is little "g" gods. If you really want him to cringe use the name Jesus Christ without cursing.

He is so politically "correct" that he is afraid he'll offend those who hate Jesus Christ. He invited a Church of God minister to take part in one of his "prayer breakfasts" but insisted he could not pray in the name of Jesus Christ. The minister declined the offer!

Who wants to be respected by those who don't respect the Son of God, the Creator of heaven and earth, the Savior of the world? Not me! Let them go to hell believing in their phony gods because that is what they will do. Jesus is THE way, THE truth and THE life. No man comes to the Father but by Him! :-)

The two that I tried provided a weak light with limited electrical
storage given the size of the flashlight. In an emergancy you want
light shining on the object an hand without having to periodically
shake the light. It's really little more than a gadget for xmas.

I'd read the 51S was pretty broad on the front end, so much so that
selectivity from signals at various points was pretty low. I have
never seen one,actually. I have seen LOTS of KWMs and 75S-3s.

What advantage do purpose built VFOs have over generators like the HP
8656B, which can be had cheap if you will accept the rear-connector
versions? (I don't know why you can't just drill a couple of holes in
the front panel and put BNCs on and make up a couple of new cables
internally, for the huge difference in price, either, but that's
another story.)

>
Well it depends. An ongoing emergency, obviously you want a constant
light since there'll be no other.

But "emergency" can mean a blown fuse, and a need for a light to check
which one. Or checking something in a dark corner merely because the light
isn't good there. The advantage of having a flashlight that doesn't use
batteries is that one can just crank it up when needed to get that bit
of light. Time will tell whether the current crank or shake lights serve
that purpose in the long run.

I can remember with incandescent flashlights, how often when I actually
needed the light the batteries were dead. Maybe bad shelf life, but
I'm beginning to think the switches had too little resistance in the
off position, allowing for a constant current drain without enough for
the bulb to light. So you'd not notice that the batteries were draining,
but the batteries were gone when you needed them.

This is amplified by the bulbs themselves not putting out much light
with the lower battery voltages. When I got an LED adaptor for my
Maglite last year (it just fits in where the bulb used to go), I started
off with batteries that had seen use with the incandescent bulb, so they
were worn out at least partially. The light kept going, until I realized
that "oh, the light has become weak, time to change the batteries". The

incandescent bulb would have changed color and put out less light long before that.

And of course, the bulbs would break or burn out, and then you'd be stuck with no light. At least LED flashlights aren't going to have the breaking problem, and it will be some time before they burn out.

So on some level, the cranks and the shakers may be less necessary with LED flashlights, since they work better with lower voltage. But then, that's why the cranks and the shakers have come along at this time, because the LEDs work better than the incandescent with lower voltage and current.

Michael

Boycott Wal-Mart
Why you should wipe that smiling yellow face off your shopping list.

BY JIM HIGHTOWER

Photo by Alex Maness
Wal-Mart is now the world's biggest corporation, having passed ExxonMobil for the top slot. It hauls off a stunning $220 billion a year from We the People (more in revenues than the entire GDP of Israel and Ireland combined).

Wal-Mart cultivates an aw-shucks, we're-just-folks-from-Arkansas image of neighborly small-town shopkeepers trying to sell stuff cheaply to you and yours. Behind its soft homespun ads, however, is what one union leader calls "this devouring beast" of a corporation that ruthlessly stomps on workers, neighborhoods, competitors and suppliers.

Despite its claim that it slashes profits to the bone in order to deliver "Always Low Prices," Wal-Mart banks about $7 billion a year in profits, ranking it among the most profitable entities on the planet.

Of the 10 richest people in the world, five are Waltons--the ruling family of the Wal-Mart empire. S. Robson Walton is ranked by London's "Rich List 2001" as the wealthiest human on the planet, having sacked up more than $65 billion in personal wealth and topping Bill Gates as No. 1.

Wal-Mart and the Waltons got to the top the old-fashioned way--by roughing people up. The corporate ethos emanating from the Bentonville headquarters dictates two guiding principles for all managers: Extract the very last penny possible from human toil, and squeeze the last dime from every supplier.

With more than one million employees (three times more than General Motors), this far-flung retailer is the country's largest private employer, and it intends to remake the image of the American workplace in its image--which is not pretty.

Yes, there is the happy-faced "greeter" who welcomes shoppers into every store, and employees (or "associates," as the company grandiosely calls them) gather just before opening each morning for a pep rally, where they are all required to join in the Wal-Mart cheer: "Gimme a

'W!'" shouts the cheerleader; "W!" the dutiful employees respond. "Gimme an A!'" And so on.

Behind this manufactured cheerfulness, however, is the fact that the average employee makes only $15,000 a year for full-time work. Most are denied even this poverty income, for they're held to part-time work. While the company brags that 70 percent of its workers are full-time, at Wal-Mart "full time" is 28 hours a week, meaning they gross less than $11,000 a year.

Health-care benefits? Only if you've been there two years; then the plan hits you with such huge premiums that few can afford it--only 38 percent of Wal-Marters are covered.

Thinking union? Get outta here! "Wal-Mart is opposed to unionization," reads a company guidebook for supervisors. "You, as a manager, are expected to support the company's position. ... This may mean walking a tightrope between legitimate campaigning and improper conduct."

Wal-Mart is in fact rabidly anti-union, deploying teams of union-busters from Bentonville to any spot where there's a whisper of organizing activity. "While unions might be appropriate for other companies, they have no place at Wal-Mart," a spokeswoman told a Texas Observer reporter who was covering an NLRB hearing on the company's manhandling of 11 meat-cutters who worked at a Wal-Mart Supercenter in Jacksonville, Texas.

These derring-do employees were sick of working harder and longer for the same low pay. "We signed [union] cards, and all hell broke loose," says Sidney Smith, one of the Jacksonville meat-cutters who established the first-ever Wal-Mart union in the United States, voting in February 2000 to join the United Food and Commercial Workers. Eleven days later, Wal-Mart announced that it was closing the meat-cutting departments in all of its stores and would henceforth buy prepackaged meat elsewhere.

But the repressive company didn't stop there. As the Observer reports: "Smith was fired for theft--after a manager agreed to let him buy a box of overripe bananas for 50 cents, Smith ate one banana before paying for the box, and was judged to have stolen that banana."

Wal-Mart is an unrepentant and recidivist violator of employee rights, drawing repeated convictions, fines, and the ire of judges from coast to coast. For example, the Equal Employment Opportunity Commission has had to file more suits against the Bentonville billionaires club for cases of disability discrimination than any other corporation. A top EEOC lawyer told Business Week, "I have never seen this kind of blatant disregard for the law."

Likewise, a national class-action suit reveals an astonishing pattern of sexual discrimination at Wal-Mart (where 72 percent of the salespeople are women), charging that there is "a harsh, anti-woman culture in which complaints go unanswered and the women who make them are targeted for retaliation."

Workers' compensation laws, child-labor laws (1,400 violations in Maine alone), surveillance of employees--you name it, this corporation is a repeat offender. No wonder, then, that turnover in the stores is above 50 percent a year, with many stores having to replace 100 percent of their employees each year, and some reaching as high as a 300 percent turnover!

Then there's China. For years, Wal-Mart saturated the airwaves with a "We Buy American" advertising campaign, but it was nothing more than a red-white-and-blue sham. All along, the vast majority of the products it sold were from cheap-labor hell-holes, especially China. In 1998, after several exposes of this sham, the company finally dropped its "patriotism" posture and by 2001 had even moved its worldwide purchasing headquarters to China. Today, it is the largest importer of Chinese-made products in the world, buying $10 billion worth of merchandise from several thousand Chinese factories.

As Charlie Kernaghan of the National Labor Committee reports, "In country after country, factories that produce for Wal-Mart are the worst," adding that the bottom-feeding labor policy of this one corporation "is actually lowering standards in China, slashing wages and benefits, imposing long mandatory-overtime shifts, while tolerating the arbitrary firing of workers who even dare to discuss factory conditions."

Wal-Mart does not want the U.S. buying public to know that its famous low prices are the product of human misery, so while it loudly proclaims that its global suppliers must comply with a corporate "code of conduct" to treat workers decently, it strictly prohibits the disclosure of any factory names and addresses, hoping to keep independent sources from witnessing the "code" in operation.

Kernaghan's NLC, acclaimed for its fact-packed reports on global working conditions, found several Chinese factories that make the toys Americans buy for their children at Wal-Mart. Seventy-one percent of the toys sold in the United States come from China, and Wal-Mart now sells one out of five of the toys we buy.

NLC interviewed workers in China's Guangdong Province who toil in factories making popular action figures, dolls and other toys sold at Wal-Mart. In "Toys of Misery," a shocking 58-page report that the establishment media ignored, NLC describes: 13- to 16-hour days molding, assembling, and spray-painting toys--8 a.m. to 9 p.m. or even midnight, seven days a week, with 20-hour shifts in peak season.

Even though China's minimum wage is 31 cents an hour--which doesn't begin to cover a person's basic subsistence-level needs--these production workers are paid 13 cents an hour.

Workers typically live in squatter shacks, 7 feet by 7 feet, or jammed in company dorms, with more than a dozen sharing a cubicle costing $1.95 a week for rent. They pay about $5.50 a week for lousy food. They also must pay for their own medical treatment and are fired if they are

too ill to work.

The work is literally sickening, since there's no health and safety enforcement. Workers have constant headaches and nausea from paint-dust hanging in the air; the indoor temperature tops 100 degrees; protective clothing is a joke; repetitive stress disorders are rampant; and there's no training on the health hazards of handling the plastics, glue, paint thinners, and other solvents in which these workers are immersed every day.

As for Wal-Mart's highly vaunted "code of conduct," NLC could not find a single worker who had ever seen or heard of it.

These factories employ mostly young women and teenage girls. Wal-Mart, renowned for knowing every detail of its global business operations and for calculating every penny of a product's cost, knows what goes on inside these places. Yet, when confronted with these facts, corporate honchos claim ignorance and wash their hands of the exploitation: "There will always be people who break the law," says CEO Lee Scott. "It is an issue of human greed among a few people."

Those "few people" include him, other top managers, and the Walton billionaires. Each of them not only knows about their company's exploitation, but willingly prospers from a corporate culture that demands it. "Get costs down" is Wal-Mart's mantra and modus operandi, and that translates into a crusade to stamp down the folks who produce its goods and services, shamelessly building its low-price strategy and profits on their backs.

Worse, Wal-Mart is on a messianic mission to extend its exploitative ethos to the entire business world. More than 65,000 companies supply the retailer with the stuff on its shelves, and it constantly hammers each supplier about cutting their production costs deeper and deeper in order to get cheaper wholesale prices. Some companies have to open their books so Bentonville executives can red-pencil what CEO Scott terms "unnecessary costs."

Of course, among the unnecessaries to him are the use of union labor and producing goods in America, and Scott is unabashed about pointing in the direction of China or other places for abysmally low production costs. He doesn't even have to say "Move to China"--his purchasing executives demand such an impossible lowball price from suppliers that they can only meet it if they follow Wal-Mart's labor example. With its dominance over its own 1.2 million workers and 65,000 suppliers, plus its alliances with ruthless labor abusers abroad, this one company is the world's most powerful private force for lowering labor standards and stifling the middle-class aspirations of workers everywhere.

Using its sheer size, market clout, access to capital, and massive advertising budget, the company also is squeezing out competitors and forcing its remaining rivals to adopt its price-is-everything approach.

Even the big boys like Toys R Us and Kroger are daunted by the company's brutish power, saying they're compelled to slash wages and search the globe for sweatshop suppliers in order to compete in the downward race to match Wal-Mart's prices.

How high a price are we willing to pay for Wal-Mart's "low-price" model? This outfit operates with an avarice, arrogance and ambition that would make Enron blush. It hits a town or city neighborhood like a retailing neutron bomb, sucking out the economic vitality and all of the local character. And Wal-Mart's stores now have more kill-power than ever, with its Supercenters averaging 200,000 square feet--the size of more than four football fields under one roof. These things land splat on top of any community's sense of itself and devour local business.

By slashing its retail prices way below cost when it enters a community, Wal-Mart can crush our groceries, pharmacies, hardware stores, and other retailers, then raise its prices once it has monopoly control over the market.

But, say apologists for these Big-Box megastores, at least they're creating jobs. Wrong. By crushing local businesses, this giant eliminates three decent jobs for every two Wal-Mart jobs that it creates--and a store full of part-time, poorly paid employees hardly builds the family wealth necessary to sustain a community's middle-class living standard.

Indeed, Wal-Mart operates as a massive wealth extractor. Instead of profits staying in town to be reinvested locally, the money is hauled off to Bentonville, either to be used as capital for conquering yet another town or simply to be stashed in the family vaults (the Waltons, by the way, just bought the biggest bank in Arkansas).

Why should we accept this? Is it our country, our communities, our economic destinies--or theirs? Wal-Mart's radical remaking of our labor standards and our local economies is occurring mostly without our knowledge or consent. Poof--there goes another local business. Poof--there goes our middle-class wages. Poof--there goes another factory to China. No one voted for this ... but there it is. While corporate ideologues might huffily assert that customers vote with their dollars, it's an election without a campaign, conveniently ignoring that the public's "vote" might change if we knew the real cost of Wal-Mart's "cheap" goods--and if we actually had a chance to vote.

Much to the corporation's consternation, more and more communities are learning about this voracious powerhouse, and there's a rising civic rebellion against it. Tremendous victories have already been won as citizens from Maine to Arizona, from the Puget Sound to the Gulf of Mexico, have organized locally and even statewide to thwart the expansionist march of the Wal-Mart juggernaut.

Wal-Mart is huge, but it can be brought to heel by an aroused and organized citizenry willing to confront it in their communities, the

workplace, the marketplace, the classrooms, the pulpits, the legislatures, and the voting booths. Just as the Founders rose up against the mighty British trading companies, so we can reassert our people's sovereignty and our democratic principles over the autocratic ambitions of mighty Wal-Mart.

Remember K-Mart and their ownership of some porn producing or selling
shop? Currently out of bankruptcy, I think, but a lot weaker!

Remember Winn-Dixie who just got out of bankruptcy? They came out of
bankruptcy minus many thousands of employees, about 400 stores plus
warehouses and other assets! Oh, I still don't know if they have a
policy of calling the law upon seeing a parent correct a child according
to the Bible!

Wal-Mart probably thinks they are "too big" to be brought down a notch
or two, but notice what the Bible says. Isiah 40:15, "Behold, the
nations are as a drop of a bucket, and are counted as the small dust of
the balance: behold, he taketh up the isles as a very little thing." KJV

Note: The NATIONS are basically nothing to God - much less one business within one of those nations. I suspect "nations" can be taken individually or collectively! :-)

There was a time when Wal-Mart stock was splitting pretty frequently but I can't see it growing very much lately.

I believe my original post was very vague. What I was meaning to ask
was if there are less expensive options than the usual hand-held radios
made for TXing in the 137-174. I.E. Motorola. I see numerous Ham
rigs on the market capable of programming from the keyboard, or a
cable. Where there's a will, there's a way to mod some of these. I.E.
Alinco, Yaesu, etc. I have reviewed several hand helds on eBay from
makers such as Linton, Weierwe, and I am not convinced that they would
but quality.

Source record: 98886

Has anyone tried the RP2100 with the new, remote SSB module? It this arrangement stable enough for decent SSB operation and is the tuning ratio low enough without backlash? Any comments on this would be appreciated. The reviews on the RP2100 by itself seem to be pretty good considering the price.

Thanks,

Frank

The guy on the phone told (at their Ellis Ave store) me they have a Toshiba 27 inch flat screen tv set (CRT tv set) in stock.I went over there,but they didn't have the tv set in stock.I went over to their other store in Clinton,Mississippi. (five miles West of doggys couch) I paid for the tv set I wanted and a short wise acre (nobody in the World can out wise acre me,I am too old a cat to be screwed by a kitten) guy (Phillip Napaul) went to the back of the store and he rolled out the tv set on a two wheel dolly.I saw a big hole in the bottom edge on one side of the box that had a lot of scotch tape covering the hole,it looked to me like a fork lift blade hole.

I told wise acre dude,I am not going to accept that tv set.He said it is the only one we have in stock, (HA! as if he thought I would change my mind,,, NO DO!) He said,we will look at it when we get outside.Right at that moment the tv set flipped forward and landed on that hard floor inside the store,WHAM! (the tv set itself weighs 85 pounds,I had looked them up on the internet before) He said,if it wasen't broken before,it is now.Then wise acre dude told me he would sell me the tv set that is on display.I told him I don't want anything like that.

I told him to call their store on Hardin Street.(that's down town near the Fairgrounds,six miles from doggs couch) He said they have a few of the tv sets in stock (Toshiba 27 inch flat screen CRT tv sets) and I can pick up a tv set at that store.I just didn't feel like doing any more running around this afternoon because my back is hurting me,so come Monday,I have to jump back in my old 1978 Dodge lonnng base raggity old van and go to their store on Hardin Street.If it wasen't for bad luck,I wouldn't have any luck at all.
Never Accept Damaged Goods.

Now, just where is the Seeing-Eye-Doggie when you really need him????

He is a BIG fan of what he calls the the "Wal-Mart" model. Ya just gotta love someone that thinks Wal-Mart is a great model for other businesses to emulate.

I don't think any other business can emulate Wal-Mart, unless it can
become bigger than Wal-Mart at their own game.

Communities that say no to Wal-Mart are smart. Sure, they will pay
more for stuff. But the quality of life in their town will be better.

>
Actually, the vagueness hinted at what you really wanted to do.

The radios are expensive because they meet certain specs. And that
includes the type approval or whatever the current equivalent is, that
is required for radios that are used in the public service bands.

Nobody requires 137 to 174MHz transmit. I can't remember what's down at
137MHz, but whoever uses it is not going to be using the band up at 148 to
174MHz. And neither users are going to be transmitting in the 2meter ham
band at 144 to 148MHz.

There is no way that you can use a ham transceiver for the public service
bands. They aren't type approved for the 148 to 174MHz band. It doesn't
matter even if the specs match, without that type approval it's illegal
to use there. And what people often forget is that it's a two way thing,
if firemen can use amateur transceivers, then what's to keep them off
the 2meter band? After all, the units will tune across there with no
problem.

Purpose built VFO's, as you call them, generally allow for presetting an offset or offsets such that a "dialed-in" frequency reads out directly in the use frequency rather than the actual mixing or insertion frequency. Additionally, as with S-Line equipment, etc. that use band-dependent, multiple mixing formulas, multiple offsets may be set into VFOs such as the S&S unit I mentioned. Cost wise, they probably cost the same initially but I'd hate to have to pay to repair an HP. I personally have not experienced the front-end problems as you describe, but then I generally use my R-390A's. The 51S1AF/551G sort of sit on the shelf, looking pretty. I did an article on general-coverage for the Drake "C" line via a purpose-built VFO in an ER article last year. You might, perhaps, be interested in having a look at it.

Elevator music......which I like BTW......on 6.919.93mhz AM mode @
23:30 UTC.

Pretty good quality signal but drifting just abit.

Much better than Music on SSB.

S/off @ 23:40 utc.

I missed the ID. it was The Voice of the ??

There was a freq adjustment to 6.920.02 just after posting the 6.919.93
freq. It was moved while transmitting as I was in USB at the time.

> Regards Jeep/K3HVG

I think ER is a noble effort but it's a little expensive for someone
who is not actively hamming.

The S&S I'm not familiar with but I remember AOR made the dual section
vfo that replaced both the xtal section and the pto on S-Line. Looked
vaguely like a tiny S-Line. I guarantee it would be no cheaper to fix
than a synthesized HP if you were not too concerned with the precision
of the attenuator of the HP. In fact if you can get a 8656A that was
not field upgraded to the PIN diode attenuator, and the mech attenuator
went bad, (they do) I doubt it would bring more than a hundred bucks.
Use it straight through at +13 or +17 or get the little rotary stepped
job IFR uses in the 500/1200. I knew a guy who worked there who
summarily changed every one he worked on for over a year : he gave me
half a dozen and said they were all good under 400 MHz. IFR charged a
couple hundred apiece but they were like $60 from the source, maybe
Berkleley Varitronics.

IIRC the 8656/57 have 100 preset frequencies you can program in, so
you just use it channelized, since you only need to select for the
"band".

The limits on fixing 8640s is the presence of some HP custom IC's. I
have no idea if there are proprietary ICs in the 8656/57. In general
fixing HP equipment is easy. IFR is a mechanical nightmare but
electrically simple. Systron Donner-throw it off a cliff!

Someone suggested that the newer generation of arbs had the frequency
range and level to do the job and as well most are USB controllable. I
don't know if their spectral purity is good enough though.

The R-390 is the Marilyn Monroe of HF radios, though. Isn't it?

Some things Wal Mart doesn't do right.They underpay the employees,Wal Mart doesn't let them get 40 hour work weeks,some employees work overtime and don't get paid,there are some other things Wal Mart doesn't do right too.I once read about a Wal Mart employee lady who had clocked out on her lunch break,she took an eldely Wal Mart shopper lady to the lady's home and the Wal Mart employee lady was back at the Wal Mart store in plenty of time to clock back in and get back to work,the Wal Mart store mananger fired the Wal Mart store employee lady.There is a class action lawsuit going on agains't Wal Mart right now,or soon will be.The Wal Mart employees should be treated fairly by Wal Mart.There is a great big gigantic Wal Mart center in Missouri where Wal Mart keeps tabs on eveyhing related to Wal Mart.I say there are plenty of cases where Wal Mart should/needs to be sued and Wal Mart should pay.

You won't. Just as with learning CW, you have a plethora of excuses that
you attempt pass off as "reasons".

JR,

Your choices are then some type of "In-Door" Antenna
or may be some type of "Attic" Antenna . . .

Both are a Do-It-and-See-Your-Results type of personal experience
Antenna Experimentation by the Shortwave Listener (SWL)
- - - Why ? ? ?
* Because of the unique internal Man-Made-Noise that is 'within'
and 'about' your House/Condo/Apartment.
* Because of the unique RF Shielding that your House/Condo/Apartment
represents to the Radio Signals that you want to hear.

Some type of small On-the-Window Loop Antenna can be
a simple but effective Shortwave Listening (SWL) Antenna
when nothing else is allowed or doable.

An Around-the-Room {Ceiling} Loop Antenna offers
larger Signal-Capture-Area and the Horizontal position
of the Loop Antenna Element helps to reduce the man
made noise pick-up. One of these made of basic TV
type Parts can be simple, cost effective and a reasonable
performer given the limitations imposted by your location.

1 - 300 Ohm TV Twin Lead {Double Loop} Antenna Element

2 - 300 Ohm to 75 Ohm TV Matching Transformer

3 - 75 Ohm TV Cable feed-in-line to the Radio

4a - "F" Connector to PL-259 Plug Adapter for connection
to the Radio's LO-Z SO-239 Antenna Input Jack
4b - 75 Ohm to 300 Ohm TV Matching Transformer for
connection to the Radio's HI-Z Antenna Input Terminals
4c - "F" Connector to 1/8" Mono-Plug Adapter for connection
to the 'portable' Radio's 1/8" Antenna Input Mono-Jack

hope this helps - iane ~ RHF

actually "supercaps". They are in the range of 1 to 10 farads."
Apparently the "supercaps" hold their charge over a long period of
time.
Flashlights that use supercaps for storage are much better than
those that use cells but I don't know how you could tell in the store
which type you had. There was another number on the flashlight: 48
200608 which might be a manufacturer's number. The flashlight I have
has never even been dim in three months and I haven't given it many
shakes.

Not at all. I am willing to learn how to quote correctly. Once I learn how
it is done, I will do it just to please you, Markie.

The same cannot be said concerning your stubborn unwillingness to use a
spell check program OR learn CW.
You steadfastly refuse to do either. I am not lazy. You, on the other hand,
are.

you logic is fucked, and you can't have it both ways
if I am lazy you are that is the fact
/
There is no "logic" to your comparison of YOUR laziness to my willingness to
learn and adapt. I outshine you in this regard.

Your refusal to use a spell check program is but another exemplification of
your unwillingness to adapt and move forward.

Unlike you, Mark, I learned CW because it was part of the procedure to
obtain my upgrades. Using a spell check is nothing a third-grader cannot
learn in a matter of five minutes.

Round file the excuses, Mark. Your plaintive whining is falling on deaf
ears.

BTW...I rather enjoy seeing how you twist matters to suit your outlook on
life. You really don't like being told that you are wrong, do you? It
clearly upsets you, as evidenced by you resorting to profanity.

Hi Terry,

I did a google search. It sure sounds horrible.

Must be a Canadian thing :)

round file exucses?
>
> BTW...I rather enjoy seeing how you twist matters to suit your outlook on
> life.

I am simply telling it like it is

Unlike I can tell the truth, about my faults and about my Name

> You really don't like being told that you are wrong, do you?

I dislike being lied to as you do daily

>It
> clearly upsets you, as evidenced by you resorting to profanity.

Bullshit it simply a matter of not sharing your flase prtenious version
of morality I prefer honesty but I am also honest enough to adknowledge
that it isn't always possible

you are OTOH are afarid to even give your name
,,,,,,,,,,,,,,,

That is SO much hokum, Mark. First, I have no need to prove to YOU that I mastered CW. You are a virtual nobody and I owe you nothing. Zero. Zilch. Nada.
Suffice it to say I will be operating on the HF bands wherever and whenever I wish. Fortunately for the rest of us, you cannot do likewise.

Your third grade playground challenge that I should give my real name is yet another mark of bogus Machismo. Besides, you seem to be convinced that I am Lloyd, so I'll leave you to your reverie.
I would think that you of all people would have by now learned the value of remaining anonymous. Were it not for you so boldly posting your name and callsign as you dump on literally EVERY post, it is likely that you would not have received the alleged box full of kiddie porn that you seem to think was sent you by a certain party in West Virginia. Again, we have only YOUR claim that this happened and, for all we know, this is yet another of your wild fabrications and perhaps even a tawdry attempt on your part to disparage someone with whom you do not get along.

No, Markie, my real name and callsign shall not be forthcoming. Not by your childish challenge, anyway. No, I am not "afraid" to do so, I am simply more experienced and have more common sense than you. I'd rather see you as the recipient of spam and magazine subscriptions and whatever else you allege is being mailed you. You asked for it. Better you than me.

I find those sizes very hard to believe. Even a one farad capacitor is
pretty large and in some cases, larger than an average flashlight.

Depends upon the working voltage. I had seen 1 farad caps 20 years ago that
were not much larger than a couple of small mercury cells. I'm sure they've
gotten them even smaller by now.

Ok, let me
think.....Actually, I
can't claim all of this knowledge as my own, especially the troublesome 6th
and 9th harmonics of the LO. I have to give Mr. Lu Chen of Mini-Circuits for
that bit of knowledge.
Mr. Paul Vinsand of Mini-Circuits was nice enough to give me that -65dBc
figure when I was running some tests on a mixer that had a +40dBm IP3. Nice
folks.

Pete

True. I forgot about the voltage aspect, as I was thinking about the sizes used by the auto sound nuts in their vehicles. A one Farad size in those applications is about the size of a one litre (about a US Quart) container. I can't imagine a hand shaken flashlight would make enough of a voltage to allow a size reduction of any great magnitude..

I'm probably wrong, so please post any more information you may have access to.

As for those car stereo lunatics, I think they will all be deaf after a few years. I can hear their bloody bass five cars away. How can the use of headphones by a car driver be illegal when that megawatt idiocy is allowed to continue?

mike

BAD,

"The existence of a One-Farad Capacitor {Super-Cap}
is due to modern materials development and is now
useful for general experiments."
Size : This Capacitor is only 2.9cm in diameter and 2.5cm high.

One thing, they aren't worried much about how large the caps are they use in
cars, so those are not the smallest possible form factor by a long shot. I
have one of those shaker flashlights out in the glove box.. I'll pop it open
and have a look tomorrow and get back to you.

Brian [KG8CO],

G.E. World Monitor P-990A Radio : Photo-Images
http://www.universal-radio.com/used/sold185.html
http://www.geocities.com/old_radio_pictures/locate/ge.html
http://cgi.ebay.com/GE-shortwave-radio_W0QQitemZ230057319229

Rear View : Including External Power Adapter Input Jack
http://www.universal-radio.com/used/u597rear.jpg

Product Label - Note Six (6) "D" Batteries = 9 VDC
http://www.universal-radio.com/used/u597lbl2.jpg

Un-Plug the Radio from the AC Power -and- Remove the
Batteries from the Radio. Take an Ohm-Meter and Check
the Continuity of the External Power Adapter Input Jack's
Outer {Rim} Connector to the Plus and then the Negative
connector of the DC Battery compartment. Most of the
time the Outer {Rim} Connector of the External Power
Adapter Input Jack is the Radio's DC Circuit Ground and
is also a direct connection to one side of the DC Battery
Input. With this Continuity-Test you will know whether
the Radio is Negitive Ground or Positive Ground. {The
Radios Circuit Polarity and the Tip-and-Barrel Polarity.}

Next - Take your Radio to RadioShack and buy a 9 VDC
rated at 800-1000 ma AC-to-DC Adapter. Then try out the
various size RadioShack Adapter-Plugs to find the one that
fits your Radio. Now at the RadioShack Store connect the
Adapter-Plug to the AC-to-DC Adapter with the Tip and Barrel
to match-up with the Polarity of your Radio. Plug the AC-to-DC
Adapter in to an AC Outlet and Plug the Adaper-Plug into the
Radio as you finial test to see that you Got-It-Right.

IMHO - The GE World Monitor Radios were the best Solid-State
Radios that GE made prior to the introduction of the GE Superadios
{Super Radios}.

yes it is that simple - iane ~ RHF
.

>
>
>
> mike

Well, since you've asked...

Many communities have passed ordinances, mostly for noise control, making the use of such car stereo's illegal. The criteria are centered on the distance from the vehicle that the sound is still audible. In Aurora, if a car stereo is audible 50 feet from the vehicle (which would be a little less than 5 cars away), the driver can be cited, and the vehicle impounded.

Similar ordinances have been passed in a number of communities in and around Chicago.

But that's only the tip of the Fletcher-Munson curve.

There has been legislative debate downstate, as well as in communities around the state, about the long term safety concerns, not unlike concerns surrounding headphones, of such high pressure sound levels in cars while driving. Competition grade stereos have resulted in permanent hearing loss from the extreme overpressure produced by huge subwoofers firing into the cab. With the windows closed, the overpressure produced by tight bass notes or kick drums can (and frequently have) rupture ear drums. Where such debate stalls, is that the safety aspects of driving with music playing are centered on the ability to hear emergency vehicles, horns, tire screeches, and oncoming traffic...all sounds with huge midrange components. Such sounds are still audible though high bass content. One "expert" explaining to legislators actually made the argument that a factory radio at high levels is more isolating to ambient sounds than a customized vehicle's twin aftermarket subwoofers. Not unlike (mandatory radio content, here....) trying to hear the Liberty Net through the noise on Saturday nights. If the stereo is on in the other room, and the bass is thumping, you have less trouble hearing your RX-320's output, than you do if the atmospheric noise is high. Why? Because the atmospherics and the LibNet voices are competing for the same spectra, where the ear is most sensitive...the bass is not. Take out the upper end on the atmospheric

noise, and intelligibility of voices is increased. Subwoofers in cars are not competing for intelligibility with sirens, horns and the guy in the car behind you accompanying his gesticulations with spontaneously assembled language.

And there is another phenomenon at play. The truth is, that inside the car, those subwoofers simply don't seem as loud to the driver, as they do to YOU, sitting outside the car. Bear in mind that the guy in the car 5 vehicles away with his windows open has actually created a kind of two stage bandpass box for his subs...the enclosure in which they're mounted is one, but the vehicle cab space into which they fire, is actually another. And with a window open, when that over pressure spews out, it does so through a crude bass port and becomes a wave front. By the time it reaches you 5 cars away, that wave front is defined, and has subtle directional components. Inside the cab, however, it's merely overpressure that's uniformly impinging on the ears of the driver without directional components.

These directional components, though very subtle, and often consciously indistinct are at the very heart of how the mind processes audio for the auditory sense. Humans here in stereo. The mind processes in stereo. Without stereo field information, even highly defined audio becomes indistinct, and can be lost in ambience. This is how you can carry on a conversation in a crowded room. The mind allows focus on a single voice among hundreds through recognition parameters...timbre, tone, resonance as well as patterns of rhythm, and anomaly...and spatial orientation. Using the stereo soundfield, the mind processes the subtle phase differences from a single source, and locates it in space. So, in a crowded room of hundreds of voices, one can identify and follow a single voice by it's sound AND location.

Put your finger in one ear, take away that stereo spatiality reference, and see how difficult it can become.

This phenomenon, btw, is what's behind the use of stereo detectors in communication receivers. Military and commercial receivers have been doing this for some time, because it makes it much easier for code receivers to copy on crowded bands. Similar success has been realized in SSB and AM modes.

Back to the issue, though...in the car, without the spatial references, the mind finds the overpressures of bass to be less objectionable, even less audible, than you do outside the car, with a defined, and spatially locatable wavefront.

Literally, it's more irritating for you, because it's more difficult for the mind to ignore.

And armed with expert testimony in this, the industry has stalled legislation that would ban high powered stereos in cars, as was done with headphones.

If you ever have the opportunity to drive a vehicle equipped with a high watt stereo and big subs, you'll be surprised, at the end of the drive, at how comfortable you are with the level, and how loud it is for the rest of us outside the car.

I have used METAL Slinkys@ for years as indoor antennas. You simply
stretch them out across the ceiling, anchoring them with common cup
hooks,preferably close to a window. Then you can feed them with
stripped coax to PL 259 or just alligator clips. Sometimes a bit
noisy, but they work.

There's soldering and soldering. What worked for Heathkits doesn't
work for motherboards.

I opened up an audio mixer to install an option and couldn't even
see the trace I was supposed to cut.

Today things are fragile and small.

The (new) dog ate the 1/8" plug off a speaker, and stripping the wire
revealed enameled red, green and ground braids, each wound on top of
synthetic cord ; try soldering those babies to anything. Fortunately
the speaker also has an alternate input jack, so it isn't junk.

I agree. Unfortunately those who run their home entertainment, car
stereo and Ipod systems at very high levels will find themselves
cranking the volume gradually higher as hearing sensitivity declines.
Those individuals should be encouraged to simulate damaged hearing and
listening through hearing aids before the permanent damage occurs. A
few of them might just turn the volume down.

> I can hear their bloody bass five cars away. How can the use
> of headphones by a car driver be illegal when that megawatt idiocy is
> allowed to continue?

Yes, I agree. But the desire to draw attention to ones self by making
the loudest possible noise isn't limited to car stereo systems.
Consider the exhaust noise from some brands of motor cycles and several
cars.

2633. IMD observations

Newsgroup: rec.radio.shortwave
Date: 2006-11-26 20:47:20 UTC
From: r2000swler@hotmail.com
Message-ID: <1164574040.758155.119520@45g2000cws.googlegroups.com>
Source record: 98772

I have been doing some experiments this weekend and found that the smaller
MiniCircuits 9:1 and 1:1 transformers are, when used in "high" RF fields, very
prone to distortion.

I wasn't at home so I couldn't use my standard pests on 770 and 1240, but I was
within a mile of a single MW station and found that with antenna lengths longer
then 50' I found the 2nd and 3rd harmonics to be very strong. Going to a larger
home made 9:1 and 1:1 did not have these issues. I suspect that with 2 or more
signals the mix products would be very excessive.

I have been intrigued every since I added my ground ring back in 2005 and found
I had spurs where none existed before. Given that 770 and 1240 had the S-meter
on my R2000's pegged should have set me thinking. It took a while. Not only did
the MC transformers add to the problems, the input transformer in the R2000 is
before the attenuator and also produced mix products. And my trusty MC ZFXC-2-1
hybird coupler, power divider, power combiner, will under these conditions produce
a very small 2nd harmonic and at home I could just detect the 770+1240 product.
Again a home made splitter, based on Bryants design, did not have this. Smaller
is not always better.

I suspect, but haven't verified, the issue is core saturation.

Leason learned?
Antennas should be as long as needed and no longer.
The less RF noise you have, the longer the antenna you can use.

Terry

I'm trying to figure out the attraction of a shortwave radio that you
have to buy a separate battery powered outboard module in order to
decode ssb. There are receivers available for comparable prices that
have ssb included.

> cuhulin

So True! Nothing but more bulk-imported Chinese made crap
plus they wanted $19.95 for the silly penile-shaped thingie.
(ever notice that you have to 'shake it' like you're whacking off
ole Mr. Johnson to get the magnet to make enuf juice to power
up the piss-weak thingie?) I went an bought the fake one with
the pair of CR2032 Lithium Coin cells inside of it at the local
Dollar Store, although they were actually $2.50 each. I then scavegened
the four lithium coin cells (they were Sony cells!!) and used two of
them
in my two older HF radios to replace the 8+ year old coin cells
inside of them - have to watch those older 80's Icom radios
as they DIE when the lithium cell gives out. so for $5 I got new
lithium cells for the shortwaves and the LED's are now in a holder
over the radio table act as a backlite from the 12VDC with a resistor
in series.
Who needs Radio Shack expensive parts? pooohiy!

Heck, for $1.00 at the local Dollar Store I got a
two pack (2x) of chinese incandescent C-cell
flashlights *with batteries* that I keep one in
the kitchen for the sr and the other hanging on
the wall in the garage next to the electrical panel.
(that's 50 cents a flashlite - yeah their cheap
but they do work and if they go bad all you do is
toss em in the recycle bin and get 2 more for a buck.

Why buy an LED flashlite when their incandescent
cousins are cheap as dirt at Dollar General and prolly
made on the assy line in the next building in Gansu Provence?

I have the 2100 with the module. For 56 bucks without it I wasn't gonna
complain... it's a good asskicker on MW, has better sensitivity on the whip
than anything else I've had, has really nice audio for program listening and
is plain good looking.

I have the module-had to try it-it works fine but I haven't used it for
extended listening yet. It tunes like any other unit with a generic BFO
control.

I'm sure it works, as many cobbled together projects do. Since there
is a Degen DE1103 and many other radios available for about the same
price that doesn't require the use of 8 batteries plus an outboard
module to decode SSB I guess I don't see the point of the 2100 for ssb
work. It seems like a pieced together arrangement.

Terry - it could also be due to the non-linearities encountered when
the ferrite is pushed on the B-H loop any significant distance away
from zero. I'm not sure that staturation is the problem at these
frequencies, but it may be if the antenna is large enough and the core
is small enough.

Yes.

Build a loop antenna. It rake less space in one dimension like a dipole.
Use the inside of an exterior wall to tack it floor to ceiling and wall
to wall.

There are many brown marks and streaks on the radio....possibly some sort of
fecal material from the previous "fanatic" owner?

I would recommend a thorough cleansing.

Even though the knobs and controls are "dust free", it would be best to
glove-up before handling this one.

No doubt, "Radio-Mart does it again" !

I don't recall posting to this thread but my 2 cents would be that most digital semiconductors are damaged by 1500V and greater due to electrostatic protection. The number would be higher that that depending on the circuits they are in. Low impedance circuits will need a higher volts per meter to damaged them.

Generally devices that are not connected to cables will not get damaged by EMP because the voltages developed will not be great enough to damage the components so a radio not connected to power and an antenna would not get damaged if they were in a metal case like the desk top radios I own. Even plastic case radios without whip extended and not plugged into a wall wart to the mains should be OK.

Radios connected to an antenna could have thousands of volts presented to the the radio input and damaged it. Radios connected to the mains could get damaged for the same reason. The EMP pulse will generate very high voltage across a long conductor. If your radio is not not connected to a long conductor of some sort then it should be OK.

Watches will keep working for sure. Modern car ignition systems will probably keep working. First thing that would fail in a car would be the radio.

Hey no problem here with your curiousity Frank as long as you aren't offended by my top posting.

I like the looks of the radio and I think I am going to buy one someday soon. I have heard, and seems Rich will concur, that it sounds good too. I have a DE1103 and I only use the speaker to listen to at very low volume to put me to sleep. It sounds horrible otherwise. I listen to Laura Ingraham and those John & Jay guys from the west coast. They're on FM here in Boston late at night.

Ok, so back to the RP2100. What I also like about it is that I hear that it has an IF output jack. I am going to do some experimenting with precision detectors and filters and sync detectors and so forth. I think the RP2100 may be a good economical platform for that kind of work.

regards,
NEO

Sounds like a threat. E-bay wouldn't care for that. Or the publicity
a threat or an illegal act might be allowed to generate. :)

If I were you, I'd report this.

And archive a copy of it.

what's the matter, you are not responding,,,, you gone to sleep? or pasting my words and posting everywhere you can??

your about as pathetic as they get

I am a man,, I race,, I run a business and I keep a wife and children happy and enjoy my life,,, what do you do??

spend your boring hours just being a jerk, well good luck to that

oh by the way one of my first jobs on Monday is seeing my friend in the IRS and make sure your declaring your taxes

see ya

oh and any further communication from you will be classed as harassment,,, re my attorney brother

I think we all know how you feel about mr radiomart there Mike. I was
being sarcastic. If you don't remember chatting with me before then
let me remind you that I was very harsh with you in one of your other
'radiomart did this' posts. I guess I was just a little tired of your
rants against mr radiomart. I think we all get the point and I'm sure
that I would never buy anything from him because of your campaign
against him. So you can be sure that your radiomart jihad is working.
Now after reading my reply to your previous anti-radiomart post I will
have to tell you that I don't feel very good about what I wrote. I am
sorry that I called you a radiomart clone and said that you sell crap
radios for too much money. My only alibi is that I am basically just
an asshole. Heheh, but at least I'm constantly striving to make myself
a better asshole. Please accept my apology.

regards,
Bob

IP3 - third order intercept point. That does not mean much to you does
it.

It is a measurement of intermodulation products of two signals. That
probably does not mean much to you either.

Generally it is a measurement of an amplifiers ability to amplify
signals without generating other mixing products. If an amplifier
produces these other mixing products it steals the power from the
signals you are putting at its input limiting the amplification it could
produce on those input signals and so it turns out that IP3 directly
impacts the -1 dB compression point of an amplifier.

The -1 dB compression point is a point where the output of an amplifier
fails to track the input by 1 dB or in other words the gain rolls off 1
dB at some point from what the gain of the amplifier is otherwise.

An intermodulation product is the result of two signals (a mixing
product) that you might be familiar with such as the sum and difference
of two signals. If you took the direct sum or difference then you would
be talking about IP2. This measurement is basically a measure of the
difference of the sum or difference signal (whichever is larger)
compared to the original two signals. A perfect radio circuit would not
produce any other signal mixing products (other than a mixer because the
object of a mixer is to produce the sum and difference signals) so when
it come to IP2 a larger number is better since it is a measure of the
original signal levels (usually the same level for both generators)
compared to the sum and difference signal generated by the amplifier or
whatever circuit the two signals are passing through.

IP3 is the same measurement as IP2 except it is the second harmonic one
one input generator mixed with the sum or difference of the second

generator frequency. Those mixing harmonics levels produced are once again compared to the original signal levels of the two generators.

To make the measure simple you can set both generators to 0 dB and then make a measurement of the appropriate mixing products for either IP2 or IP3. Lets say the IP2 was -66 on the difference and -68 on the plus. The IP2 would then be 66 dB, which is the worst of the two. Lets say 2 times generator 1 frequency plus the generator 2 frequency product had the highest level of -75 dB of the IP3 possibilities. The the IP3 would be 75 dB.

Generally you don't care about IP2 and IP3. This specification only matters when the radio has to deal with very strong signal levels. Best example of this in the USA would be local AMBCB stations reducing the input sensitivity of a radio on short wave or other AMBCB stations.

I own five battery powered flourescent camp lanterns and three hand held LED lights,one of them has a little thin,either flourescent or LED light thingy running up one side of the light.One of my lights is made by UltraOptix www.ultraoptix.com it is intended for magnafying and putting some light on small print.Last night,I took my eyeglasses off and I pushed those two little buttons on the side of the light (doing that makes the square plastic magnafying lense pop up and the light turns on) and I held it in front of my right eye.My little doggy,she went absolutely NUTS!

You better get some Radio Shack batteries and a Radio Shack cell phone for that wire.(sayyyy,about a week ago,I saw an article about how easy it is to program cell phones so they can snoop/listen in to other cell phones) Nokia has a new super duper do everything cell phone on the market.Popular Science December 2006 magazine.The Phone That Could Replace ... Well,Everything.
It only cost $600.00 to $700.00 www.nokia.com Nokia model N5
Wayyyy too rich for my blood.I would buy a Pocket Surfer from www.datawind.com if I was using a stupid cell phone,that is.

2681. RF Systems MTA passive vertical

Newsgroup: rec.radio.shortwave
Date: 2006-11-27 13:38:59 UTC
From: Steve <sdaniel13@speakeasy.net>
Message-ID: <1164634739.901032.162170@45g2000cws.googlegroups.com>

I've said some not-so-nice things about RF Systems products over the years. However, I spent much of this past weekend trying out their MTA antenna and it turned out to be a lot more fun than I anticipated. So far as I can tell, reports that this antenna delivers an excellent S/N ratio are not exaggerated. It can't perform miracles and it's not the equal of a longwire in quiet conditions, but for someone in a noisy environment it picks up less electrical noise than any other antenna I've ever used (including the Wellbrook)--and by quite a wide margin. I was very surprised. And it's a passive antenna, a big plus all by itself.

Always nice to be pleasantly surprised.

Steve

2682. Funny RFI hunt.

Newsgroup: rec.radio.shortwave
Date: 2006-11-27 13:46:15 UTC
From: r2000swler@hotmail.com
Message-ID: <1164635175.792140.60860@l12g2000cwl.googlegroups.com>
Source record: 98721

A friend who has bought a place an hour south east of me
has had a "power line" interference that he thought might not
be real power line noise.

I thought him wrong, but got to wondering how to verify
the truth of the situation.

I decided to use my ancient but trusty oscilloscope for
some investigations. We went down this Sunday afternoon,
and I took my R8B and scope along with some other tools.
I took my DX398 with a set of "RFI probes" to sniff the
power and telephone lines. The entering lines were clean.

So I connected my R2000 to his antenna, and connected the
scope to the output. I placed the trigger to "LINE", meaning
the AC power power line supplied the sync signal. If the noise
was from the mains then the noise display would be stationary
because it would be derived from the same source.

Imagine my surprise when I found the noise was not synchronized
to the power line. It was about 1% fast.

I decided to do a walk around the area to see if there was any
oddities. My friend is blessed with a 15 acre lot and the nearest
neighbor is about 800' away. As we walked through the lightly
wooded area and approached the neighbor I was impressed
by the PV(solar cell) array. 5'X 10'. I had the DX398 and when
I turned it one I found RF noise from well below the MW, to the
top of the SW range. and on weak FM stations there was the noise
there as well.

We approached the home and were greeted by a wanker yuppy.
He had noticed us "lurking" in the woods and was unimpressed
by my comments that his alternative energy system was a source
of radio interference. He told us to "get the hell out off his
property", and that he had called the "law' to report our
"illegal" activity. Sure enough as we were walking back to my
friend's home a deputy pulled up beside us. It was kind of
funny. The deputy had not only gone to school with my friend,
but was married to my friend's cousin. Small town America. We
talked over the events and the "law" took a dim view of this
weekend yuppy. So he invited us to go back to the irate home
owner.

When we walked back the deputy had a call on his 150MHz police
hand held and there was severe noise. Mr law walked away and the

noise dropped off rapidly. Mr. Deputy was now convinced the yuppy's home was a source of nasty radio interference that, get this, "certainly appears to interfere with official police communication".

Mr. Yuppy was very upset to see the deputy along with us evil intruders.
A short conversation ensued during which the law explained that Mr. Yuppy's home had design flaws that must be "repaired". That the matter wasn't open for debate. And that if necessary he would refer the mater to the Kentucky State Police for resolution. Mr. Yuppy became very reasonable. He even invited the deputy and me to inspect the house. It didn't take long to find the charge controller/inverter was
not properly bypassed, and wasn't grounded. The ground wire was not attached to the ground lug. With some trepidation I advised Mr Yuppy to touch the ground wire to the ground lug. The noise dropped by 99%. Not gone, but clearly minimized. Mr. Yuppy's wife hollered out: "Honey that noise is gone from the TV".

I used my ham HT to give my wife a call and she informed me the noise was gone.

RF nirvana!

I suggested the homeowner contact a reputable alternative energy electrician to check the installation and if necessary, bring it up to spec.

Mr. Yuppy was so happy that he gave my friend and me four premium buffalo steaks. Yummy. We walked back just laughing to ourselves. The steaks were delicious. There was enough so my wife and I can have "leftovers" tonight with a nice salad.

Sometimes RFI projects turn out to be fun.

Wrong. IP3 is a theoretical point in space above a graph. What you
have described is the ratio of a single unwanted product to a desired
signal.

There is a small group on this forum who have made reading, rereading, analyzing, endlessly copying and complaining about the auctions of some guy that sells under the name of Radiomart a full time job. A couple of the complainers are small-time dealers who appear to be jealous of Radiomart's success at selling radios. The others just chime in to support this endless feeding frenzy.

I find it interesting that Radiomart doesn't bother to respond to the little band of complainers on rec.radio.shortwave. Maybe Radiomart reralizes that they are really little more than an odd mutual appreciation society and that not many outside their group really take the complaints seriously.

Yes, but I hadn't expected to run into power levels high enough
to cause this in the "real world".

>
> One word: attenuators.

Yep, got to love them.

The only thing was I didn't realize what was happening.
I had used variations of the
<http://www.members.aol.com/WA1ION/nrants.pdf>
for several years with no problems. It was only after making
substantial improvements
to my ground system that the RF levels got high enough to be an issue.

In the R2000 the attenuator is after the input matching transformer.

I have a nice selection of attenuators, but I didn't see the need.

I had three sources of IMD.
The MC 9:1 at the antenna coax interface.
The MC power divider.
The input transformer on the R2000.

Attenuators after the MC 9:1 would have only dealt with 2 sources.

Keep in mind the signals where pegging the R2000 S-meter. Pegged the
R8B and 7030+, drove the PCR1000 completly nuts wioth a 40Db PAD,
but I didn't think to check them before making serious changes to the
antenna system.

I broke the leads on one of the small MC 9:1 so I cracked it open to
see
how large the ferrite core was. Tiny, very tiny. ~1/16 of an inch.
Unless
space is so tight that you simply can't afford the slight size increase
home
wound cores present, I can't see any reason to use the micro sized MC
devices. For 99.99% they are fine. But for those who live too close to
a couple of MW stations, they can produce odd results. The IP2 was
not killer, but it was enough, S2, to cover any signal on
770+1240=2010

and 1240-770=470. I never noticed any IM on any HF frequencies, but
then I wasn't really looking.

And I suspect that any one source of IMD might be minor enough to
not be an issue. I just lucked out, the perfect storm effect.

My post was meant to be a cautionary tale about what to be aware of.
I really think that had I not added an additional ~50' to make up for
the ~3dB
loss the MC power divider produced, I wouldn't have ever noticed
anything.
IMD prodcucts that are buired in the noise aren't much of an issue.

Since signal and noise increases with antenna length, it stands to
reason
that at some point the noise will become an issue. And off frequency
signals
became noise for me. There were 2 simple solutions, either use a home
made
9:1 and power divider, or to use 2 seperate HF wire antennas. I use one
R2000
as a time source, I keep it tuned to WWV and record it in the left
channel, with
the target HF signal in the right. In an attempt to keep our home from
looking
like an NSA montoring post, and to avoid (false) TVI complaints I try
to leep
my antennas in a very low profile. While I am a ham, extra class, and
have
a nice transceiver, It sits on the shelf and I would have to errect an
antenna
to use that rig. But I had some TVI complaints that were only resovled
when
the complainer moved away. He saw my antennas and knew I was the
source.

Low profile means low conflict.

My car used to look like a FCC monitoring vehcial. One night while
comming back
from eastern Kentucky a car pulled up close behind us. I was mildly
freaked when
I heard a cop on the scanner run my plates with the comment "he has
too many
antennas to not be up to something." Nothing came of it, but it did
encourage me
to adopt a much lower profile.

Good story and glad the steaks went well. I like the above info on syncing
up to the line to steady noise. I have some noise here that I have not
tracked down but this should help to eliminate possibilities.

Hi Steve,, I have one of these to. I did have a 70' longwire
or random wire whichever suits your fancy. But I always had an
S2 to S3 or more noise level on it no matter what I did. Put a grounded
Balun (aka matching transformer) but to no avail, I gave up trying to
pull in anything weak,, just couldnt hear it for the noise. I bought
one of the MTA's and put it up, I put a self tapping screw on the
mast connection points to bond them together all the way to the grd.
and then drove a grd. rod in and bolted it to the mast. NO noise.
None. I started hearing things I didnt even know was there. Its
been up for 5 yrs now and still going strong. It may not have the
signal strength that other antennas have but then again its all about
the S/N ratio isnt it.

I am intrigued by this offering:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=200051377984&ssPageName=ADME:B:WNARL:US:12

He offers a buy it now price of US $1,699.00, but has a starting bid of US $1,650.00, to which so far, after four days, he has had no bids at all.

Makes one wonder..??

I have too much noise in my house and I want to hang a temporary antenna out my bedroom window. Antenna is strictly for my DE1103 radio. Radio has this 1/8" jack on it for antenna. Question is how do I deal with the connection. Should I run small gauge coax to antenna and drop a ground wire outside 30 feet down to the earth? Underground utility is directly below window 3 stories down, if that helps. Or will radio ground side be good enough to connect the sheild to?

I don't want to hang this antenna way out in the way back of property 100 feet high and then run buried coax to house and then up to bedroom and so forth. It has to be simple and quick. I think I'm going to be relocating anyway so I can't spend too much effort. My brother has offered to sell me 10 acres on a hill top in the middle of nowhere, NY. That should be nice and quiet location.

regards,
NEO

terry,
you got very lucky on 2 counts (the law being a married cousin and the fact that said yuppy was unarmed). I know people around rural Arizona that would take one look at you and shoot first before asking questions (tis sad, I know, but we have some rather paranoid types here in Arizona). on another point.... some of these "home grown installations" are definitely not up to code (people being what they are, can be too cheap to care other than it works).

www.devilfinder.com History of Jitney Jungle Food Stores Mississippi

If I am not mistaken,I believe Jitney Jungle food stores were founded here in Mississippi.A few years ago,they sold out to Winn-Dixie. Boy Howdy!,let me tell y'all something.A few years ago I was food shopping in the Winn-Dixie store (formerly Jitney Jungle,nowdays Piggly Wiggly,there have always been some Piggly Wiggly stores in Mississippi) at Westland Plaza.I pushed my shopping cart to one of the checkout counters to pay via check for my food.The democrat dude running that check out counter wanted my social security number.I told him to get the store (store manager dude was/is also a democrat,,, if y'all know what I mean?) of the store over here.I told them federal govt law does not require me to give out my social security number for things like this.The store manager still insisted on wanting my social security number.Needless to say,I did not give out my social security number and I left my shopping cart sitting right there and from that confounded Stupid Commie Winn-Dixie store I drove over to the Wal Mart store to do my food shopping.Boy Howdy!,I HATE Winn-Dixie stores with a PINK PURPLE PASSION!

At most a mild risk. We were walking down his drive, not sneaking
through the
woods and he did not have the property posted. I could slip in the
shower tonight
and be dead by this time Tuesday. I am not dismissing the risk, and
there are
lots of places I would have called the law before continueing.

You need both to be a well balance operator. If you're willing and
motivated enough to be able to learn and communicate with CW, you're also
more likely to be motivated to advance yourself technically in other areas
of radio as well. You won't be one of those unmotivated no-code appliance
operators you hear on repeaters who spend their days kerchunking all the
machines in the area.

But if that Deli advertises that their chicken is "100% organic, range-free chicken" and that turns out to be a LIE, you not only buy your sandwiches elsewhere, you tell everyone you know that the guy is a scammer. Believe me, no one is envious of a crook and a liar. And it's not "success" or "capitalism" if it is achieved through lies.

Keep up the good work, Mike. If even one newbie is warned off this crook, it's worth it.

"Viceroy Punce III of Glorious Republik Of Sylvania" <auntkrebes4@yahoo.com> wrote in message news:1164636031.064085.7870@n67g2000cwd.googlegroups.com...

2754. THE NIGHT BEFORE CHRISTMAS - RRAP

Newsgroup: rec.radio.shortwave

THE NIGHT BEFORE CHRISTMAS on RRAP

T'was the night before Christmas, and at RRAP's House,
Lloyd, Markie, Woger Stevio and many more, were all totally soused.
The Wouff-Hong shaped sex toy, hung on the wall with care
For it got much use yesterday, today an even in the hot tub ov'er
there!

The paddles and whips were all neat on their pegs,
and 12" dildos shaped like metal 6L6's were all stowed neatly away
Yea, (name here) in their studded collar and I in my cap
Had at last settled down for a long post gay leather S&M sex nap.

When out by the trashbin there arose such a clatter
I sprang from the bed to see wtf was the matter.
The moon, filtered dim by the sulphurous haze
Partly revealed the scene to my red-eyed drunken gaze,

When what to my nearsighted eyes should appear
But an o'erloaded sleigh and eight wheezing reindeer
With a grizzled old driver, who looked faintly sick
Farting and gasping, and yanking the dipole with his stick.

So desperately, swiftly, his coursers they came
As Santa roard loudly "I know what's to blame!
Those damn cookies and milk, left out made me loose!
And now, dammit the QRM, I gotta shit like a goose!"

"Now, Dasher! Now Dancer! Now, Prancer, now Vixen!
If I don't find a crapper, it'll be beyond fixing!
On Comet, On Cupid, On Donder and Blitzen!
I must piss like a racehorse and my asshole is splitting!"

To the top of the porch, to the top of the wall,
I saw the sleigh come as I heard Santa bawl.
I knew we were in for a terrible night
For our toilet was clogged with no plumber in sight!

And up onto roof, the reindeer they flew
And in Santa's bowels, was a right murderous brew!
With a lurch of sick dread, I heard up on the roof
Coax being ripped by the pawing of each tiny hoof.

I stood by the bathroom and turned at the sound
Of Santa becoming more urgent, with each bound!
He was covered in sweat from his head to his foot,

"Outta my way, Lad, Cause I gotta POOT !"

"the bathroom's not wor--" I managed to yell,
Just ere St. Nicholas unleashed all Hell !
His eyes burned like coals as he plungeded through the door
It slammed in my face as I heard Santa roar.

Then up from the bathroom arose such a stench
I knew in an instant, he'd failed in his clench!
"Oh, FUCK!" he exclaimed as he dropped loads of dookie
Then he puked in the wastebasket and up came the cookies!

The odor was rancid, the noises were worse
As I stood in the hallway and he shit, puked and cursed.
As he filled up the crapper, a sound made me jerk...
Soft wet splatters on shingles as each deer did *its* work!

But worse was in store, in this feculent game
And I knew what would happen when St. Nick pulled the chain.
Sure enough, the shit happened, from the toilet it poured
And covered the poor suff'ring bastard in sloppy XMAS gore!

He staggered toward me as I held my poor nose,
He lurched past and then up the f-n chimney he rose
Like a shit-spattered comet, or naked ass-raper,
"FUCK you," he snarled, "You were all out of paper!"

I ran to the yard and looked up and then spied,
The sleigh lifting slowly as he puked o'er the side.
But I heard him cry out as he drove out of sight
"I'm sick as a bitch! What a Hell of a night!"

So for all of the kiddies and those of their ilk,
Santa's lactose intolerant, so IXNAY the milk!
No more carrots for reindeer who come in a flit
Unless you're prepared to shovel up shit!

You want more, hire a writer, I'm sick of this rap
Yeah, Christmas is coming and RRAP can go and eat crap
As for poor Santa, he's down with gastritis and the flu
Merry Christmas you cheap bastards, and ass-phuckyou too. :)

Depends. Just *how much* fancier is the Wombat of which you seek.
...and yes, sadly I've oft heard of the fabled Wombats' incontinence.
That why -- Depends. Special design, that. (For the tail, mind you.)

...but backing up to your query:

I recall Apart down the middle, but certainly not from the zoos.

The IP3 75 dB I stated in the example was not correct. Here is the general formula: IP(n)= Pin + (delta P/n-1) where if the input power of tone 1 is used then delta power is the difference of the tone 2 output power and the inter-mod product power in dBm. If you keep both input tones at the same level things are easier to calculate so let's say the amplifier has unity gain and we set up and measure in dBm:

Input tone power (both) -4.0
Output tone power (both) -3.8
(2*F1) - F2 power was -59.7
then the IP3 would be +24

I guess my 2m in the car qualifies as an appliance radio. My HF radios are mostly all old tube type. Real radios have a warm glow. I came upon a bargain that I couldn't pass up on a Yaesu FT-901. I'm still trying to decide if it's too new for me. I still practice with code tapes but I ain't getting much better but, I'm proud of my 5 wpm extra class licence.

Message-ID: <NtmdnVms5ZjYv_HYnZ2dnUVZ_vadnZ2d@comcast.com>
Source record: 98904

This link from Mini-Circuits explains it very clearly, with spectrum analyzer plots, etc:
http://www.minicircuits.com/pages/pdfs/mxr1-18.pdf
I am not sure about this calculation that is mention here but as an example, let's consider 0dBm for each tone into the RF port of the mixer under test.
If our IMR (delta) is 60dB, our IP3 will be +30dBm,
since IP3 = [(IMR/2) + Pin]

If we had -4dBm for each tone, using the same mixer as the first example, the IMR would be 68dB.

If we had -10dBm for each tone, using the same mixer as the first example, the IMR would be 80dB.

Once again, IP3 is calculated in this manner: IP3 = [(IMR/2) + Pin]

This is the method that Mini-Circuits, Synergy Microwave, Watkins-Johnson, and other vendors in the industry use when making this calculation. The only difference is that the term "Delta" us used for the IMR spec. I hadn't heard of the "IMR" term until I did that stint at Motorola last year.
Take a look at the PDF link, and it will become very clear.
One characteristic of the IP3 terms is that as you increase the level of the two tones at the input port of the mixer, the 3rd order distortion products will increase by a 3:1 ratio over the desired tones.
As an example, if you increase your two RF tones by 1dB, your 3rd order products will increase by 3dB.
3dB increase for each tone will cause a 9dB increase in the 3rd order products.
This example is only valid if you are operating within the linear range of the mixer. The linear range is defined as the range where conversion loss (or conversion gain) is constant as you increase the signal level at the RF port.
Consider that your typical Level 7 mixer has a conversion loss of 6.5dB. There will be a point where you will increase your input tones and the conversion loss will be 7.5dB. This is your 1dB compression point.
Now, the IP2 calculations can get confusing, since there are different methods of measuring it. The [RFin + (I.F./2)] method is commonly used. With LO power applied to the mixer under test, a desired frequency is applied to the RF port.
A measurement of outpur power at the I.F. port is then recorded.
Next, a frequency of [RFin + (I.F./2)] is applied to the RF port. The power at the I.F. port will now be between 50dB to 80dB below the initial recorded value. This is your IMR (or Delta).
IP2 is calculated as (IMR + Pin). If your IMR is 70dB and your Pin is 0dBm, your IP2 is 70dB.

If your IMR is 70dB and
your Pin is -10dBm, your IP3 is 60dB, etc,etc,etc.
I hope this provides further clarification!

Still excellent for SW, but not so much so for VHF or UHF...

http://en.wikipedia.org/wiki/TV_Aerial_Plug

The Belling-Lee connector or IEC 169-2 connector, more often simply known as the TV aerial plug, is the traditional European antenna connector for TV sets and FM-radio receivers. It is the oldest coaxial RF connector still commonly used today. It connects a receiver to a terrestrial VHF/UHF roof antenna, antenna amplifier, or CATV network, via a coaxial cable.

== History ==
It was invented at Belling & Lee Ltd in Enfield, England, around 1922, at the time of the first BBC broadcasts. It was originally only intended for medium frequency broadcasts, where accurate impedance matching of an antenna connector is not a concern.

== Belling-Lee vs other connectors ==
Unlike the coaxial F connector used today for the same purpose in North America, the IEC 169-2 connector is not matched to the 75-ohm impedance of the antenna cable used. The lack of impedence matching causes signal reflections in the cable, leading to noticeable signal distortion on VHF and UHF frequencies (but not MW or Shortwave).

The IEC-169-2 connector is recognized as a source of signal distortion and has become a particular concern with digital signal reception, specificially UHF HDTV.

DAB (digital radio) and other reception modes are not as severely affected by the impedence matching issue, so only HDTV and satelite reception systems are forced to use the F connector.

In spite of being somewhat unsuitable for modern analog VHF and UHF TV frequencies, due to industrial inertia, the Belling-Lee connector is still used today as a TV signal reception connector. In Europe and the Americas this connector is not used to connect satellite TV antennas. The more electrically suitable 75-ohm F connector is standard.

== Variations ==
There is also a Miniature Belling Lee connector which was used for internal connections inside some equipment. It looks identical to a TV Aerial Plug / IEC169-2 but is obviously smaller.

Known to many in the states as the PAL connector.

I have a bunch of those computer speakers, you know the type, 2 speakers wired to each other you usually plug into the sound card on a computer, with an electrical plug for household current; I am considering using them on my various SW receivers; should they be plugged into the speaker outlet or the headphone outlet of the receiver?

That price makes no sense at all if the buyer is looking for a loop antenna to use with a radio. On the other hand if the high bidder collects antennas and other equipment and doesn't have a Kiwa loop then the sky could be the limit.

The lack of bids could be explained by the price, which would make more
sense if it was reduced by at least $1,000.

I plug them into the headphone outlet;

- or the speaker outlet, depending on the brand..

Since they havge their own power supply , they do pretty well..

Radio TimTron WorldWide (7.415) is one of my favorite Rock shows..

& still searching for the occasional BBC broadcast..

Are there any GGW videos featuring young ladies enjoying the attributes
of radios in lascivious or suggestive ways? I'll bet a ferrite rod
antenna could be a real turn-on...

Just thought I'd ask... :-)

Thanks for all of the info. I was asking because I was looking for a less expensive alternative than buying a Motorola HT-1250 or similiar radio. I guess the brain wasn't fully engaged when thinking about using a Ham rig and modifying same. I just need to suck it up and purchase the appropriate radio. Anyone have knowledge of the handhelds offered on eBay? Several manufacturers are Weierwei, Linton, Jintong.

www.cattledog.com See that Blue Heeler Australian Cattle Dog sitting there? My little doggy looks exactly like that,,, except she is a female Dog.

My old buddy showed up over here about an hour and a half ago.He helped me sit my new Toshiba 27 inch flat screen tv set up on top of my antique pump organ that I use for a tv stand,for my RCA 27 inch tv set (I use the RCA only for webtv) and now for my new Toshiba (made in Thailand) tv set,both tv sets are sitting right next to each other.I gave him two old metal milk cans and a big old metal petroleum can and a wooden glass front display case and I let him take my old made in 1941 post office sidewalk drop box (I bought it from him about eight years ago.I need to get some of that stuff off of my front porch) back with him.I have so much junk (it isn't all junk though) here,I will never notice that stuff is gone.

Two points, where I work we are "upgrading" for digital TV. SDI and
HD-SDI.
SDI copes nicely with 50 ohm BNC connectors. HD-SDI barfs with anything
less then the specified connectors(and coax!). It isn't commonly
understood
that while NTSC, and PALa nd SECAM, are (were) all 75 ohm, 99% of the
BNC
connectors were 50 Ohm. With a Fmax if less then 5MHz the 1.5:1 VSWR
was
not an issue.

If you are unsure of the type connector, 50 Ohm BNCs have a inner
plastic
sleeve that "true" 75 Ohms lack. The mating center pin is the exacy
same
diameter. In one way the upgrade has been very useful as I have rescued
some
nice, but older, coax cable, connectors and tools. The last thing we
want
is any more 50 Ohm connectors! And you have never lived until you try
to debug a video level issue where someone used a 50 Ohm Ethernet term
for a 75 Ohm. Great fun.

The second point is this prompted me to look up IEC power connectors.
Somewhere or somewhen I had read about the different styles of IEC
connector. I found the info usefull and printed it out for future
refference.
<http://www.accesscomms.com.au/reference/IEC320.htm>

It is nice, but pointless, to know that the proper name for the "2 pin
PC
power connectors my R2000s use are really C17 and C18. Of course a
C14 will fit, there just won't be a ground connection.

Wow...positively astounding price for a Drake shortwave radio. How
could a used shortwave radio possibly be worth $1.6k!!

Great write-up, John!

In my dreams, I see me joining you, Vince, and Gary some day for one of your fine DX outings in South Africa. Your description of the quiet bands, with electrical noises a couple of kilometers away, sounds wonderful. As you know, we have very few T-storms in the Northwest but it's tough to get away from AC mains noises.

If you ever win the Lotto, head on out to the Pacific Northwest USA, and join Nick, Walt, John and myself, and we'll show you what DXpeditions are like "Grayland-style".

Your wife Dawn was still in a pleasant mood after accompanying you on the DXpedition? My wife has never joined me on any of the dozens of DXpeditions I've had since 1987, and I doubt she ever will. She's very accomodating of my hobby though, and has helped string out many an antenna at home.

Again, thanks for the commentary, DX loggings, and photos. Fine job!

73,

Guy Atkins

well,
the quantities they are talking about on that website are so small as to be relatively harmless. I've seen many such "calibration sources" used in college labs. you'd have to spend close to $100,000 just to get an amount that could be considered hazardous....

so..... blathering about that website doesn't really do a lot of good (other than giving them free advertising).

The formula I quoted IP(n)= Pin + (delta P/n-1) is a classical
derivation of a 2 tone result in the passband of a broadband circuit
such as an amplifier. Delta P is the difference in the output tone level
and the intermodulation product level. You can use it for the input IP2,
IP3, et etc. The formula can be used to calculate any intermodulation
product as long as the following conditions are met:

1. The tones and intermodulation products you want to make a measurement
on all have to be in the circuits passband.

2. You have to be in the circuits linear range.

3. You have to be within the dynamic range of the measurement equipment.

The Mini-circuits pdf is about a making these measurements on a mixer
and so it requires a third generator as the Lo.

IMR is intermodulation ratio. The definition appears to be the delta of
the input tone level power and the measured spurious response, which is
the intermodulation product I speak of or in other words is a difference
dBc (dB below carrier, this being the input tone). This being the case
then IP3 = Pin + (IMR/2) has the same meaning if there is no gain. If
there is gain then you would get a different answer. I think you are
better off using the formula I referenced as both input power and gain
or loss are accounted for.

The test setup has several amplifiers so I don't know how they actually
expect to make a measurement on the DUT. Also troubling to me that they
state the IP3 measurement can only be made at some input power level and
that it you will get a different result at a different input power
level. Well, you will get the same result at different power levels as
long as you account for it and conditions #2, and #3 above so I don't
understand their problem with that.

They are also using filters. Using filters is OK as long as you don't
violate condition #1 above.

These radios are cheap. Very cheap. Audio is 'tin can' quality. The people I know say that the receiver part of these handhelds are mediocre at best. They suffer from severe intermodulation problems. A Yaesu VX-170 is a better choice. This handheld is near perfect and easy to modify.

However, when transmitting, the supplied antenna is only guaranteed to work within the 144-148 MHz range (+ or - a few MHz). If you use it 'out of band', you might damage the transmitter (high SWR). You will have to buy a second antenna that is designed for the frequency you want to use.

- How could a used shortwave radio possibly be worth $1.6k!!

HJS,

Since the RL Drake R8B was discontinued the eBay Price
has taken an up-turn. With the six (6) most recent being :
$1699
$1499
$1325
$1599
$1451
$1599
Note - Had a 'new' Price of $1349 when it was still being built.

Some people are paying more for the Drake R8B used than it sold for
when new??? Do it's signal catching abilities improve with age and
use? It has apparently attained collectible status alongside other

notables like the Panasonic RF9000, Sony CRF330 and Zenith TO with performance apparently a secondary issue.

I know Drake as a small manufacturer who was one of the last companies
to react to collapsing demand for expensive consumer grade HF
receivers. They made a few nice radios over the years, but so did a
lot of other companies.

Uh, I don't think performance is a secondary issue, rather it's the
primary issue. The 'performance' of an R8B is competitive if not
superior in some ways to anything currently being offered by anyone. I
don't know of any radio for the same (albeit inflated) price that offers
more, and there is certainly NO comparison between it and any of the
other radios you list, IMHO.

Very true on all of your points, but the initial question was about the IP3
of receivers, so the mixer specification is what is being talked about here,
not amplifiers. When characterizing amplifiers, you have either input IP3 or
output IP3 to contend with, so it gets a little bit more complicated.
>
> The formula I quoted IP(n)= Pin + (delta P/n-1) is a classical

> dBc (dB below carrier, this being the input tone).

No, we are talking about the delta between the 3rd order product and its
associated tone at the I.F. (output) port of the mixer under test.

This being the case
> then IP3 = Pin + (IMR/2) has the same meaning if there is no gain. If
> there is gain then you would get a different answer. I think you are
> better off using the formula I referenced as both input power and gain
> or loss are accounted for.

True.
>
> The test setup has several amplifiers so I don't know how they actually
> expect to make a measurement on the DUT.

Actually, this is very easy.....those amplifiers have a very high IP3, so
they introduce very low measurement error.
This setup will allow you to have an IMR of at least 110dB. I didn't have
those amplifiers on hand, so I used circulators for the required isolation

when I characterized that MCL digital step attenuator.

Also troubling to me that they
> state the IP3 measurement can only be made at some input power level and
> that it you will get a different result at a different input power
> level. Well, you will get the same result at different power levels as
> long as you account for it and conditions #2, and #3 above so I don't
> understand their problem with that.

As long as you are within the linear range of the DUT, this is true.
>
> They are also using filters. Using filters is OK as long as you don't
> violate condition #1 above.

If you are using low-pass or bandpass filters at the output of each
generator and make sure that the tones are at the required level, this is a
non-issue. Sometimes, you might only have a filter that has a corner
frequency very close to your highest frequency of interest.
Part of calibrating the test setup is making sure that you have the correct
power level at every frequency that you are making the test at. What I would
do is measure the power level of the RF generators and LO generator at every
frequency of interest, and either use a correction factor for setting the
generator output manually, or I would enter the correction factor into the
Labview program when applicable. Since we are making sure that the power
levels are correct at all frequencies, condition #1 is being met.
>
> --
> Telamon
> Ventura, California

On a final note, I haven't done any multitone testing of
amplifiers.....my tests were limited to harmonic distortion, noise
figure, S-Parameters, and 1dB compression point.
As I have mentioned in the past, it sounds like you have been in the
industry, and I appreciate your input.
One thing I didn't mention was a piece of test equipment that makes these
tests a little bit easier. Instead of using a swept spectrum analyzer, a
Vector Signal Analyzer (VSA) is used. This instrument has a very wide
dynamic range, with a noise floor of -140dBm, even in a very wide passband.
Since this is really an FFT analyzer vs a swept analyzer, you aren't limited
by very long sweep times of the swept analyzer.
Another new tool that has become available from Agilent is the PSA. This is
a spectrum analyzer with added functions, but the best thing about this
analyzer is the very low sideband noise from its internal LO.
This makes it possible to look at the phase noise sidebands from an 8657 for
instance, even at 1MHz away from the carrier.
There were several different generators from Agilent, Rohde and Schwarz, and
Fluke, but the quietest units they had around were still the 8642B. When I
characterized one of those unit at a 100kHz offset, I measured the noise
down at -154dBc.
The new R&S stuff isn't bad, but the 8642 generators are still "king of the

hill".

At those prices performance would have to be a secondary issue because comparable reception performance could be gotten from several other discontinued high-end receivers. And that is the price for a used receiver not a new one.

> I
> don't know of any radio for the same (albeit inflated) price that offers

> other radios you list, IMHO.

The radios including the Drake were listed mostly because collector interest has pushed the price beyond anything that makes sense. Those radios perform no better now than when new and indeed they are all gradually aging.

Albert Schweitzer, as part of his all-inclusive philosophy, composed
this prayer:

Hear our humble prayer, O God, for our friends the animals, especially
for animals who are suffering; for any that are hunted or lost or
deserted or frightened or hungry; for all that will be put to death.

We entreat for them all Thy mercy and pity, and for those who deal with
them we ask a heart of compassion and gentle hands and kindly words.

Make us, ourselves, to be true friends to animals and so to share the
blessings of the merciful.

I think the high prices for the R8B are a
bit excessive -- it's a great receiver, but
these days, with SW on the way out, there is
not much a R8B can do that a R8 or R8A cannot.

Dear John,

With the dearth of great affordable table-top short wave radios currently being manufactured, the price for the older, discontinued, ones in good condition can only go up. These will be purchased either as "collector" items or for actual use, as one in good condition will greatly outperform any portable ever or currently being manufactured. I have told my wife that when I "ascend" (hopefully) to the great "Radio Shack in the Sky," to be careful - I believe that, once the AOR AR7030 Plus is discontinued, its price will positively skyrocket and she should not settle for anything less than a "good price." (A "good price," of course, being what someone is willing to pay at the time one wants to sell!) My unit, of course, is in perfect condition; my wife made a cover for it and I keep it covered (and unplugged) when it is not in use and I have retained the original box, the original packing, and all paperwork associated with it. But I wish I had the money to buy another fully-tricked-out AR7030 Plus and just keep it in its box. What a price THAT would bring some year in the future!

Best,

Joe

There is only one problem with the AR7030+, and that is the weak dollar. I'm glad I bought mine years ago. However, mine has seen many a trip to the boonies. I have an ammo case with cut to fit padding to transport it. Incidentally, you need to put electrical tape over the rear IR sensor when you use it outdoors.

Being an SWL since the early 1960's the concept of paying to listen to the BBC is anathema to me. None the less the BBC have become much less frequent contributors to the North American SW bands. A local AM (MW) station here in Santa Barbara features many hours daily of the BBC satellite feed. KZSB 1290 AM. They only output about 250 watts but I have heard them as far south as Oxnard.

What you are seeing is Radio Shack going into survival mode.

In the last few months because of their internal problems, they are doing a massive revamping which will focus on new televisions and cell phones...everything else is secondary.

The sad part is that they still are the ONLY place in town to buy ANY components.

If you want the status quo to change, I suggest you find a kid and teach them to BUILD stuff instead of allowing them to watch television and play video games....Radio Shack like so many other companies just offer what the masses want.

Yesterday at about noon time,my old buddy showed up over here.He helped me sit my new Toshiba 27 inch CRT flat screen tv set up there on my old antique pump organ that I use for my tv stand.OK,I connected my DirecTV set top box to my new tv set.Problem is though,there are a lot of little thin horizontal shadowy lines jumping around on the tv set's screen.

Metinks there isn't anything wrong with my new tv set,I think perhaps the inside wire in the DirecTV set top box isn't quite long enough to be making good enough contact with whatever.Or,maybe I should phone 1 800 godirectv and get somebody over here to check it out,maybe it needs a filter thingy?

A few years ago,I started getting some heavy wavy lines on my 27 inch screen RCA CRT tv set that I use only for webtv.There was a Time Warner cable tv guy next door and I stepped over there and I told him about my webtv wavy lines problem.He went to his truck and got a cable that has a longer inside wire.As soon as he installed that cable with the longer inside wire between my webtv set top box and my RCA tv set,the wavy lines disapperead and I haven't had any problems with that every since then.I sure do appreciate any advice.

HJS - The Collector has one thought : GOT TO HAVE IT !

IMHO - What you see on eBay with the Drake R8B
are "Market Forces" setting the Price for a Limited
Quantity of an Highly Valued Item 'For Sale" at Auction.
Plus - Perceived High Quality of the Item.
Plus - Excellent Performance of the Item.
Plus - Very Few Items / Discontinued / Not Being Made Anymore.
Plus - Small Number of 'Very Interested' Buyers.
eBay Auction = World Wide "Open {Competitive} Market".

basic economics 101- yes it is that simple ~ RHF

That says it all: "The Collector has one thought : GOT TO HAVE IT !"
Collectors and users have different price ceilings.

Although the high bidder will say otherwise, performance isn't the real
reason someone would pay a premium for such a radio because more
reasonably alternatives are available that will catch the same
stations. Bragging rights that come from chasing and paying a premium
for something "rare" figures big in the equation.

You may need to select the signal source within the television
software. Usually it's a setting like cable or antenna or similar.

Neil <neil@nowhere.net> wrote:
>Any of you guys having good reception of BBC in California - times??
>freqs??

(Seattle should be close enough.)

Morning 12095 (North Africa)
Afternoon 15400 (Africa track)
Late Afternoon, 15285, maybe 15360 (East/South East Aisa)
Evening 6005, 7120, 7160 (Africa)

Morning 9740, 6195, 5975, 3915 (East/South East Aisa)

Probably the best, this time of year are 9740 and 6195 around
7-9 AM PST.

Go to the web site <http://www.bbc.co.uk/worldservice> for the
transmission schedules for each area. I think the quickest way
is to take the link, (under the schedules "enter your city" box),
labeled "Shortwave Update".

Or try 550 kHz, KOAC Corvallis Oregon which broadcasts the
BBC PRI feed from 9 PM to 3 AM PST.

2860. (OT) Military tactical comms: Harris v. ITT

Newsgroup: rec.radio.shortwave
Date: 2006-11-29 20:47:36 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1164833256.190422.246930@h54g2000cwb.googlegroups.com>
Source record: 98949
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna

I realize this is off-topic, but I thought that perhaps some knowledgeable individual (preferably with hands-on experience with such equipment) could give me an informed opinion on how ITT's tactical radio products compare performance-wise to those of Harris Corporation. Specifically, I'd be interested in any opinions of the VHF performance of Harris's current Falcon II product line (e.g. AN/PRC-117) and ITT's current SINCGARS product line, which both see high usage in the US and other militaries worldwide. Not interested in Harris's edge where multi-band is concerned; only interested in opinions on VHF performance. Speaking specifically to those who have used such equipment, any preferences for the equipment of one of these radio manufacturers over the other? And why?

Any informed opinions with regard to performance, reliability, drawbacks, ease of use, etc etc would be most appreciated. In essence, in what areas would one have an advantage over the other?

Thought I'd pose the question here, since we have some very knowledgeable individuals in these groups, some with military experience...

Apologies for the off-topic nature of the query.

Regards,

Junius

There is no receiver priced below the cost of an R8B that "gets the same stations." In severe DX situations, the R4B will beat anything in or below its price range.

No dumbfuck, it stands for Millitary Affilliate Radio Service
(M.A.R.S.) it's millitary communications done on HF and VHF.

Yes, yes statements like that make a great reading story. However, I
would be very interested in some hard evidence. A side-by-side test of
six out of production high-end receivers showing just how many stations
can and cannot be heard on which radios.

Has anyone ever done this, or are we just going to continue to repeat
that receiver x is better than y because someone said so.

Senator Kerry's wife is NOT FRENCH!!

She is African-American [really]!!

Senator Kerry has a real problem. He is a Liberal Democrat from the Peoples Socialist Republic of Massachusetts.

Interception of Communications Tribunal Denies

In May 1997 the Interception of Communications Tribunal wrote to me regarding the complaint I had brought in February. They say,

The Interception of Communications Tribunal have now considered your application carefully and have asked me to inform you that their investigation into the matters you raised has satisfied them that there has been no contravention of Sections 2 to 5 of the Interception of Communications Act 1985 in relation to a relevant warrant or relevant certificate.

Rubbish. They're bugging my house and they won't admit it. The ICT and SST are a sham.

The History Of The Middle Finger

Well, now......here's something I never knew before, and now that I know it, I feel compelled to send it on to my more intelligent friends in the hope that they, too, will feel edified. Isn't history more fun when you know something about it?

Before the Battle of Agincourt in 1415, the French, anticipating victory over the English, proposed to cut off the middle finger of all captured English soldiers. Without the middle finger it would be impossible to draw the renowned English longbow and therefore they would be incapable of fighting in the future. This famous English longbow was made of the native English Yew tree, and the act of drawing the longbow was known as "plucking the yew" (or "pluck yew").

Much to the bewilderment of the French, the English won a major upset and began mocking the French by waving their middle fingers at the defeated French, saying, See, we can still pluck yew!

Since 'pluck yew' is rather difficult to say, the difficult consonant cluster at the beginning has gradually changed to a labiodentals fricative F', and thus the words often used in conjunction with the one-finger-salute!

It is also because of the pheasant feathers on the arrows used with the longbow that the symbolic gesture is known as "giving the bird."

IT IS STILL AN APPROPRIATE SALUTE TO THE FRENCH TODAY!
And yew thought yew knew every plucking thing!

On Medium Wave, I have had my three receivers side by side, an ICOM R75,
TenTec 350 and an R8.

On things like deep South Americans and Asian / Oceanian stations, the R8 (I
don't have a B) is able to get readability on signals the other two detect
but can not produce good audio on or separate from adjacents.

This is like the Hammarlund HQ 100, 120 and 180. Each was significantly more
expensive than the lower model, and each came through a little better than
the baby brother in a pinch.

Plenty of DXers have gone on DXpeditions with a variety of receivers, and
run them side by side. In the under-1500 dollar range, the R8 series is
vastly better; the AOR may be better if the interface does not get you. At
that point, you jump to tranceivers or to the $5 kilobuck and above things.

Is anyone here interested in collaborating on a small pc board with a precision detector and an elliptic filter? and maybe even a small amplifier too. This would be a retrofit to existing radio. I have heard it is almost as good as a sync detector- better than some. I have heard others say it is smoke and mirrors so I expect to get to the truth here.

I am looking for two other people to help out. Board will cost you maybe 30 bucks. I use PCB express. You get three small boards no silk no solder mask for about 60bucks. I am in-between consulting jobs now, so that I have a little time but watching my funds. I think with smd parts maybe only half a board is needed so that each will cost even less.

Idea has been around for quite some time but recently brought to my attention by Terry. I am looking at that Redsun RP2100 unit as the platform to run with.

regards,
NEO

Maybe that is what you were talking about but I'm trying to stay more
general. The formula and explanation I provided can be applied to RF
circuits in general not just mixers. Mixers comprise just one to three
stages in a radio generally. The rest of the circuits are filters and
amplifiers and detectors. With the right generalized approach you can
analyze any linear circuit or the whole radio.

> > This being the case then IP3 = Pin + (IMR/2) has the same meaning

> when I characterized that MCL digital step attenuator.

Well, its easy if you know all the specifications of the amplifiers or
have made the measurements on the test setup by itself. This is
something I can't do and would be making an assumption about.

I don't understand why the amplifiers are need in the first place. Maybe
their generators have weak outputs. The test setup is overly complex and
has unneeded equipment. When I see something like this it generally
means that someone is having problems making the measurement and not
understanding the problems they are having. It could be they are having
reflections from the DUT screwing up the measurements and the amplifiers
and attenuators is their way of dealing with it. I could keep making
pointless speculations about this but you must see the point by now.

The need of attenuators and power divider on the generator outputs is
well understood. The generator outputs must have some degree of
isolation from each other so the test setup itself does not generate the
intermodulation products to be measured. I've made these measurements on
unity gain amplifiers with just two generators, two attenuators, a power
combiner and a spectrum analyzer. That's all you need.

> > Also troubling to me that they state the IP3 measurement can only

> As long as you are within the linear range of the DUT, this is true.

Yes, that is one of the conditions I stated and is a direct logical
requirement of this type of measurement.

> > They are also using filters. Using filters is OK as long as you

Well OK for you to say that but I'm not so sure other people that make measurements on SW radios and publish the results have paid proper attention to this.

Very conscientious of you to follow proper procedure in calibrating out the affects of support circuitry. It is the right approach but again for the sake of discussion I can't know what it is you or Mini-circuits may or may not be doing unless it is explicitly stated.

> of the hill".

I have some experience making these measurements. One thing about being in electronics is change. I'm sure you know the drill. I have experience in many areas out of necessity. Digital, analog, RF, mixed signal, electromechanical, military, computers and so on.

Agilent make some good equipment. Always always have since they were HP. The company where I work now has an Agilent PSA. The thing is still slow on the noise measurements and I can't see how that type of

measurement could be speeded up while maintaining accuracy. I checked the formula I posted against the IP2 and IP3 measurements it calculated on some wide band amplifiers and they matched so I have some confidence in them AND I ran the generators at different output levels and got the same IP2 and IP3 numbers so it can be done with consistency at different levels so there you have it Mini-circuits personnel.

The Agilent PSA is an OK piece of equipment that automates some measurements.

Anritsu bought Wiltron a US manufacture of RF signal generators with very good phase noise. The R&S claim to fame I saw as important at the the time I was buying them was phase locking ability. Most RF generators have frequency lock but the R&S generators have phase lock. Most people (very smart people by the way) didn't understand the difference and would fail BER measurements due to the multiple generators in the test setup being frequency locked that occasionally slipped a cycle on a telecommunications link. What is a few bits lost every few minutes between friends anyway? Oh well, details, details...

At the $1600 price for a used R8B, there are better choices.
http://www.universal-radio.com/catalog/commrxvr/3396.html for instance,
though the cost of extra filters might make it go above $1600.

I've built precision rectifiers using op-amps, in the past. While they do
sound very good, they don't eliminate the selective fading that is present
with any other envelope detector.
I once built a version of a crystal radio that used this type of detector. I
used a textbood circuit that had diodes in the feedback loop of an op-amp.

When a receiver is being characterized for IP3, the 1st mixer is what is
being characterized in every case.

>
> Well, its easy if you know all the specifications of the amplifiers or

This is something that is generally done in the industry today. It is more
or less the testing standard.
>
> I don't understand why the amplifiers are need in the first place. Maybe
> their generators have weak outputs.

Most RF generators today have an output of at least +15 to +20dBm, so
generator output is not an issue. The main reason for selecting these
amplifiers is twofold. First of all, they have very high reverse isolation,
and second, they have very low harmonic distortion and very good multitone
response.

The test setup is overly complex and has unneeded equipment. When I see
something like this it generally
> means that someone is having problems making the measurement and not
> understanding the problems they are having.

From the above statement, I have to deduce that you haven't really made too
many mixer characterizations. If you had, you would have discovered that a
"complex" setup is necessary when characterizing low distortion mixers.
If you are measuring the IP3 of the newer RF switches and digital step
attenuators, this "complex" setup just barely makes the grade.

It could be they are having
> reflections from the DUT screwing up the measurements and the amplifiers
> and attenuators is their way of dealing with it. I could keep making
> pointless speculations about this but you must see the point by now.

No, I don't see your point.

> combiner and a spectrum analyzer. That's all you need.

Perhaps this setup is adequate for unity gain amplifiers, but it doesn't
even come close if you have to characterize high performance mixers. You
might thing the setup is working well, but you would discover very quickly
that one of the newer mixers isn't meeting its specifications.
understand their problem with that.
above.
>>
>> If you are using low-pass or bandpass filters at the output of each
>> generator and make sure that the tones are at the required level,
>> this is a non-issue.
>
> Well OK for you to say that but I'm not so sure other people that make
> measurements on SW radios and publish the results have paid proper
> attention to this.

I am not sure about that.......if they are not following these guidelines
and if different reviewers are using different topologies with their test
setups, there is no standard to compare by.
A similar problem occurs with microscope specifications. As an example, with
planachromatic objectives one manufacturer might specify a plan objective as
having a flat field with good color correction over at least 90% of the
viewing field while another manufacturer would use 85% as a specification.

Here is another problem when making IP3 measurements, or any distortion
measurement...........when you are looking at distortion components that are
at -100dBc or lower, even connectors can contribute to the measured result.
When selecting attenuators, the ones with the transverse heatsink fins do
have lower IMD properties, so these are the ones to use.

> different levels so there you have it Mini-circuits personnel.

I have noted the same thing, as long as I was working within the linear
range of the DUT. As far as noise testing, I think you are talking about
phase noise. If that is the case, Agilent has a new phase noise/VCO test
system that can measure down to below -160dBc. We were using it with some of
the new VCOs (in-house design). Still, when measuring down at that level,
external factors can affect the measurement. When were were testing the VCOs
at -40C, there were some spikes in the phase noise spectrum.
The firing of the SCRs in the environmental chamber were causing
perturbation of the tuning voltage from radiated emissions. These were very

low frequency harmonics of 60hZ.....the 3rd and 4th harmonic were causing the problems.
>

I remember when I was working at Rockwell-Collins. They had buffered 10MHz signals running through all of the labs that we used to connect all of the generators and spectrum analyzers to. This was also important when characterizing the frequency hop synthesizers.
Same thing at Motorola.....we used to sync all of the equipment when we were measuring BER of some of the newer radios.
Those R&S generators were pretty good. When we were looking at new generators years back, we had samples of the Agilent E series and of the R&S SMY-01s. Those SMY-01s were pretty nice, but not as clean as the 8642s. We used them as the reference oscillator with new synthesizer designs. At wide frequency offsets, the phase noise of the synthesizers were about the same with both generators, but at a 7kHz offset there was a 25dB disparity between the two, with the 8642 coming out better.
Another thing about the SMY-01s.....many of them had failures in the phase lock loop section.
I haven't seen this problem with the newer R&S units.....they have been very reliable. Wouldn't be bad for a home unit!
I remember the 8640s used frequency locking, and if you connected the generator to a high resolution frequency counter you would see the output frequency warp up and down by a few Hz over a period of time.
That is the reason that I still have my old Boonton 103D. This generator has phase noise in the -143dBc range and it has a dedicated OCXO for the phase locking function.

Oh well.....time to get ready for work again.....nice talking (bantering?) with you. I don't mind intelligent debates!

I found this web page while looking for a nifty audio filter I found
last year.
At the very least it gives food for thought.

I haven't been in CA in some years but one of the best frequencies was
9740 kHz in the morning from Singapore.

Of course, BBCWS is available by internet streaming but IMHO once you
get into internet streaming you may decide to go with another BBC
stream which has more of the programs you like.

Not only are the domestic over-the-air stations available on streams
but so are the satellite radio stations. BBC7, for example, runs
repeats of ancient Radio4 dramas, comedy and panel shows including
Goon shows from the '50's. There is also audio on demand.

I'm in an apartment in Hong Kong with a Sony ICF 7600GR tied to a few metres of wire hanging outside the window as antenna.

Radio Australia is strong as if it is my local MW station. That's probably because they've relays in Singapore and Taiwan. In contrast, Radio New Zealand is noticeably weaker although it's still audible. Seems their signal come all the way from their country with no relay halfway.

I'm very surprised that you could pick them up as far as central US.

I don't know how this affects the original poster. but the BBC, once the one of two stations you could receive anytime day or night in the U.S. has reduced it's broadcasts to North America. The other was Radio Moscow. :-)

The radio feeds are as you said are available over the Internet and via satellite, but I think the real reason is money. Many NPR stations pay them for the rights to rebroadcast BBC news.

While they are unable to charge end users for their programs (BBC prime is the exception), if you listen to them on NPR, you will probably donate to that station and that will encourage them to buy the BBC programing.

Personaly, I'm not very happy with the BBC, to them if you are an Isrishman who blows up innocent people, you are a terrorist, if you are not Irish, you are an "activist".

Geoff.

I have more then enough proejcts to keep me busy until
the cows come home to even think about getting into a
collaborative project.

Right now I am concentrating on Dallas Lankfords active
antennas and his simple but extremely effective phaser".
It is near magic to turn a pot and steer your recptin pattern
from ~100KHz to at least 27MHz. I haven't found anything
in the 28~35MHz range to test yet.

This is the best single detector I have found.
There is another fitler on this web page, but it requires matched
diodes and after extensive listening tests with a test group of
two,my wife and I, is not as "smooth" or sounds gritty.
<http://www.amwindow.org/tech/htm/alowdisdet.htm>

A very usefull single "knob" tone control. I can't make up my mind
if a wider range single unit is better the two filters, one for male
and the other for female voices. I keep flipping my postion on this.
Right now I have one wider range control. But I suspect I will go
back to two. My wife insists I ought to just go with three,
a wider and two narrow fitlers.

<http://members.tripod.com/roymal/ReverbTone.htm>

And this is a very usefull audio fitler for radio with less then ideal IF filters. I have built several units based on this design for friends.

http://www.geocities.com/rbrucecarter/amaudio.htm

Don't ignore the AF power amp. A good clean amplifier here is a must. I will dig out the specs and a sourc for the bridge mode power MOSFET output IC I now use.

Be usre to check out Tom Holden's very good "Synch_AM "
Sync AM Demodulators Yahoo Group at
<http://groups.yahoo.com/group/Synch_AM/>.
There is a lot of good data in the message section and the files section contains a lot of good information.

One guy, Jara Rat, has some very simple and thoughtful ideas.
While I went with the AD607, there are other very good synch detectors that may well work better in the wild and wooly world of HF/SW.

Having lived with a R8B for a few months, I must admit the SAM in the R8B is significantly "better" then the AD607. Sadly the R8B does not have a 455KHZ IF making it difficult to use my exsiting outboard multimode detector. I am going to avoid trying to define "better" as it gets too subjective. If I can't measure it on a meter or scope, or at least demonstrate it with statatistics, I just can't in good faith try to
offer a difinition. With my original studies on SAM, IF filters, and the audio
chainI still feel like I am pushing audio snake oil. In spite of a year+ series
of tests with my now fried "Far Field" voice mirror beacon, it just feels wrong
that simple audio stage differences could make a 6dB difference in signal
levels that I could copy. Since I no longer have that beacon, and since I
never could duplicate the effects of ionspheric "disturbances" I was never
able to really evaluate the advantages of the various types SAM over one
another.

I have built a mixer to convert the R8Bs final IF back up to 455, but that
project is on the shelf for a while.

There are some helpful hints here, though I'm puzzled by the gripe this fellow has with synchronous detection. I personally wouldn't spend a lot of dough on any receiver that lacked it. I think a lot of people are sour on synchronous detection because they've bought and/or used a receiver that had a very poor implementation of it. When sync detection is done right, as it is on Drake's R8B, then it will sometimes do more to aid reception than all of these hints put together. But the good news is that we don't have to choose between synchronous detection and this fellow's helpful hints. We can have all of these tools at our disposal.

I don't use comcast, so I can't offer any first hand insights. However,
I did stumble across this:

How do I publish Web page files to my Personal Web Page?
To upload pages/files to your Personal Web Pages via the web, please
see https://publish.comcast.net/cgi-bin/pp_upload. Please note: you
must be signed in to the Comcast High-Speed Internet home page to view
the above section.

My first expousre to SAM was with an AOR7030+. My first impression was
that
"great". That lead me down a long path toward building my own SAM+
outboard
detector. Along the way I had a chance to test a Kiwa, MAOP and the
Sherwood
SE-3. Both are good and both are much better then the AOR. I tried
several
designs and settled on a variation of Pete's AD607 SAM. Again at first
I was very impressed. However after using it for several months the
glammor started to dull.
For better then 99% of my AM listening, which in truth is a very small
part of my
SWL activity as I am into utility, I ofund the 3 OpAmp simple "improved
detector"
to be the equal or the match for any of the SAMs I had on hand. I was
not able
to compare the MAP or SE-3 for any extened period and while both are
great units,
they do have differences. On balance I like the sound quality of the
MAP over the SE3,

but I liked teh SE3's ability to track rapid, deep fades, espcially with nearby AM
signals. I had my feet held to the fire for my posts about Dallas Lankfords
observations about the utility of a sharp LP audio filter that chops every thing above
~3 or 4KHz. Exact break point depends on individual choice.

Now that I have a R8B, I must admit that this is the best implentation of a SAM
I have yet experienced. However in many situations it too can benefit from the
AF LP filter.

Perhaps I expected too much from SAM detectors. They aren't magic and are far
from perfect. The
<home.worldnet.att.net/~wa1sov/technical/sync_det.html >
page is no longer up, but Peter C. McNulty, WA1SOV, offered an additional
OpAmp fitler design that was reported to allow the AD607 to fully reject
unwanted signals via I and Q difference and summing. I don;t have my printed
copy in front of me so I can't relate the math. The design appeard to be valid,
and several other EEs agreed with his reasoning. However I was never able to
get that part of the design to work. I wrote if off in part to the 50Hz minimum
tuning step the R2000 offers. His design is clearly worthy of study and I suspect
that for someone with more time it could be a winner.

At this point I am most interested in reducing the local RF noise, improving my
antennas and getting to understand how to get the most from my phaser. Oh,
and I am still after the Holly Grail" of a perfect 12V audio amp.

I've never had any particular trouble receiving the Aussies from
anywhere I've lived in the U.S., east or west, almost any time of day,
since 1973. That big watery mirror between them and us gives us a leg
up, I suppose.

In fact, this past week, their domestic-program 50 kW stations on 60m
were banging in here better than I can ever remember.

Many do not like the quirky interface of the AOR. On Medium Wave
DXpeditions, the Drake has tended to be the better DX receiver. It comes
close, and may be a tie, but the R8B seems to be the vastly preferred
receiver for serious DX work.

www.devilfinder.com British planted bombs in Northern Ireland

It is true the Brits did plant some (but not all) bombs in Northern Ireland and England and blamed them on the IRA.

He never did, the problem I have with NIM Busters is that the Admin
does not want to take the responsibility and maintain control over his
board. I don't post on that board, nor do I want to associate myself
with those indivivualsor that stupid ass board. I am in the process of
shutting them down for posting my picture on that board, a picture that
was copyrighted. For allowing indivivuals to make death threats against
my life. What really sick is that these indivivuals and the ISP that
the site is on, believe that that type of behavior is protected by the
First Amendment, when in fact is is not. You can not copy peoples
pictures without the persons permission, Nor can you legally make
threats on people lives over interstate telephone lines.

Thanks Steve.....I did get that far. I just have to figure out how
to upload files. All I could find was a function for uploading photos.
Maybe, what I will do is create the website on my own computer and upload
the whole directory structure to the Comcast website. I just don't know yet.

Pete

Well, actually the house where little Ralphie Parker grew up in the
movie dreaming of saving his family from bears, outlaws or injuns or
whatever with his genyewine Red Rider BB Gun

http://www.achristmasstoryhouse.com/
http://www.abc4.com/news/weird_news/story.aspx?content_id=53F2BCEF-3A5D-4E1B-ABA4-6AEBA3E0F341

I heard this on the opening blurb of As It Happens and I found links
in Google news and the Jean Shepherd fan website,
http://www.flicklives.com.

Of course, decades old Jean Shepherd shows can be heard on WBCQ, 741t6
MHz Mondays at 1700 ELT (streams) ,,,Nand on WBAI in NYC (streams and
on demand at Flicklives.com) Tuesdays at 0515 ELT.

I've used the R8B. It's an adequate radio.The AR7030+ certainly is
easier to transport since it is much smaller. I've used it in the
boonies on 12V batteries, though technically you don't get the full
performance. IIRC, the the soap on the rope puts out more like 14V. I
have a special power cord for the Wellbrook. [Damn positive ground
system.]

Mine has the NB built in as well. Comes in quite handy.

> Eh, the author confuses DSB and AM. I wouldn't put much faith in
> his/her analysis.
>
Huh? IN what way?

I glanced at it and maybe missed something, but DSB is AM. And
he certainly says it at the outset, and when he's talking about the
components he's talking about 2 sidebands and a carrier.

Now, "DSB" often has fallen into the meaning of "DSB with no carrier",
but technically one should specifically define that there is no carrier.

Some of the problem with AM reception discussion is that it was defined in
a certain set of terms, for decades and then even for beginners up
till recent times (and maybe even today). So they'd define AM as
a signal that is amplitude modulated, and that sets things up for
the vision that the carrier amplitude goes up and down. Then when
SSB became commonplace, instead of going back from the beginning
and redefining it all, a separate set of definitions gets tacked on.

This leaves people thinking they AM and SSB are two different things,
when they are basically the same.

Then when discussion of "low distortion AM detectors" comes along, it
isn't even clear what people are talking about. Because one is not
using a certain type of detector for AM (ie 2 sidebands with a carrier),
and a different type for SSB. The talk of "Amplitude Modulation" invokes
a vision of a detector that is following the voltage variations of the
signal. But that's not the case at all.

The carrier mixes with the sideband in the "envelope detector" and that
beating is what brings the modulation back down to "baseband". It's just
not a good mixer.

Listen to an SSB signal without a carrier or BFO. That's the sound of the
envelope varying according to the modulating signal, and there's no way

to make sense of it without a carrier. No differing loads on the dioded detector, no precision half wave detector (with the diode in a feedback loop), no forward biasing of the diode, can ever make up for the lack of carrier.

The carrier of an AM signal is needed to beat with the sidebands and get it back to audio. If the carrier fades in comparison with the sidebands, you start hearing things like that SSB with an "envelope detector", because the carrier is no longer strong enough to mix the sidebands down to audio, and the "envelope detector" is actually following the envelope of the signal.

The basic concept of demodulation is no different whether the signal is AM (with carrier), DSB (with no carrier) or SSB (with no carrier). They all need the carrier, or a locally synthesized equivalent, to beat the sideband(s) down to audio.

If things were spoken of that way from the beginning, then there'd be less of a leap to the "synchronous detector". No only would a universal set of concepts be applied to all modes, but the point of a synchronous modulator would become clear.

A single diode is a lousy mixer. On the other hand, since the carrier of an AM signal comes in with the sidebands, there's no reason for having a second and isolated input for that carrier.

But, long ago, people would mess with "exalted carrier reception", which would be the first step up from those "envelope detectors". They'd turn on the Q-multiplier, which had a narrow peak but a wide skirt, and that would boost the incoming carrier in reference to the sidebands, so there was a stronger carrier feeding into the "mixer".

It seems that only when SSB came along, and there were design reasons to go to better mixers for the demodulation, that two input mixers started being used, commonly called "product detectors". There were design reasons for going to those, but the basic concept of a locally generated carrier did not require anything more than the single diode "envelope detector". Indeed, the concept had been there back in the days of regen receivers, and every superhet that could be used for CW had a BFO that would feed into the "envelope detector", to give to provide a beat with the incoming signal. I should point out that when the synchronous detector was described in CQ magazine in the late fifties, the actual mixers were single diodes.

But once you had product detectors, that opened things up. The notion of boosting the incoming carrier for better mixing action became more clear. I've said before, there was an article in QST about an advanced receiver in the fifties, and it had two parallel IF chains. One wide for voice, the other narrow for CW. But, it also allowed the output of the narrow chain to feed the product detector, and there was the "quasi-synchronous detector" before anyone came up with the name.

For AM (with carrier), you had two choices. You could strip off the extra sideband and carrier, then the incoming signal was the

same as an SSB signal, and then demodulate it as an SSB signal. This saw a lot of useage in the sixties, when SSB only ham rigs hit the market, and yet AM was still common. People needed a means of demodulating the AM signals, and that worked. While I think it got discussed in the fifties as a better means of AM demodulation, nobody in the sixties was talking that way. It was just a means of demodulating AM signals when there was no means of doing so. (Not only did the SSB-only receivers have narrow IF filters, but often there was no way of turning off the BFO, and the product detectors were a type of mixer that required having that second signal at the second input; without it, you'd get little or no output even with an AM signal that brought it's own carrier.)

But if you didn't want to do that, you had to deal with getting the "locally generated carrier" in the right place. Not just so it wouldn't beat against the incoming carrier (when it was strong enough) but if it wasn't placed in the right place, the sidebands would not be translated back to audio in the same places. (So if you sent a 1KHz tone, and the "locally generated carrier" was not right in the middle between those sidebands, one sideband would translate down so that 1KHz tone was 1010Hz while the other would translated down to 990Hz, which would obviously clash with each other.)

That's what the "synchronous" bit is about. It's about putting the same sort of BFO that you'd use with SSB (which would feed the same sort of product detector used for SSB), with the addition of circuitry to synchronize the BFO with the carrier of the incoming AM Signal.

If the discussion had started with the AM detector as a mixer, then there'd be little magic about "synchronous detectors". The whole process is simply about getting the "carrier" strong in reference to the sidebands, so good mixing happens in the detector. The "synchronous" bit is only a secondary thing, a need because you want the locally generated carrier in the right place.

There have always been various means of getting better mixing action at the demodulator. But the important thing has always been about doing that.

Michael

Yea, those guys over there got a lot on the ball with High Perfromance detectors and such. Frank, GFZ, is a friend of mine and does a lot with the Racal units.

I'm not looking for anybody to do any hands on work that will take up a lot of time. Just a few who I can bounce Ideas off of and help if I get stuck. Like I said - I'm in between jobs so I got the time to lay out a board. When boards done whoever wants one can have.

Looks like the board will have the detector, amplifier and filter on it. I want to drive a set of phones with the thing and am not really too concerned with driving a speaker. I will have a line out connector to drive directly into my Marantz so I don't think amplifier will be so critical for me. I notice that Dallas Lankford set up his filters to drive into 8 ohms. I think I'm going to drive into a higher impedance - probably near 100 ohms and then just a buffer to drive the phones.

So question for now is about headphone impedance. I'll post that seperate and see what others are using for phones.

Below is link to paper. it's the one about improved eliptic filters. I have the filters in switchercad just to see how impedance effects filter response.

I've been using walmart or cheap radio shack phones that my kids give
me. I don't think more expensive phones would do me any good cause I
just listen to talk radio and never music.
I've been using the kind with foam puffys. Maybe I will spend 25bucks
for a pair of the Sennheiser HD201. They are full sized. Check out
the expensive ones at the bottom of the page.

http://www.headphone.com/products/headphones/full-size/

So do you have a favorite headphone? Bose? Koss? Sennheiser?

regards,
NEO

Makes no sense to me. Why would a separate amplifier not have the same
problem as the output amplifier in the generator? The attenuators on
the generator outputs before the power combiner and the power combiner
itself (resistive type) are are supposed to provide the isolation of
the generator outputs.

Why is some additional amount of reverse isolation the amplifier
provides needed?

Yeah, I have not made any measurements on a mixer.

You mean solid state switches and step attenuators? Why are additional
amplifiers, attenuators, and filters needed for those?

> > It could be they are having reflections from the DUT screwing up

>
> No, I don't see your point.

Pretty simple point, it is my observation of RF test setups measuring
this, that, or the other people have created when having problems
making a measurement over many years time. It's not an inditement it
just raises my suspicions.

There has to be a reason that you use an amplifier to boost a signal
followed by attenuators to cut it back down. There has to be a reason
you think you need some additional amount of reverse isolation in the
fixture.

My guess is that the DUT input and output impedance is not a flat 50
ohms over the measurement range and the reflections play havoc with the
measurements. If that is the case then fix the DUT design not add junk
to the fixturing that needs to be calibrated out of the DUT
measurements.

The unity gain amplifier was just an example that I used because their
is no gain and it might be a reason amplification is needed somewhere

in the fixturing with the attenuation needed for isolation of the
generator outputs.

My work is mostly small signal so attenuators I use don't have fins but
ya got me why transverse cooling fins would make an IMD difference.

I pretty much did not like what I read there. Good company, good
products but that pdf left me desiring more explanation of some of
their conclusions.

Yeah, chambers of any type and vibration tables always add another
dimension of "fun" when the DUT is not making specifications and don't
you just love it when the problem turns out to be test equipment
instead of the DUT.

I don't care for debates, I'm interested in learning. You are right that I've never characterized a mixer so maybe you can explain the reason for the filters, attenuators and amplifiers in the test setup. I explained why I thought them unnecessary and I do not understand why they are necessary as a standard way of characterizing a mixer. Sure you can connect everything together without the DUT and characterize the fixturing. These measurements can either be a floor you can't measure below or ceiling you can't measure above on the DUT or used as a fixture compensation on the DUT measurement depending on the measurement type but generally fixture compensation is to be avoided unless necessary. It is a much better situation that the fixturing be transparent to the measurements.

I've been using walmart or cheap radio shack phones that my kids give
me. I don't think more expensive phones would do me any good cause I
just listen to talk radio and never music.
I've been using the kind with foam puffys. Maybe I will spend 25bucks
for a pair of the Sennheiser HD201. They are full sized. Check out
the expensive ones at the bottom of the page.

http://www.headphone.com/products/headphones/full-size/

So do you have a favorite headphone? Bose? Koss? Sennheiser?

regards,
NEO

I still have my TRIMM earphones which I bought new
in the mid-30's. VE7AFN.

DSB never has a carrier. There is no such thing as DSB and DSB without
a carrier, just DSB.

Think of a mixer. If the signal are zero mean, you get DSB. If there is
a DC offset on the modulating signal, you get AM.

>

Christ all mighty, what is with the verbal diarrhea? You are trying to analyze modulation by looking at demodulation. This is wrong thinking. You analyze modulation by looking at modulators.

AM:
One mixer. Feed it a carrier and signal. The carrier is zero mean. The signal has a DC bias sufficient that the signal always remains positive. Congrats, you gave birth to AM.
DSB:
One mixer: Feed it zero mean carrier and signal. Out pops DSB.
SSB:
Slightly more complicated since it involves Hilbert transformers and quadrature mixers. I can do an explanation, but it might take a paragraph.

My original comment still stands. The author of the paper confused AM and DSB.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast
bands used outside the USA. For multi-use bands, primary usage is shown.
Some stations operate outside official bands. Information is from Oct 2005
FCC rules and Jan 2006 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is
5 kHz. Frequencies above 10000 kHz tend to propagate better during the day;
frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

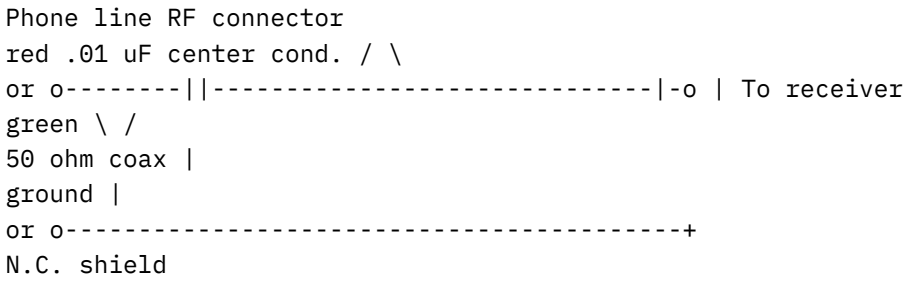
This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.



N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

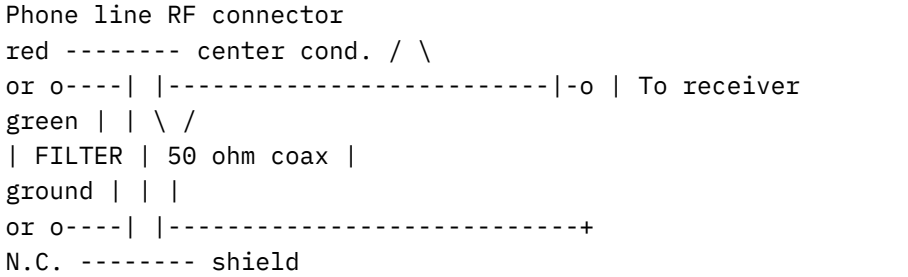
If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:



| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

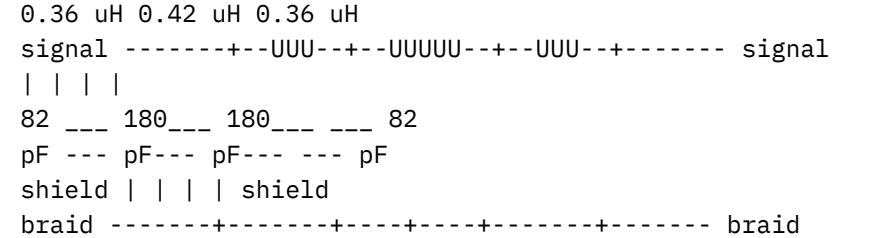
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH
instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there
are 4 lugs plus a grounded lug. All "ground" connections go to the lug
that is mounted to the chassis, and the other 4 lugs are used for each
of the connections on the signal line. One terminal strip is used per
filter. Since both filters were necessary to clean up the hash, I am
going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means
you can't possibly hook them up backwards. (In the above schematics,
left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast
bands used outside the USA. For multi-use bands, primary usage is shown.
Some stations operate outside official bands. Information is from Oct 2005
FCC rules and Jan 2006 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is
5 kHz. Frequencies above 10000 kHz tend to propagate better during the day;
frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

```
| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|
```

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

You don't have a life, look at the times you post, and you whine
because people don't post over a weekend, while you post all weekend.
Most people get up early, fatso, because they have to be at work, you
wouldn't know about that, since you mooch off your daddy and shemale
wife.

"woger" Markie shows off that he's been sucking his shemale wife's dick again! Or was it your daddy's?

You don't have rights, child raper! I didn't take sanything out of context, and stupid, I'm not a christian either. But kikes like you always take things out of context.

You need the therapy and and English Tutor. I suggest you go fuck yourself, and best keep your head down.

> all of these tools at our disposal.

Some of it is regional reception patterns, ax grinding, ignorance, and
some of it is just plain nut case thinking focusing on the negative
aspects because the sync circuit in radios are not perfect and ignoring
the good performance that results most of the time.

Listening to AMBCB in the car where I don't have a sync detector and
home where I do sure makes me wish I had it in the car. I'm not talking
about some small improvement I'm talking huge. Without sync you can
have a strong but completely unintelligible signal for a few seconds to
a few minutes a lot of the time in the evenings on any station not
right in town or more than 50 miles away or in other words most
stations. Usually the distortion is more like a few seconds length on
SW but whether you miss a few words or miss whole paragraphs of the
conversation it is very annoying.

It depends on conditions of course but when you have selective fading
turning on the sync detector makes an absolutely huge difference in
reception even with the Sony 7600 portable.

And of course if you have side band selectable sync detection with
another station or local noise source generating interference to one
side of a station you want to receive usually results in near 100%
rejection of the offender by selecting the opposite side band. It's as
close to a magic improvement in reception you are going to get on a

radio. Again this results in a huge non-arguable difference in reception quality.

The improvement in reception most radios have with sync detection is huge not small and so the improvement is not open to argument. People that argue about it are being stupid. People can write anything on Usenet or on a web page and a lot of it is crapola.

Usually it is an FTP server so you will need a program that uses that
protocol and I'm sure it will also be secure.

I have found Dallas' LP fitle to be a very usefull addition to my
system.
When I first posted a link to his filter I took some hits because some
people think that active is either easeier or better. An active fitler
would
clearly lend it self to easier adjustments. The active circuit at the
link I
posted has a slight advantage for those with radios will less then

ideal IF
filters. The 5KHz, 9KHz, and 10KHz notches will be very usefull. I
built a
set for my DX398 for use on mini-dxpeditions.

For normal adjsutments I like the Tone Tilt that I first experienced in
a Kiwa
MAP SAD.

One simple circuit for which I do not have a link is a "ear protector".
I listen with earphones a lot of the time. My wife is very supporting
but doesn't understand my fascination with utility reception. Nothing
worse then trying to dig out a weak signal, with the AF gain cranked
up,
and a loud static "pop" rolls in. Or even worse, another signal comes
on frequency.

OUCH!

My hearing has suffered enough and have no desire to damage them
any more!

So I built a device that consists of a series resistor, a pair of two
1N400X
wired as a clamp to limit the voltage to a maximum of ~1.4V. Since my
two choices of earhphones are a 40 year old set of Sennheiser HD424, 2K
each side, and a set of Byer's with ~600 Ohms each side. The Sennheiser
are of the "opne air" desing and I can wear them for hours.The Beyers
are
of the clsoe design and I were them when there is too much back ground
noise. They also have a built in boom mic so on those odd occasions I
actually use my ham gear, they are nice for hands free. A foot PTT or
VOX are very usefull.

The earphone protector has a Lo-Z to high Z (8:600 ohms) transformer,
but
it will work great with every radio I have tried it with without
thetransformer.
I use sereis resistors of 470 Ohms, and have a 1K pot across the diodes
to
allow the level to be adjusted. This pot is a screwdriver and even
though the
Beyers and the Sennheisers have over a 2:1 difference, the sound levels
are matched to within a few dB. I can't measure earphone output better
then
about +/- 2dB.

Terry

Sennheiser HD424
Beyer DT100
Sennheiser ?? Folding set desiged for use with an MP3 player,
they work well with the DX398 and my Rio Chiba I use during PT.

Sony Active Noise Canceling Sony(R) MDR-NC5 Noise-Canceling.
A friend loaned me a pair and it is an odd feeling to turn on the
earphones
and the background noise simply vanishes, or goes down by at least 20
to 30dB. I am still trying to decide if I like these. Time will tell I
guess.

It has been my expereince better earphones can help by not adding
unwanted coloration to the audio. Cheap ones "smear" the sound.

And yea, I know this sounds like I am pushing some sort of audio snake
oil. I still have a big problem with even thinking about "clean" audio
in a
SWL context. After all, the signal is pretty well mangled by the time
it
gets to our radios. For humour I like to browse some of the "high end"
audio
pages and laugh at the nonesense that people push. Burn in your CD,
amp,
speakers and Oxy free wire with a "white noise" source. They are almost
as funny as the TV series Jericho.

Ok on the phones. You had mentioned them in your email to me in September. You had also sent me a diagram of an op-amp with a pair of emitter followers that I could use to drive the filter. Like I said, I'm probably going to design the filter to run into a hundred or so ohms. I'll probably stick an op-amp on the output of the filter to act as a buffer - although 2k probably wouldn't move the filter response much. Then of course I'll have to have a baxandall /bandaxall style tone control so the project grows some. Yes, active filters would probably be ok and LT has some very nice filter chips that would work too - and I haven't ruled them out.

More later.

Before trying a baxandall /bandaxall tone circuit, you owe it to
yourself to
at least bread board the circuit at
<http://members.tripod.com/roymal/ReverbTone.htm>.

I like baxandall for "HiFi" audio but in 40+ years of SWL I have never
needed
to boast the highs, lows and mids seperately. I played with a
professional
1/3 octave EQ unit, that had variable shelving etc last winter and
except for
the complexity it had some minor advantages. But all in all the single
Tone-Tilt
won the test. A tuneable AF notch is a nice addition.

There have been times when I found a very sharp 60Hz notch filter to
very usefull with
older tube radios with less then perfect power supply filtering. These
days I mainly
operate radi from a well regulated and very well filtered 12V. [13.67V
which is
also the proper voltage to float charge a Gell Cell/PbSO4 battery] So
60/120/180
Hz hum is seldom an internal issue.

At some point I am going to have to redesign my system to seperate the
audio from the outboard detector. When I built it I didn't plan on

adding radio
that didn't have 455KHZ as the IF. Best laid plans and all of that.

There are paradoxes or logical conflicts in my statements and the operation
of my audio chain. I want smooth response out to say 15KHz. But I add
filtering to chop out the highs and lows. I found it better to use a set of JBL
speakers designed for "Home Theater" 5.1 (or 7.1) side speakers that naturally
roll off at about 6K. By 10KHz they are mute. I found this works better then
adding a low level AF filter. The Minimus 7's almost worked with the tweeter
switched off. Then when I get the harmonic distortion during bad fades with ths
SADs, I kick in Dalla's ELP AF filter. When an unwanted het pops up I use
a low level tuneable notch.

When I look at my system I sometimes want to scream. This was supposed to
be simple! I designed and built a true hifi system that is flat, +/1 <1dB from
~30Hz to above 20KHz. With the minimuis speakers and an added tweeter and
subwoofer it is flat +/- 4 or 5dB from 60Hz to above 15KHz. [It is very hard to come
up with accurate measurements that relfect reality in a room!] When doing serious,
IE money making, audio work on the PC I really need the full bandwidth with the
subwoofer. But for SWL I chop it to something like ~100Hz to maybe 7KHz.
Simply nuts. No wonder my wife insisted on her own radio.

Since my "far field"/ ISM/HiFer beacon is toast, lightning, I have to be content with
running my test audio from a high bit rate MP3 into my system and
mixing real radio background noise and measuring the result. Since I can't, and never could, really
duplicate any of the effedts sfading and selective fading introduced, this isn't really
that much different then my prior test. As a general rule, it is better to control BW
with the correct IF filter, a speaker with natural roll off or lastly low level or high
level filters. Conversly the more filtering you add, the quicker you get listening
fatigue. Listening to AM through a 1.8KHZ SSB fitler will tire you out pretty fast.

More later when my brain untangles.

And this is all for fun.

I use the Sennheiser HD580 headphones for DX'ing voice's. They are full range but DO NOT pump up the 300 -100 hz area like so many "HIFi" headphones.

I like the JRC ST-3 for CW. All midrange. No highs & only go down to maybe 90 hz ???

I also like the ST-3 during warmer weather when there are Lightning crashes. They seem to soften the crashes abit.

The Heil ProSet headphones sound really nice as well. They are not nuetral in Freq response as they seem to be "voiced" with the typical smilley face on a equalizer but do help readability on voices but not as well as the HD580's do.

I can hear KABC, plus another station and they fight with each other
and the KABC skywave.

KOMO 1000 is always there, almost like fringe groundwave. I think it
may be ducting along the coast.

There's a ''TIS'' station at UCLA on 810; more of a problem than the
Mexican.

Hi Terry -

Since you have a hard copy, this may not help that much, but perhaps in the future or for other items that were at this site that you don't have a copy of:

There is a website that has archived versions of many websites. It is called the Internet Archive Way Back Machine, and is located at:

http://www.archive.org/web/web.php

You put in the address of the site and if it has versions of it (in this case it has several) they are displayed for selection.

This can help on sites that are active as well. If you want to see something that is no longer there or see the previous version of something that has changed, it will sometimes be there in the archive.

Maybe this is something you already know, but if so, maybe it will be helpful to somebody else reading the thread...

Bob

Terry, that's a great story. Whereabouts in KY do
you live? I'm curious, since I-71 between Louisville
and Cincy is really getting built up.

Did Mr.Yuppy install that solar panel stuff himself? Seems to me any solar panel dealer/installer guy would have made sure it was installed and grounded properly.At any rate,tell Mr.Yuppy to send me some steaks too.

Cruelty to animals is one of the earliest and most reliable signs of criminal behaviour. Malicious posting is another. Obviously, the two can be combined.

If by MX you mean military (AFN), you could well be hearing 810 AFN on the
Kanto Plain in Japan at 50,000 watts.

www.devilfinder.com Canada cruelty to Animals

I just now stepped back in to my house from next door.I made sure that divorced woman's rabbit has plenty of food and water and I put some more straw/hay in the rabbit's little wooden rabbit house in that cage and I also gave her cat some cat food and water.I do that every day at about this time.I am not cruel to Animals.
